**A. As substantive:**  
1. Generally: Anything, whether great or small.

"Who digging, round the plant, still hangs his head,  
Nor *ought* retire the work, while thus he said."  
Pope: *Homer's Odyssey*, bk. xxiv., 295-4.

2. *Spec.*: The smallest portion of anything, a whit, a jot, or tittle.

**B. As adverb:** In anything, in any respect.  
"Thy sire and I were one: nor varied *ought*  
In public sentence, or in private thought."  
Pope: *Homer's Odyssey*, bk. iii., 155-4.

† *Aught*=anything, is sometimes erroneously spelled *ought*, and thus confounded with *ought*=should, or is under an obligation. It would tend to clearness if the former were uniformly spelled, as correctness requires, with *a*, and the latter with *o*.

**âught, âucht** (*gh* and *ch* guttural), *s.* [*AOHT*, *AUHT*.] Possession, property. (*Scott*.)

"Edle Ochiltree *auht* hold of the rein, and stopp'd his further proceeding. "Whu's *auht*, ye callist!"

\* **âught-whêre** (*gh* guttural), *s.* [Eng. *auht*; *whêre*.] Anywhere.  
"... that he had *auhtwhêre* a wife for his estate."  
—*Chaucer: Legend of Good Women*, 1.582. (*S. in Boucher*.)

**âu-gîte, âu-gite, s.** [In Ger. *augit*, &c. In Lat. *augites*; Gr. *αυγιτης* (*augitês*), a precious stone, supposed by some to be the turquoise; *αυγή* (*auge*)=bright light, radiance.] An important mineral, interesting from its geological as well as its mineralogical relations. The term has not always been used in the same sense.

1. Formerly: The *augite* of Werner was the same as what has been called volcanic schist and volcanicite.

2. Now: Dana applies the name *augite* to the greenish or brownish-black and black kinds of aluminous pyroxene, found chiefly in eruptive, but sometimes also in metamorphic rocks. [*PYROXENE*.] When altered into hornblende it is called *Tralite* (q.v.). *Augite* was once suspected by many mineralogists to be

essentially the same mineral as hornblende, differing only in this respect, that the former species resulted from rapid and the latter from slow cooling. But Dana separates the two, regarding hornblende as an aluminous variety of amphibole [*AMPHIBOLE*], and not of pyroxene. [*HORNBLLENDE*.] Whatever its exact place in the system, it is so much akin to hornblende that Gustav Rose, fusing a mass of the latter mineral, found that on cooling it uniformly became *augite*. Both are found in modern and in ancient volcanic products. The green and dark kinds of eruptive rock have hornblende or *augite* predominant, while the reddish ones owe their colour to the abundance of felspar in their composition. In Britain *augite* occurs separately as a mineral in the trap rocks around Edinburgh and elsewhere.

**augite-rock, s.** A kind of basalt, or greenstone, composed wholly or chiefly of granular *augite*. (*Leonhard, Lyell, &c.*)

**âu-git-ic, âu-git-ic, a.** [Eng. *augit(e)*; *-ic*.] Pertaining to *augite*, or composed in greater or lesser amount of *augite*.

"It was also remarked, that in the crystalline slags of furnaces, *augite* forms were frequent, the hornblende entirely absent; hence it was conjectured that hornblende might be the result of slow, and *augite* of rapid cooling."—*Lyell: Man. of Geol.*, 4th ed., p. 320.

**augitic porphyry.** A volcanic rock, consisting of Labrador feldspar and *augite* on a green or dark-grey base. (*Rose, Lyell, &c.*)

**âu-gmênt, v.t.** [In Fr. *augmenter*; Sp. & Port. *augmentar*; Ital. *augmentare*; from Lat. *augmento*, *-avi*, *-atum*, v.t.=to increase; *augere*, fut. *auzei*=to increase; Gr. *αυξάνω* (*auxano*), and *αύξω* (*auxo*)=to increase.] [See *WAX, EKE*.]

**A. Trans.**: To increase the size of anything; to make anything larger, in reality or to the imagination.

**âu-gmênt, s.** [In Fr. *augment*; Fr. *augment*; Port. *augmento*; Ital. *augmento*; Lat. *augmentum*, from *augere*=to increase.]

**A. Ordinary Language:**

1. The act of augmenting or increasing; the state of being augmented or increased.

2. That by which anything is increased; also the time during which increase takes place.

"You shall find this *augment* of the tree to be without the diminution of one drachm of the earth."  
—*Watson: Angler*.

"Disculents are improper in the beginning of inflammations, but proper when mixed with repellants in the *augment*."—*Wiseeman*.

**B. Technically:**

1. *Philol. & Gram.*: In Greek grammar, a prefix to the past tense and to the paoipost future, intended to distinguish them from other tenses. The augment to the perfect and the paoipost future prefix the initial consonant with *ε*, and retain the syllable thus formed through all the moods. In this case the augment is called the *reduplication*. Thus from *ῥίπτα* (*ruptô*) comes *τέρφα* (*telupha*), *τερύφω* (*telupomai*), where *τε* (*te*) is the augment. Constituting, as it does, a syllable, it is called a *syllabic augment*. Sometimes the augment is formed by substituting for a short vowel its corresponding long one, as *ἐλπίδω* (*elpidô*), *ἐλπίζω* (*elpidomai*); the augment thus produced is termed a *temporal augment*.

† Dr. Donaldson, in 1839, published the hypothesis that the augment is properly a pronominal particle, denoting distance or remoteness, originally in space and then in time; a view which has since been adopted by Bopp, Garnett, Curtius, and others. (*Donaldson: New Cratylus*, 3rd ed., 1859, p. 503, *Note*.) There is an augment in Sanscrit as well as in Greek.

**âu-gmênt-a-ble, a.** [Eng. *augment*; *-able*.] Able to be augmented; able to be increased.

"Our elixirs be *augmentable* infinitely."  
—*Ashmole: Theat. Chem.* (1682), p. 162.

[In Fr. *auréole*; Port. *auréola*; from Lat. *aurculus* = golden; *aurus* = golden; *aurum* = gold.] The circle of rays with which painters surround the head of Christ and the saints. Trench is in error when he says that this word is in none of the Dictionaries. It is in Webster, ed. 1848. The Archbishop says that the following citation from Donne should be inserted with it:—"Because in their translation, in the Vulgate edition of the Roman Catholic Church, they [the Roman Catholics] find in Exod. xxv. 25 that word *auréolam*. *Facies coronam auréolam*, 'Thou shalt make a lesser crown of gold;' out of this diminutive and mistaken word they have established a doctrine that, besides these *coronae auree*, those crowns of gold which are communicated to all the saints from the crown of Christ, some saints have made to themselves, and produced out of their own extraordinary merits, certain *auréolas*, certain lesser crowns of their own . . . And these *auréolas* they ascribe only to three sorts of persons—to Virgins, to Martyrs, to Doctors." (*Donne: Sermon*, 73.) (*Trench: On some Def. in our Eng. Dict.*, p. 42.)

**áun-ric, a.** [From Lat. *aurum* = gold, and Eng. suffix -ic.]

**A. Ordinary Language:** Of gold; having more or less of gold in its composition, or in any way pertaining to gold.

**B. Science generally:**

**Chem.:** With gold as one of its constituent elements. In *auric compounds* the gold is

trivalent, whilst in *aurous compounds* it is univalent. There are auric sulphides, chlorides, anoxides, bromides, and iodides. If alloys of gold be dissolved in nitromuriatic acid, and a ferrous salt be added, the pure metal will be precipitated. The chief tests for gold in solution are ferrous sulphate and what is called "purple of Cassius."

*Auric chloride* or *trichloride of gold* ( $AuCl_3$ ) is formed when gold is dissolved in nitromuriatic acid, forming a yellow solution. It crystallises with hydrochloric acid, which it gives off on heating, forming a red crystalline mass of  $AuCl_3$ . Auric chloride is very deliquescent, soluble in water, alcohol, and ether; it forms double salts, as  $NaCl, AuCl_3, 2H_2O$ , a double chloride of sodium and gold.

*Auric oxide* ( $Au_2O_3$ ) is obtained by adding magnesia to auric chloride, and digesting the precipitate with nitric acid. Auric oxide is a chestnut-brown powder, reduced to metallic gold by heat, or by exposure to light. Auric oxide is soluble in strong nitric acid, and easily dissolved by hydrochloric or hydrobromic acids. It is soluble in alkalis. By digesting it in ammonia it forms fulminating gold. Its salts, with alkalis, are called *aurates*.

*Auric sulphide* ( $Au_2S_3$ ) is formed when hydrogen sulphide ( $H_2S$ ) is passed into a cold dilute solution of auric chloride. It is yellow-brown, and is soluble in ammonium sulphida.

**áun-rí-chál-çite, s.** [From Lat. *aurichalcum*,

better spelled *orichalcum*; Gr. *ορείχαλκος* (*oreichalkos*) = yellow copper ore, also the brass made from it; *ορειος* (*oreios*) = mountainous; *ορος* (*oros*) = a mountain, and *χαλκος* (*chalkos*) = (1) copper, (2) bronze, (3) brass.] A mineral placed by Dana under the fourth section of his Hydrous Carbonates. It occurs in acicular crystals, forming drusy incrustations; also columnar, plumose, granular, or laminated. Its lustre is pearly; its colour, pale-green, or sometimes azure. The hardness is 2. The composition: Oxide of copper, 16.03 to 32.5; oxide of zinc, 52.02 to 56.82; carbonic acid, 14.08 to 24.09; water, 9.93 to 10.80; lime, 0 to 8.62. 2. **Auricles of the heart:** Those two of the four cavities of the heart which are much smaller than the others, and each of which, moreover, has falling down upon its external face a flattened appendage, like the ear of a dog, from which the name of the whole structure is derived. The right auricle has a communication with the right ventricle, and the left auricle with the left ventricle. The two auricles are irregular, cuboidal, muscular bags, separated from each other by a thin fleshy partition. The main portion of each consists of what is called the *sinus venosus*, into which the veins pour their blood. (*Todd & Bowman: Physiol. Anat.*, vol. II., p. 593, &c.)

"The morning planet told th' approach of light,  
And, fast behind, *Aurora*'s warmer ray  
O'er the broad ocean pour'd the golden day."  
*Pope: Homer's Iliad, bk. xxiii., 231-4.*

"His bosom of the bœe  
With which *Aurora* decks the skies,  
When piping winds shall soon arise  
To sweep away the dew."  
*Cowper: Death of Mrs. Throckmorton's Bullfinch.*

**2. Ord. Lang., Meteorol., &c.:** The generic term for that illumination of the night sky which is so common within the polar circles, and is called *Aurora borealis* or *A. australis*, according as it is seen near the North or near the South Pole. Even as far outside the arctic circle as London the phenomenon is not a rare one in winter; and when the sky over the metropolis is reddened by an aurora there is a difficulty in distinguishing it from the reflection of a great fire. Sometimes the light is of the ordinary flame colour; green has been more rarely observed. The shapes it assumes are infinite in number and very transient. Sometimes there is an arch, in which case it is placed at right angles to the magnetic meridian, showing its connection with magnetism. It affects electrical wires also: thus in France and elsewhere the aurora of August 30 and September 1, 1859, noiselessly worked the telegraphic needles and violently rung the alarm-bells. The aurora is believed to be produced by electric currents in the higher regions of the atmosphere. Its great elevation above the earth is evident from the fact that the same aurora has been witnessed at the same times in Moscow, Warsaw, Rome, and Cadiz.

**3. Bot.:** A species of *Ranunculus*.

auroa australis. [AURORA (B, 2.)]

auroa borealis. [In Fr. aurore boreale; Sp. auroa boreal.] [AURORA (B, 2.)]

au-ror-al, a. [Eng. aurora(a); -al.]

1. Pertaining to the dawn of day; roseate. "Her cheeks suffused with an auroral blush." Longfellow: The Student's Tale.

2. Pertaining to the Aurora borealis or to the A. australis, as an "auroral arch."

au-ro-tel-lu-r-ite, s. [Lat. aurum = gold; tellurium (Mod. Lat.), the metal so called (q.v.); and Eng. suff. -ite.] A mineral, the same as SYLVANITE (q.v.).

au-ro-us, a. [From Lat. aurum = gold.]

1. Ordinary Language: Full of gold; (more loosely) containing more or less of gold.

2. Chem.: With gold univalent in its composition.

The aurous compounds are of little importance. Aurous chloride (AuCl) is prepared by heating the auric chloride (Au<sup>3+</sup>Cl<sub>3</sub>) to 227°, till it ceases to give off chlorine. It is a yellowish mass, decomposed by water into metallic gold and auric chloride.

Aurous oxide is formed when caustic potash solution is poured on aurous chloride. It is a green powder, easily decomposed into metallic gold and auric oxide.

Aurous sulphide (Au<sub>2</sub>S) is a black-brown precipitate, formed when hydrogen sulphide is passed into a boiling solution of auric chloride. It is soluble in ammonium sulphide.

au-rum, s. [Lat. aurum, whence Fr. Gael., & Ir. or; Wel. & Corn. aur; Sp. & Ital. oro; Port. ouro, ouro. The root is aur, ur = to burn, which occurs also in Lat. uro, aurine ustum = to burn; Gr. αὔω (aúō) = to dry, to kindle a fire; Sansc. ush. Mahn suggests O. Prussian ausus; Lith. aukšas; Biscayan urrea = gold.]

Chem.: A triatomic metallic element. It may be monatomic in the aurous compounds, which are quickly decomposed into metallic gold and aurio salts. Symbol, Au; stonic weight, 197; specific gravity, 19.50; melting point, 1102°C. Gold is a soft yellow metal, ductile and malleable. It dissolves in nitromuriatic acid, and it is obtained pure by precipitation from its solution by a ferrous salt. [Gold.] The following are tests for aurum (gold) in solution. The sulphides are precipitated from acid solutions by H<sub>2</sub>S, and are soluble in ammonium sulphide. Ferrous sulphate (FeSO<sub>4</sub>) gives a brown precipitate, fusible by the blowpipe into a bead of metallic gold. Stannous chloride (SnCl<sub>2</sub>) gives a brownish-purple precipitate (Purple of Cassia). Oxalic acid slowly reduces gold to the metallic state. Potassium cyanide gives a yellow precipitate, soluble in excess. A piece of paper dipped in a solution of gold becomes purple on exposure to the light. All salts of gold are reduced to the metallic state by heat.

\*aurum fulminans. [Lat. (lit.) = fulminating gold; gold darting lightning.] An explosive compound made by dissolving gold in aqua regia, and precipitating it with salt of tartar. A very small quantity of it becomes capable, by a moderate heat, of giving a report like that of a pistol. (Quincy.)

"Some aurum fulminans the fabric shook." Garth: Dispensary, lll. 303.

\*aurum graphicum. [Lit. = graphic gold.]

Min.: An obsolete name for Sylvanite (q.v.).

aurum mosaicum, aurum musivum. [Lit. = Mosaic gold.]

Old Chem.: An old name for bisulphuret of tin. It is of a sparkling golden hue, and used as a pigment.

aurum paradoxum.

Min.: Lit., an old name for Tellurium (q.v.). (Dana.)

aus-cul-tā-tion, s. [In Ger. †auskultation; Fr. auscultation; Lat. auscultatio = (1) a listening to, (2) an obeying; ausculto = to hear with attention, to listen to. Probably from O. Lat. ausculo, ausculo, from auscula, an obsolete form of auricula = the external ear, the ear; auris = the ear.]

A. Ordinary Language: The act of listening to.

B. Med.: The art of discovering diseases within the body by means of the sense of hearing. Being carried out most efficiently by means of an instrument called a stethoscope, it is often called mediate auscultation. It is used to study the natural sounds produced within the body, especially the action of the lungs and heart, both in health and disease. Its operation can be facilitated by percussion of the surface. [STETHOSCOPE.]

"... the application of auscultation to the exploration of the sounds developed in the [the heart's] action." Todd & Bowman: Physiol. Anat., l. 29.

aus-cul-tā-tōr, s. [Lat. auscultator = one who hears or listens.] A person who practises auscultation.

†aus-pī-cāte, v.t. [From Lat. auspiciatus, perf. par. of auspicio = (1) to take the auspices; (2) to make a beginning; or from auspiciatum, sup. of auspiciatus, pa. par. of auspicio, with the same meaning.]

1. To augur from certain circumstances that an event about to take place will be a happy one, or an enterprise to be commenced will have a favourable issue.

"Long may 't' thus live, and see me thus appear, As omnibus a const. from my sphere, Unto thy reign; as that did auspice So lasting glory to Augustus' state." B. Jonson: Part of K. James's Entertainment.

2. To make a favourable beginning of an enterprise, or simply to commence it.

"The day of the week which King James observed to auspice his great affair." Haecet: Life of Archbishop Williams (1693), p. 175.

A. Of things: 1. Lit. Among the Romans: Omens, especially those drawn from the flight or other movements of birds, or less properly, from the occurrence of lightning or thunder in particular parts of the sky. These were supposed to be indications of the will of Heaven, and to reveal futurity. At first only the augurs took the auspices [AUCURS], but after a time civil officers, discharging important functions, had the right of doing so. Two kinds of auspices, however, arose—a greater and a lesser; the former reserved to dictators, consuls, censors, praetors, or the commander-in-chief in war; the latter permitted to less exalted functionaries. In the long struggle which the plebeians carried on against the patricians for permission to share in political power, one chief argument used by the opponents of change was, the impossibility that a plebeian could take the auspices; but when, in B.C. 307, the flinging open of the augural college to all classes permitted him to try the experiment, it was found that he did the work as effectively (not to say as ineffectively) as any patrician whatever. The glory of a successful enterprise was universally assigned to the person who took the auspices, and not to the leader of the enterprise itself; hence the phrase

Or (b) from a king or queen supposed to call down blessing from heaven.

"If [the armada] was so great, Yet by the auspice of Eliza beat." B. Jonson: Masques at Court.

(c) From the directors of an enterprise, who, though probably not themselves present with those engaged in executing it, are still sending them support, counsel, and aid of various kinds. Thus when a national army is fighting in some foreign land, it is doing so "under the auspices" nominally of the Executive, really of the Home Government, if not even of the nation itself; and a missionary goes abroad "under the auspices" of the society or church which pays his salary and gives him more or less specific directions how to act. When success is achieved, those who directed the enterprise from home are contented to claim, as in fairness belongs to them, part of the glory; the modern angur or other dignitary, unlike the Roman one, has not the effrontery to appropriate the whole.

¶ The sing. auspice is now all but obsolete in this first sense; the pl. is frequently used.

†B. Of persons: Persons who went through certain ceremonies when a marriage took place, not forgetting to wish good luck or happiness to the wedded pair.

To *austerity* is opposed *effeminacy*; to *severity*, *relaxation*; to *rigour*, *clemency*. They are so low in organisation that it is said they can count only 3, 4, and 5; though some who have taught them have given a much more favourable opinion of their capacity.

**II. Technically:**

1. *Christian Apologetics, Historical Criticism, &c.* Writers on the evidences of Christianity have had to define the words *genuine* and *authentic*, and have increased rather than diminished the obscurity attending on the subject. Thus Bishop Watson says, "A *genuine* book is that which was written by the person whose name it bears as the author of it. An *authentic* book is that which relates matters of fact as they really happened." (*Watson: Apology for the Bible*, Letter ii.) Some other writers, adverting to the fact that the words *author* and *authentic* are etymologically connected, call that *genuine* which which terms *authentic*, and that *authentic* which he denominates *genuine*. It would tend to clearness if all Christian apologists would in future adopt this latter use of the word. At present each author has to define the sense in which he individually employs it in his writings.

Authorized Version of the Bible, or simply Authorized Version. The version of the Bible into English, made at the suggestion of James I. by forty-seven learned divines. It took three years—viz., from 1607 to 1610—to execute, and was first published in 1611. It is the only one appointed to be read in churches, and till quite recently its title-page contained the words "printed by authority." It has held its place so long more by its own great merits than by the artificial support of law; and while there are numerous minute defects, which have been corrected in the Revised Version of the New Testament, it remains, in all essential respects, the same Bible which for very nearly three centuries has been the most potent factor in the spiritual education of the English-speaking race.

a-vëng-ë, \* a-nëng-ë (u = v), v.t. [From O. Fr. avengier, vengier, vangier, vanger; Mod. Fr. venger; Prov. vengar, venjar; Sp. vengar; Port. vingar; Ital. vengiare, vendicare; Lat. vindicare = to avenge, to vindicta; vindex = (1) a claimant, (2) a punisher, an avenger.] To make a return, or take satisfaction for a wrong by inflicting punishment of some kind or other on the offender.

L. Gen.: Formerly it was often used, as it since sometimes is, to imply simply the return of pain for real or imagined injury, without its being decided whether the retribution is legitimate or the reverse.

" He had avenged himself on them by havoc such as England had never before seen."—Macaulay: Hist. Eng., ch. vii.

2. But now it is generally confined to cases of punishment for injury in which the retribution is legitimate in character and not disproportioned to the offence; the word revenge being used in cases of another character.

¶ (a) Sometimes the object of the verb is the offences for which retribution is inflicted, followed by upon or on applied to the persons punished.

" . . . I will avenge the blood of Jezreel upon the house of Jehu. . ."—Hosea I. 4.

Formerly it was sometimes used instead of on or upon.

" . . . and avenge me of mine enemies."—Isa. I. 24.

(b) Sometimes in place of the offence standing as the object of the verb, it is followed by for.

" . . . such are the practices by which keen and restless spirits have too often avenged themselves for the humiliation of dependence."—Macaulay: Hist. Eng., ch. xiv.

(c) The word is often used reciprocally, the person inflicting punishment for wrong being at once the subject and the object of the verb.

" . . . avenging myself with my own hand."—1 Sam. xxv. 23.

(*Tauchnitz: Dan. Dict.*) Wedgwood derives this group of words from Dan. *hof* = a court residence or palace, and believes that in this direction the etymology of Eng. *averages* (1) should be sought. The derivation generally given is from Low Lat. *averagium* and *averia*, in the sense of a portion of work done by animals of burden; also a charge upon carriages. So, also, the heriot formerly paid to the lord of a manor on the death of a tenant was the best live beast, or *averium*, which the deceased tenant had possessed.] [AVER (2).]

Santa Rosa and Marsh derive this from Turk. *avaría* = aid, a government exaction in the Levant; but Wedgwood considers it to be from Arab. *āwar* = a defect or flaw.]

**A. As substantive:**

**I. Ordinary Languages:**

\*1. Formerly: The apportionment of losses by sea or elsewhere in just proportions among different individuals concerned. [A., II. 1.] From this the second sense of the word gradually arose.

2. Now: The medium or mean proportion between certain given quantities. It is ascertained by adding all the quantities together and dividing their sum by the number of them. For instance, to ascertain the average income of a number of parochial clergy, their several incomes must all be added together, and the sum total be divided by the number of clergymen. The more that the extremes vary, the less possible is it to reason out any individual case from a study of the average. Thus the knowledge of the average age at which people die in America affords no aid whatever towards discovering when any particular person will die, for some do so almost at the moment of birth, and others linger on for nearly, it not even quite, a hundred years. But for finding out general laws, the study of averages is of immense value. The average of quantities is ascertained in a similar way to that of quantities.

"... and the average of intellect and knowledge was higher among them than among their order generally."—Macaulay: *Hist. Eng.*, ch. xi.  
"Including the period of the kings, the first decade has an average of forty-six years to each book."—Leavis: *Early Rom. Lit.*, ch. ii, § 3.

¶ On an average: When an average is taken.

**II. Technically:**

**1. Law, Nautical and Commercial:**

(a) *Average, or general average*: A contribution made by merchants proportionally to the value of the goods which each has on board a particular vessel, to meet the loss which arises when in a storm the goods of one have had to be cast overboard to lighten the ship.

"This contribution seems so called because it is so proportioned after the rate of every man's average, or goods carried."—Cowell.

(b) *Particular average*: The sum required to make good any fortuitous injury to the goods belonging to one person. It falls on him or on his insurers.

(c) *Petty average*: An estimate of the probable aggregate amount of various petty charges, as for harbour dues, pilotage, &c., which the captain of a vessel must in the first instance pay, but which, of course, do not fall on him ultimately. Formerly they were often met, as they still are, by agreement between the owners of the vessel and those to whom the goods sent in it belong. Hence in bills of lading the words occur, "paying so much freight, with primage and average accustomed."

2. *Corn-trade averages*: The medium price of grain in the leading markets.

**B. As adjective:** Ascertained by taking a medium or mean proportion between given quantities.

1. Go away, begone, be off, start off!

"Her enormous dread, brooks no delay; Stretch to the race—away! away!" Scott: *Lady of the Lake*, III. 21.

2. Come away!

"Away, old man; give me thy hand; away! King Lear hath lost, he and his daughter ta'en." Shakspeare: *K. Lear*, v. 1.

"Shallow, the never could away with me." *Palmer*. Never, never; she would always say she could not abide Master Shallow."—*Shakspeare*: *Henry IV.*, III. 2.

Regarding the distinction between awe, reverence, and dread, Crabbe considers that awe and reverence both denote a strong sentiment of respect, mingled with a certain measure of fear, but the former is the stronger of the two; whilst dread is unmingled fear for one's personal security. Sublime, sacred, and solemn objects awaken awe, exalted and noble ones produce reverence, and terrific ones dread. 2. Gen.: A self-evident principle in any department of thought, or, more loosely, one which, though requiring proof, is considered to rest on irrefragable evidence.

- A. As substantive:
I. Ordinary Language. (Essentially a scientific word, though in some of its technical significations it has made way into ordinary language.)
1. A straight line, real or imaginary, passing through a body, and around which that body revolves, or at least may revolve. Spec., the imaginary line connecting the poles of a planet, and around which the planet rotates. [11. Astron.] (Lit. & fig.)
(1) Literally:
"On their own axis as the planets run,
And make at once their circles round the sun."
Pope: Essay on Man, 513.
(2) Figuratively:
"Meanwhile, the heart within the heart, the seat
Where peace and happy consciousness should dwell,
On its own axis restlessly revolves,
Yet nowhere finds the cheering light of truth."
Wordsworth: Excursion, bk. iv.
2. A straight line, real or imaginary, passing through a body, around which the several parts of the body are symmetrically arranged.

"The lofty mountains on the north side compose the granitic axis, or backbone of the country." -Darwin: Voyage round the World, ch. x.

II. Technically:

1. Geom.: An imaginary line drawn through a plane figure, and about which the plane figure is supposed to revolve, with the result of defining the limits of a solid. Thus, a circle revolving about one of its diameters, and at right angles to that diameter, will constitute a sphere; hence the axis of a sphere is any one of its diameters. If an isosceles triangle revolve around an imaginary line connecting its apex with the centre of its base, it will constitute a cone; hence the axis of a cone is an imaginary straight line drawn from its apex to the centre of its base. A rectangle revolving around a straight line connecting the centres of any two of the opposite sides will produce a cylinder; hence the axis of a cylinder is a straight line drawn from the centre of its apex to the centre of its base. The axis of a parabola is the diameter which passes through its focus. For the abscissa of the axis, the subtangent, &c., of the axis, see ABSCISSA, SUBTANGENT, &c. In an ellipse the axis major (Lat. = greater axis) is the diameter which passes through the foci; and the axis minor (Lat. = lesser axis) the diameter at right angles to the axis major. In a hyperbola, the axis major is the diameter which passes through the foci; the axis minor is the distance between two points formed when a straight line drawn through the centre of the hyperbola, and at right angles to its major axis, is intersected by a circle described around a principal vertex as its centre, and with a radius equal to the eccentricity of the hyperbola.

Conjugate axis of an ellipse or of a hyperbola: The straight line drawn through its centre perpendicular to the transverse axis.

Transverse axis of an ellipse or of a hyperbola: The straight line drawn through the two foci.

The axis of symmetry of a body: Any line in a regular polygon bisecting an angle or bisecting a side perpendicularly.

"... a rotation of a body of regular figure about its axis of symmetry." -Herschel: Astron. (6th ed., 1838), § 64.

2. Astron. The axis of the earth, or the axis of rotation of the earth, in that diameter about which it revolves. It is the one which has for its extremities the north and south poles. The term is similarly used of the sun, the moon, and the planets. (Herschel: Astron., 3rd ed., 1838, §§ 22, 57, &c.)

"... both Venus and Mercury have been concluded to revolve on their axes in about the same time as the Earth." -Herschel: Astron. (6th ed., 1838), § 609.

Axis of the celestial sphere: The imaginary line around which the heavens appear to revolve. It is the axis of the earth produced.

Axis of an orbit: The major axis of the orbit of a planet is the line joining the aphelion and perihelion points. The minor axis is the line perpendicular to the former, and passing through the centre of the ellipse.

3. Min. The term axis of a prismatic or other crystal is used in the same sense as in Geometry. (Phillips: Mineral., 2nd ed., 1819, p. lxxxiii.)

4. Mechanics:
The axis of suspension of a pendulum is the point from which it is suspended, and consequently around which it turns.

The axis of oscillation of a compound pendulum is an axis constituted by a series of points, so situated that their motion is neither retarded nor accelerated by their constituting part of a solid body, which, of course, can only move together. (Atkinson: Ganot's Physics, 3rd ed., 1868, § 70.)

Axis of a balance: The line around which it turns.

Axis in peritrochio. [Gr. περί (peri) = round about, and τροχός (trochos) = a wheel.] The same as the wheel and axle. One of the six mechanical powers, consisting of a peritrochium, or wheel and an axle.

5. Magnetism: The line supposed to connect the north and south poles of a magnet.

6. Optics:
Axis of a lens: A line passing through the centre of its curved, and perpendicular to its plane, surface. (Brewster: Optics, 1831, § 34.)

Optic axis: The line corresponding to this in the eye. The ray of light passing along it is the only one which is not refracted. The other rays of light entering the eye have axes also, but this is the only one to which the term optic axis is applied.

ból, bóy; pout, jówl; cat, cell, chorus, chin, bench; go, gem; thin, this; sin, as; expect, Xenophon, exist. -ing. -cian, -tian = shan. -tion, -sion = shün; -tion, -sion = zhün. -tious, -sious, -cious = shüs. -ble, -dle, &c. = bel, del.

Visual axes: The axes of the several rays of light which enter the eye. [See Optic Axis above.]

... due convergence of the visual axes. . . —Herbert Spencer: Psychol., 2nd ed., vol. II., p. 170, § 327.

Axis of refraction: A straight line drawn perpendicular to the plane of a transparent body, and passing through the point of incidence of a luminous ray, striking it from without.

Axis of double refraction: All doubly refracting substances have one or more lines, or one or more planes, along which no doubly refracting force exists. If there is one such line or plane, then the body is said to have one axis, or plane of axes, of double refraction; if two, two axes, or planes of axes, of double refraction, and so forth. A real axis, or plane of axes of double refraction, is one in which the doubly refracting force really does not exist; whilst a resultant axis, or plane of axes, or an axis or plane of compensation, is one in which it exists, but is neutralised by a counter force of equal intensity. A positive axis of double refraction is the term used when the refracted ray is bent towards the axes, or plane of axes, of the body; and a negative axis of double refraction is the expression employed when it is bent in the contrary direction.

7. Architecture:

Spiral axis: The axis of a spirally-twisted column.

Axis of an Ionic capital: A line passing perpendicularly through the middle of the eye of the volute.

8. Geology: An imaginary line on the opposite sides of which the strata dip in different directions. If the angle formed at their point of junction be a salient one, they form an anticlinal axis, or ANTICLINAL (q.v.); but if it is a re-entering one, then they constitute a synclinal axis, or SYNCLINAL (q.v.). [Jell: Man. of Geol., 4th ed., 1852, p. 57.] [I., 2.]

9. Botany: The axis is that part of a plant around which the organs are symmetrically arranged. The ascending axis means the stem. (Lindley: Introd. to Bot., 3rd ed., 1839, p. 69.) The descending axis is the root. (Ibid., p. 69.) Necessary axes are axes in addition to the main one, found in the stems of Calycanthus, Chimonanthus, and some other plants. (Ibid., p. 96.) The appendages of the axis are scales, leaves, bracts, flowers, sexes, and fruit. (Ibid., p. 110.) The axis of inflorescence is a peduncle which proceeds in a nearly straight line from the base to the apex of the inflorescence. (Ibid., p. 153.)

10. Anatomy:

(a) The axis of the body: The vertebral column around which the other portions of the frame are arranged.

"When the skull remains in connection with the vertebral column, it will be seen that its axis is a continuation forwards of the axis of that column, consisting of the bodies of the vertebrae." —Foster: Osteol. of the Mammalia, p. 96.

"In the Deer the axis of the face is nearly in the same line with that of the cranium. . ." —Ibid., p. 171.

"The bones of the Cranio-facial Axis. . ." —Ibid., p. 105.

(b) The second vertebra of the neck, or the joint by which it is connected with the first vertebra. [ATLAS.]

**azelaic acid,** s.

**Chem.**: C<sub>7</sub>H<sub>14</sub>(CO.OH)<sub>2</sub>. A dibasic acid formed along with suberic acid by oxidizing castor oil. It is soluble in cold ether and in boiling water. It forms large white needle crystals, which melt at 166°. By heating with basic baryta, it yields heptane, C<sub>7</sub>H<sub>16</sub>.

\* **A-zēl-fa-fāge,** s. [Corrupted Arabic.] A fixed star, numbered 43 in the scale of magnitude; it is called also α<sup>3</sup> Cygni.

\* **āz-ī-mūth,** s. [In Dut., Ger., & Sp. *azimuth*; Fr. & Port. *azimut*; Ital. *azimutto*; from Arab. *assamt*, pl. *as-sumūt* = a way, a path.] [ZENITH.]

**Astronomy:**

1. *Sing.*: "The angular distance of a celestial object from the north or south point of the horizon (according as it is the north or south pole which is elevated), when the object is referred to the horizon by a vertical circle." Or "the angle comprised between two vertical planes, one passing through the elevated pole, the other through the object." It is generally reckoned eastward or westward, from the north or south point for 180° either way; but Herchel prefers always reckoning it from the points of the horizon most remote from the elevated pole westward, so as to agree in its general direction with the apparent diurnal motion of the stars. Of course he therefore counts from 0° to 360°. (Herchel: *Astron.*, 5th ed., 1858, § 103.)

2. *Plural*: Azimuths, called also *vertical circles*, are great circles intersecting each other in the zenith and nadir, and cutting the horizon at right angles in all the points thereof. On these are reckoned the altitude of the stars, and of the sun when he is not in the meridian.

† **Magnetical Azimuth**: Magnetical azimuth is an arch of the horizon, contained between the sun's azimuth circle and the magnetical meridian; or it is the apparent distance of the sun from the north or south point of the compass.

**azimuth and altitude instrument.** An astronomical instrument designed to ascertain the altitudes and azimuths of the heavenly bodies at any particular time. It has two axes, the principal one vertical and the other horizontal; the former, therefore, corresponding to a vertical circle of the heavens, and the latter to the celestial horizon. The angles measured on the latter are therefore azimuths or differences of azimuth, and those on the former zenith distances, according as the graduation is from the upper point of the limb, or a point distant from it 90°. (Herchel: *Astron.*, §§ 182—187.) [ALTAZIMUTH.]

**azimuth compass.** An instrument used for finding the sun's magnetical azimuth, or the amplitude of any other heavenly body.

**azimuth dial.** A dial, the stila or gnomon of which is at right angles to the plane of the horizon.

\* **āz-ī-mūth-al,** a. [Eng. &c., *azimuth*, and Eng. suffix *-al*. In Fr. and Port. *azimutal*; Sp. *azimutal*.] Pertaining to the azimuth.

" . . . the *azimutal* arc thus determined." —Herchel: *Astron.*, § 188.

**azimuthal error.** The deviation of a transit instrument from the plane of the meridian. Its effect is greatest in the horizon, and vanishes in the zenith. It is sometimes called the "meridian error." (Hind.)

\* **āz-ō-bēn-zēne,** s. [From Eng. *azo(te)* = nitrogen, and *benzene* (q.v.).]

**Chemistry:** C<sub>6</sub>H<sub>5</sub>N. Obtained by distilling

nitrobenzene with an alcoholic solution of potash. The alcohol is oxidized to aldehyde. Azobenzene can be obtained by the action of sodium amalgam and water on an alcoholic solution of nitrobenzene. Azobenzene crystallises in large yellow-red plates, which melt at 66.5°, and boil at 293°. Concentrated nitric acid converts it into nitro-substitution compounds. Boiling sulphuric acid converts it into azobenzene-sulphonic acid, C<sub>12</sub>H<sub>9</sub>N<sub>2</sub>SO<sub>3</sub>H. Reducing agents convert azobenzene into hydrazobenzene, C<sub>6</sub>H<sub>5</sub>NH-NH<sub>2</sub>.

\* **āz-ō-bēn-zō-īc,** a. [Eng. *azo(te)*, and *benzole* (see def.).] Pertaining to nitrogen, and also to gum benzoin, a resin produced from *Styrax benzoin*, a tree from the Malys archipelago.

**azobenzole acid.**

**Chem.**: NC<sub>6</sub>H<sub>4</sub>.CO.OH. Obtained by the

action of sodium amalgam and water on nitrobenzoic acid. A yellow solid, almost insoluble in alcohol, ether, or water; it forms sparingly soluble salts.

*Geology.* *Azoic Rocks*: Those in which no traces of organic remains exist, and which are by some assumed to have been deposited before life commenced in this planet.

¶ As the constant tendency of geological investigation has been to find traces of fossils in sedimentary rocks previously deemed azoic, and as, moreover, there is good reason to believe that in many cases in which they have not been found they once existed, but have since been destroyed by metamorphic action, students of nature require to be very careful as to what rocks they venture to characterise as azoic.

**āz-ō-mē-than**, *s.* [From Eng. *azo(ite)* = nitrogen, and *methan* (q.v.).]

*Chem.* [CYANIDE.]

**āz-ōr-īte**, *s.* [From the Azores, nine islands in the North Atlantic, about 800 miles distant from Portugal, to which they politically belong.] A white mineral, translucent or opaque, crystallising in minute octahedrons. The hardness is 4.45; the lustre vitreous on a fractured fragment. Hæyca considers it carbonate of lime. It is found in an albitic rock in the Azores.

**ā-zō-īc**, *s.* [In Fr. *azote*; from Gr. *ἀ*, *priv.*, and *ζωικός* (*zōikos*) = fit for giving and maintaining life; *ζωή* (*zōē*) = *life*; *ζωά* (*zōā*) = *to live*.] A name once all but universally used for what is now more frequently termed nitrogen. "... those of azotized matters, whether animal or vegetable."—*Todd & Bowman's Physiol. Anat.*, l. 13.

"... various azotized substances."—*Ibid.*, vol. II, p. 202.

**azotized substances.** Nitrogenous compounds, or those containing nitrogen, the most essential element of food, yet, by itself, unable to sustain life. Foods, which build up the bodies of men and animals, are divided into two great classes, viz.—*flesh-formers*, or those which repair the waste of tissues; and *heat-generators*, or those which keep up the heat and movements of the body. The former are called nitrogenous, and the latter non-nitrogenous or carbonaceous. The principal animal nitrogenous compounds are albumen, fibrin, gelatine, and casein, all of which are almost identical in composition, and contain from 16 to 18 per cent. of nitrogen. Albumen, fibrin, and gelatine are found in the muscles,

blood, and bones of animals, whilst casein is found in the milk. Similar nitrogenous compounds occur in vegetables; thus we find albumen in potatoes, turnips, apples, &c.; fibrin in wheat, barley, and the other cereals; and casein in peas, beans, and lentils. The nutritive value of an infusion of tea or coffee is very small, the amount of nitrogen present being almost inappreciable. The non-nitrogenous foods are sugar, starch, and fat or oil. These, by oxidation in the body, produce heat and motion, and are hence termed heat-givers or force-producers.

**āz-ō-tīz-īng**, *pr. par.* [AZOTIZE, v.]

B.

**B.** The second letter and the first consonant in the English alphabet, as it is also in the other languages of the Aryan family spoken in Europe. The characters in use in these several tongues having come through the Greek from some old form of speech, probably the Phœnician, belonging to the Semitic (better called the Syro-Arabian) family, it was to be expected that the letter corresponding to B would occupy the same place in the Semitic as in the previously-mentioned Aryan alphabets. Investigation shows this to be the case, to a considerable extent at least. A sound and character corresponding to the English B and the Greek β (= beta), is the second letter and the first consonant in Phœnician, Hebrew, Samaritan, Aramaic, Arabic, and Coptic. In Ethiopic, however, *bet* stands tenth instead of second in order. Turning next to some of the Aryan languages of Asia, we find that in Armenian *be* is the twenty-sixth of thirty-eight letters; and in Sanscrit, Maharrta, &c., *bū* or *bā* is generally placed twenty-third in the list of consonants, where it is preceded by *phū* and followed by *bhū*. Returning again to the Semitic, *Ḳ* (*bet*), the name given to the second letter of the Hebrew alphabet, is really Aramaean. Like the corresponding word in Hebrew, *Ḳ* (*bet*), it signifies a *house*, to which it has some faint resemblance. The Hebrew coin-letter **ב**, the Samaritan **𐤁**, and the Phœnician **𐤁**, has a somewhat greater *os*; and probably the old hieroglyph from which these symbols were abbreviated may have been the most like of all. [A. ALPHABET.]

B is a flat mute [MUTE], the voice not being so entirely shut off in pronouncing it as it is when *os* of the sharp mutes, *p* or *f*, is uttered. The *b* sound is produced by compressing the lips, a vowel being added to render it audible. It is hence called a labial, from Lat. *labium* = a lip, plur. *labia* = lips; its other associates in the same category being *p*, *f*, and *v*, with which it is often interchanged in the cognate languages. Thus to *baks* is in O. H. Ger. *bachan*, and in Slav. *peshtsh*. The Eng. *life* is the Ger. *leben*; and while *life* is the substantive, *live* is the verb. So the Lat. *balœna* is from the Gr. *φάλαίνα* (*phalaína*), *phalaína* (*phalaína*) with *ph* pronounced as *f*, whilst from one or other comes the Eng. *whale*. The Eng. *habe* is from the Lat. *habeo*. So also the Sanscrit *vyagra* = a tiger, becomes the Maharrta *vagh* (pronounced *wagh*), and is transformed into the Hindi *bagh*. Other letters than the labials can be interchanged with *b*: thus the Greek *μολύβδος* (*molubdos*) and the Lat. *plumbum* = lead, unlike as they appear, are akin, *m* being exchanged for *p*; and the old form of the Lat. *bellum* = war, was *duellum*, whence our Eng. words *bellicose* and *duel*.

- I. B, as an initial, is used—
  1. In designating University degrees:
    - (a) For Lat. *Baccalaureus*, as *Artium Baccalaureus* = Bachelor of Arts.
    - (b) For *Bachelor*; as B.A. = Bachelor of Arts; B.D. = Bachelor of Divinity; B.M. = Bachelor of Medicine; B.L. = Bachelor of Laws.
  2. In Music: For *basso*. Similarly B.C. is used for *basso continuo* = thorough bass.
  3. In Chemistry: For the element boron, of which it is the symbol as well as the initial.
- II. B, as a symbol, is used—
  1. In Numeration, in Greek, Hebrew, Arabic, and even occasionally in English, for 2. But β in Greek is the diacritical mark for 2,000. In Latin B stands for 300, and B̄ for 3,000.
  2. In Music: As the seventh note of the diatonic scale. It answers to the Italian and French *si*. In Germany it is = B flat.
  3. In Chem. [I., 3.]
  4. Biblical Criticism. Of Codices: B = the Codex Vaticanus. [CODEX.]
- III. B, as a part of speech, is used—
  1. As an adjective: as "the *b* sound."
  2. As a substantive: as "Capital B;" "Not to know a B from a bull's foot."

**Bā'-al**, *s.* [In Ger., &c., *Baal*; Gael. *Bell*; from Hebrew **בַּל** (*Baal*): Aram. **בַּל** (*Baal*), and **בַּל** (*Bēl*) = (1) master, possessor, (2) husband (generally with the article **א** (*ha*) = the, **בַּלְאֵל** (*hab-Baal*) = Baal; in Sept. Gr. **Βάαλ** (*ho Baal*) = the Baal (masc.) (Judg. ii. 18); **ἡ Βάαλ** (*hē Baal*) = the Baal (fem.) (Jer. xix. 5).]

1. *Lit.*: The chief male divinity among the Phœnicians, as Ashoreth was the leading female one. [ASHORETH.] The Carthaginians, who sprang from the Phœnicians, carried with them his worship to their new settlements, as is proved, among other evidences, by the names of some of their world-renowned heroes; thus Hannibal, written in Punic inscriptions **חַנְנִיבַל** (*Hannibal*), signifies "The grace of Baal," and Hasdrubal, or Asdrubal, **אַשְׁרֻבַל** (*Ashrubal*) = "Help of Baal." The worship of Baal early existed among the Canaanites and the Moabites, whence it spread to the Israelites, becoming at last for a time completely dominant among the ten tribes, and to a certain extent even among the two, in consequence of the ill-advised marriage of Ahab with Jezabel, daughter of Ethbaal (the name means "With Baal,") King of Sidon. A number of places in Palestine and the neighbouring countries commence with *Baal*, such as Baal-gad (Josh. xl. 17), Baal-meon (Numb. xxxii. 38), but whether in the sense of "lord," "possessor," or signifying "Baal," is a matter of dispute. One place is simply called Baal (1 Chron. iv. 33). This divinity seems to have symbolised the sun, and less frequently the planet Jupiter. He was worshipped under different forms or in different relations: thus there were Baal-berith = the Covenant Baal or lord; Baal-zebub [BEELZEBUB] = the fly-lord; Baal Peor = the Baal of Mount Peor, or Baal of the opening, the Moabitish national divinity. Perhaps the Babylonian *Bel* was only Baal with a dialectic difference of spelling, though Prof. Rawlinson thinks differently (Isa. xvi. 1). [BEL.] There was an affinity between Baal and Moloch. [MOLOCH.] The Beltein or Beltane fires, lit in early summer in Scotland and Ireland, seem to be a survival of Baal's worship. [BELTANE.] "... and called on the name of Baal from morning even until noon, saying, O Baal, hear us."—1 Kings xviii. 26. (See also Jer. xix. 5.)

¶ The Heb. plural *Baalim* often occurs. It may signify images of Baal, or that imaginary god in different relations. (Judges viii. 33.)

2. *Fig.*: Any one held by the person using the term to be a false priest.

"The priest of Baal was reviled and insulted, sometimes beaten, sometimes ducked."—Macaulay: Hist. Eng., ch. xlii.

**Baal-adorer**, *s.* One who adores Baal. "The Baal-adorer bows on Sinal's steep." Byron: On Jordan's Banks.

**Bā'-al-ist**, *s.* [Eng., &c. *Baal*; -ist.] A worshipper of Baal; a contemptuous epithet applied to a Roman Catholic or to an Anglican. (Sylvester: Tobacco Battered, 190.)

**bāb**, *s.* [BOB, *s.* (Scotch.)]

**bāb**, *v.t. & i.* [BOB, *v.* (Scotch.)]

**ba'-ba**, *s.* [Maharrta (1) *Baba*, a proper name borne by many men; (2) *baba*, a term of endearment for a young child of the male sex. Akin to Eng. *baby*.]

Among Anglo-Indians: Used in the second of these senses.

**bāb'-ble**, \* **bāb'-le** (**le = el**), *v.i. & t.* [In Dut. *babbelen*; Ger. *babbeln*; Fr. *babblier*. Imitated from the sound.] [BABEL.]

**A. Intrans.**: To send forth vague unmeaning sounds in an unintermitted stream.

I. Of persons: Used—

1. Of the imperfect attempts at speech which characterise the period of infancy.
2. Of the talk of persons whose powers are falling through old age or serious sickness.

*Classia Myth.*: The Roman god of wine, generally identified, whether correctly or not, with the Greek Dionysos, the divine patron of wine, inspiration, and dramatic poetry. His worship, or at least the frenzied form of it, is said to have arisen in Thrace and reached Rome through the Greek colonies in Southern Italy. Like Dionysos, he was one of the *Dii Selecti*, or "Selected gods." He was fabled to be the son of Jupiter and Semele. He figures in perennial youth, with a crown of vine or ivy leaves around his temples, and holding in his hand a spear bound with ivy. Tigers, lions, or lynxes are yoked to his chariot, whilst he is accompanied by bacchantes, satyrs, and his foster-father and preceptor Silenus. He is said to have conquered India, and his worship (*BACCHANAL*) has more an Oriental than a European aspect. In the foregoing article the most common form of the myth is given; there are others so inconsistent with it, and with each other, that possibly, as Cicero, Diodorus, and others think, several personages have been confounded together under the name of Dionysos or Bacchus. **băd', bād'd'e, a. & s.** [Etymology doubtful. Prof. Zupitza with great probability sees in *bad-ite* the Mid. Eng. reproduction of O. Eng. *baedde* = a hermaphrodite; assuming a later adjectival use, and the loss of final *l*, as in *mycel, mucho*. (N.E.D.)]

**A. As adjective:** The opposite of good; a word of very general application, signifying whatever person or thing is so exceedingly inferior to the average of his or its class as to require a positive word to express the notable deficiency.

**I. Of persons:**

- 1. Morally depraved. "Thou may'st repent, And one bad act, with many deeds well done, May'st cover."—Milton.
- 2. Very inferior in intellectual characteristics, as in skill, knowledge, &c. "In every age there will be twenty bad writers to one good one; and every bad writer will think himself a good one."—Macaulay: *Hist. Eng.*, ch. xxiv.

- 2. Badness, wickedness; a wicked, vicious, or corrupt state.

"Thus will the latter, as the former, world Still tend from bad to worse."—Milton: *P. L.*, bk. xii.

Crabb thus distinguishes between *bad, wicked, and evil*. *Bad* respects moral and physical qualities in general; *wicked*, only moral qualities; *evil*, in its full extent, comprehends both *badness* and *wickedness*. Whatever offends the taste and sentiments of a rational being is *bad*—e.g., *bad food, bad air, bad books*. Whatever is *wicked* offends the moral principles of a rational agent: e.g., any violation of the law is *wicked*; an act of injustice or cruelty is *wicked*—it opposes the will of God and the feelings of humanity. *Evil* is either moral or natural, and applicable to every object contrary to good; but used only for what is in the highest degree *bad* or *wicked*. When used in relation to persons, *bad* is more general than *wicked*; a *bad* man is one who generally neglects his duty; a *wicked* man one chargeable with actual violations of the law, human or Divine—such an one has an *evil* mind. A *bad* character is the consequence of immoral conduct; but no man has the character of being *wicked* who has not been guilty of some known and flagrant vices: the inclinations of the best are *evil* at certain times. (Crabb: *Eng. Synon.*)

2. Place of residence, abode. (*Gl. Sibb.*) (Jamieson.)

**bădġe, \* băġġe, \* bāġe (Eng.), bād'-ġie, bāu'-ġie (Scotch), s.** [In the Anglo-Saxon

*bag* is = a crown, and *beah* = a bracelet, a neck-ring, a lace, garland, or crown; Dut. *bag* = a pendant, an ear-drop, a ring; Fr. *bague* = a ring; Lat. *bacca* = . . . the link of a chain. Skinner, Minshew, Mahr, &c., connect *badġe* with these words. Mahr admits the affinity of *badġe* to the A.S. *beag* and *beah*, and adds as cognate words, Fries. *beage* = bandage; Low Lat. *bauga, bauca, boga* = bracelet, and *bagia, bagea* = sign. Webster ventures on no hypothesis; Johnson believes it to be from Lat. *bajulo* = to carry a heavy burden; and Wedgwood, with some misgiving, makes it one of a group with *botch* and *patch*.] [BADGE, v.] (See example.)

**A. Ordinary Language:**

**I. Lit.:** A mark or cognizance worn on the dress to show the relation of the wearer to any person or thing. [B. Her.]

"The outward splendour of his office is the badge and token of that sacred character which he inwardly bears."—Atterbury.

2. A characteristic mark or token by which anything is known.

"To clear this spot by death, at least I give A badge of fame to slander's livery."—Rape of Lucrece, 1058, 4.

"Sweet mercy is nobility's true badge."—Shaksp.: *Titus Andron.*, I. 2.

**B. Her.:** A cognizance. [COGNIZANCE.] A mark of distinction somewhat similar to a crest, but not placed on a wreath, nor worn upon the helmet. Princes, noblemen, and other gentlemen of rank had formerly, and still retain, distinctive badges. Thus, the broom-plant (*Planta genista*) was the badge of the royal house of Plantagenet, a red rose that of the line of Lancaster, and a white one that of the line of York. The four kingdoms, or old

nationalities, the union of which constitutes the home portion of the British empire, and the nucleus of the rest, have each a distinct royal badge. These were formally settled by sign-manual in 1801, and are the following:—For England: A white rose within a red one, barbed, seeded, alipped, leaved proper, and ensigned with the imperial crown. For Scotland: A thistle, slipped and leaved proper, and ensigned with the imperial crown. For Ireland: A harp or, stringed argent, and a trefoil vert, both ensigned with the imperial crown. For Wales: Upon a mount vert, a dragon passant, with wings expanded and endorsed, gules. (Gloss. of Heraldry.) Formerly those who possessed badges had them embroidered on the sleeves of their servants and retainers [RETAINERS], and even yet the practice is not extinct.

BADGE OF ARTHUR, PRINCE OF WALES. (1500.)

The history of the changes which badges have undergone is interesting. In the time of Henry IV. the terms *livery* and *badge* seem to have been synonymous. [LIVERY.] A badge consisted of the master's device, crest, or arms on a separate piece of cloth, or sometimes on silver in the form of a shield, fastened to the left sleeve. In Queen Elizabeth's reign the nobility placed silver badges on their servants. The sleeve badge was left off in the reign of James I., but its remains are still preserved in the dresses of porters, firemen, and watermen, and possibly in the shoulder-knots of footmen. During the period when badges were worn the coat to which they were affixed was, as a rule, blue, and the blue coat and badge still may be seen on parish and hospital boys. (Douce: *Illustrations of Shakespeare*, 1839, pp. 205-7.)

**badġe, v. t.** [From the substantive.] To invest with, or designate by, a badge; to blotch, to daub.

"While his light heels their fearful flight can take, To get some badġeless hue upon his back."—*Sp. Ital.*: *Sat.*, iv. 5.

\* **băd'-ġēr, bād'-ġēard, \* bāġ'-ġard, a.** [Fr. *blaireau* = a badger; O. Fr. *bladier* = a corn dealer; Low Lat. *bladarius* = a little corn-dealer; *bladarius, bladerius* = a corn-dealer, a badger, from *bladum, bladium, blada* = corn, which the badger was evidently believed to carry away.]

**A. Of persons:** A person who bought corn or other provisions in one place and carried them to another, with the view of making profit on the transaction. [BADGERING.]

"Some exemption ought not to extend to badġers, or those who carry on a trade of buying of corn or grain, selling it again without manufacturing, or of other goods unmanufactured, to sell the same again."—Nicolson and Burn: *Hist. of Cumberland*, p. 812.

**B. Of animals** (believed to carry off corn in the same manner as the persons now described).

**I. Ordinary Language:**

1. A mammalian animal found in England as well as on the Continent. It stands intermediate between the weasela and the bears, and was called by Linnaeus *Ursus meles*, but is termed by modern naturalists *Meles vulgaris*. [MELES.] It is a nocturnal and hibernating animal, with powerful claws, which enable it

băil, bōy; pōit, jōwl; cat, çell, chorus, çhin, bench; go, çem; thin, çhis; sin, aç; expect. Çenophon, exist. -ÿng. -cian, -tian = çhan. -tion, -sion, -cioun = çhün; -çion, -çion = çhün. -tious, -sious = çhüs. -ble, -die, &c. = bël, dël.

to burrow in the ground. It feeds chiefly on roots. It can bite fiercely when brought to bay. It is of a light colour above, and dark beneath. It secretes an oily matter of a very offensive odour. Country people speak of a dog and a bug badger, but they are not distinct even as varieties.

2. The English designation of the genus *Meles*, which contains one or two other species.

II. Technically:

1. *Her.* The badger is often introduced in heraldic blazonry: it is sometimes called a "brock" (see example under B., I. 1), and sometimes a gray. (*Gloss. of Her.*)

2. *The Badger of Scripture*, Hebrew *חַחַשׁ* (*tachhash*), has not been identified with certainty. The Septuagint translators render the Heb. *tachhash*, not by a substantive, but by the adjective *κακίθινα* (*huakithina*) = hyacinthine, hyacinth-coloured; as, however, the word is at times used in the plural, it cannot be an adjective. It is probably an animal, but which is far from determined. Gesenius thinks it the seal or badger itself; the Talmud an animal like a weasel or marten; Col. Hamilton Smith a kind of antelope, such as the tachmote, tacasse, or pacasse of Eastern Africa. Other opinions make it a dolphin or a sea-cow, or a dugong, or a kind of hyena. Such diversities of opinion make darkness visible instead of removing it.

"And thou shalt make a covering for the tent of ram's skins dyed red, and a covering above of badgers skins."—*Exod. xxvi. 14.*

Cape-badger. [HYRAX.]

2. To struggle ineffectually against, as when a ship is said to baffle ineffectually with the winds.

¶ (a) Wedgwood believes that there are two distinct verbs spelled baffle, which have been confounded together. Under the one he would place the signification given above as No. 1, viz., to degrade, to insult. The second and third significations of the transitive verb, and that ranked under the intransitive one, he would relegate to his second verb, of which the primary form was intransitive, signifying to act in an ineffective manner, and transitively to cause one to act in such a way. This second verb he connects with the Swiss baffeln = to chatter, to talk idly. (Wedgwood: Dict. Eng. Etym., 2nd ed., p. 39.)

¶ (b) Crabb thus distinguishes between the verbs to baffle, to defeat, to disconcert, and to confound: "When applied to the derangement of the mind or rational faculties, baffle and defeat respect the powers of argument, disconcert and confound the thoughts and feelings. Baffle expresses less than defeat; disconcert less than confound. A person is baffled in argument who is for the time discomposed and silenced by the superior address of his opponent; he is defeated in argument if his opponent has altogether the advantage of him in strength of reasoning and justness of sentiment. A person is disconcerted who loses his presence of mind for a moment, or has his feelings any way discomposed; he is confounded when the powers of thought and consciousness become torpid or vanish." "When applied to the derangement of plane, baffle expresses less than defeat; defeat less than confound; and disconcert less than all. Obstinacy, perseverance, skill, or art baffles; force or violence defeats; awkward circumstances disconcert; the visitation of God confounds. When wicked men strive to obtain their ends, it is a happy thing when their adversaries have sufficient skill and address to baffle all their arts, and sufficient power to defeat all their projects; but sometimes when our best endeavours fail in our own behalf, the devices of men are confounded by the interposition of Heaven." (Crabb: Eng. Synon.)

practice being to arrest persons who now would only be summoned, an excuse was required for again letting those go against whom the charge was trivial. So, with all gravity, there were accepted as their securities John Doe and Richard Roe, two mythic personages whom no one had ever seen in the flesh, and who were known to be utterly unproductive if the friend for whose appearance they became responsible thought fit to decamp. If the charge was a more serious one, *Special Bail*, called also *Bail* above, was requisite; it was that of substantial men, and in this case no shadowy personages would do. The Act 2 Will. IV., c. 39, § 2, so altered the form of process that the necessity for Messrs. Doe and Roe's services was at an end; and the Common Procedure Act, 15 and 16 Vict., c. 76, passed in 1852, completed the change which the former Act had begun.

**baking-powder, s.** A powder used in baking as a substitute for yeast. It consists of tartaric acid, bicarbonate of soda, and rice or potato flour. These ingredients must be powdered and dried separately, and then thoroughly mixed together. The flour is added to keep the powder dry, and prevent it absorbing moisture from the atmosphere. As the combination of tartaric acid with bicarbonate of soda produces tartrate of soda, which is an aperient, it would be better if manufacturers of baking powders would substitute aequicarbonate of ammonia for the bicarbonate of soda. Baking powders are generally free from adulteration, although alum has sometimes been found, but in very minute quantity.

‡ In Egypt and other parts of the Turkish empire (not, as is sometimes said, in India), the traveller has scarcely set foot on shore before clamour for "baksheesh" on the most frivolous pretexts, or in simple beggary, without pretext at all, assail his ears from every quarter. "Baksheesh" is the first Arabic word with which he becomes acquainted, and he acquires it unwillingly. It will be for his interest, as soon as possible, in self-defence, to learn three words more—"lâ shy hâ," meaning, "there is none."

**A. Ordinary Language:**

**I. An instrument for weighing.**

1. *Lit.*: That which has two scales; viz., the instrument, described under B. 1. 3., for weighing bodies. It is called "a balance," "a pair of balances," or, more rarely, "balances."

"A just weight and balance are the Lord's; all the weights of the bag are his work."—*Prov. xvi. 11.*  
"... had a pair of balances in his hand."—*Rev. vi. 5.*  
"Just balances, just weights, a just ephah, and a just hin, shall ye have..."—*Lev. xix. 35.*

**2. Figuratively:**

(a) What may be called mental scales; those powers or faculties which enable one to estimate the relative weight, advantage, or importance of two things, neither of which can be cast into material scales.

"If a person suffer much from sea-sickness, let him weigh it heavily in the balance."—*Darwin: Voyage round the World*, ch. xxi.

(b) The emblem of justice, often figured as a bandaged person holding in equilibrio a pair of scales.

To *sway the balance*: To administer justice.

"Discernment, eloquence, and grace,  
Proclaim him born to sway  
The balance in the highest place,  
And bear the palm away."

*Couplet: Promotion of Thurston.*

**II. The state of being in equipoise.**

1. *Lit.*: The equipoise between an article and the weight in the opposite scale; or any similar equipoise without actual scales being used.

"And hung a bottle on each side,  
To make his balance true."

*Couplet: John Gilpin.*

"I found it very difficult to keep my balance."  
—*Darwin: Voyage round the World*, ch. xvii.

**2. Figuratively:**

(a) The act of mentally comparing two things which cannot be weighed in a material balance.

"Upon a fair balance of the advantages on either side, it will appear that the rules of the gospel are more powerful means of conviction than such message."—*Asterbury*.

(b) Mental or moral equipoise or equilibrium; good sense, steadiness, discretion.

"... the English workmen completely lose their balance."—*J. & Mill: Polit. Econ.*, vol. 1, bk. 1, ch. vii. (Note).

**III. That which is needful to be added to one side or other to constitute an equilibrium; or also the preponderance one way or other before such adjustment is made.**

1. *Lit.*: Used in connection with the weighing of articles or the making up of accounts. [B.]

2. *Fig.*: Used in the estimating of things immaterial which cannot be literally weighed or calculated.

"... the balance of hardship turns the other way."—*J. & Mill: Polit. Econ.*, vol. 1, bk. II, ch. II, § 2.

**B. Technically:**

**I. Mechanics, &c.:**

1. *Common balance*: An instrument for determining the relative weights or masses of bodies. It consists of a beam with its fulcrum in the middle, and its arms precisely equal. From the extremities of the arms are suspended two scales, the one to receive the object to be weighed, and the other the counterpoise. The fulcrum consists of a steel prism, called the *knife-edge*, which passes through the beam, and rests, with its sharp edge or axis of suspension, upon two supports of agate or polished steel. A needle or pointer is fixed to the beam, and oscillates with it in front of a graduated arc. It points to zero when the balance is at rest. When

the beam is horizontal, the centre of gravity of the instrument should be in the same vertical line with the edge of the fulcrum, but a little beneath the latter. A good balance possesses both sensibility and stability. A balance is said to be sensible which so easily revolves upon its fulcrum that, when in equipoise, the addition of the minutest particle of matter to one scale makes it sensibly move. It is stable when, owing to the low position of the centre of gravity, it does not long oscillate on being disturbed. This first type of balance may be modified in various ways.

(a) A *false balance* of this type is one in which the arms are unequal in length, the longer one being on the side of the scale into which the article to be weighed is to be put. As the balance is really a lever [Leven], it is evident that a smaller weight than that in the scale will put the beam into equilibrium. The fraud may at once be detected by putting the article to be weighed into the scale containing the weight, and *vice versa*.

(b) *Hydrostatic balance*: A balance designed for the weighing of bodies in water, with the view of ascertaining their specific gravity.

2. A "Roman" balance, the same as the steelyard. [STEELEYARD.] Of this type the Chinese, the Danish or Swedish, and the bent lever balances are modifications.

**II. Mechanics and Natural Philosophy:**

*Balance of Torsion*: An instrument invented by Coulomb for comparing the intensities of very small forces. It consists of a metallic wire suspended vertically from a fixed point, to the lower end of which a horizontal needle is attached with a small weight designed to keep the wire stretched. The magnitude of a small force acting on the end of the needle is measured by the amount of "torsion," or twisting of the wire—in other words, by the arc which the needle passes over measured from the point of repose.

**III. Mechanics and Horology:**

1. *Balance of a Watch*: The circular hoop or ring which takes the place of the bob of a pendulum in a clock. The action of the hair-spring causes it to vibrate.

"It is but supposing that all watches, whilst the balance beats, think; and it is sufficiently proved, that my watch thought all last night."—*Locke*.

2. *Compensating Balance of a Chronometer*: A balance or wheel furnished with a spiral spring, with metals of different expansibility so adjusted that, in alterations of temperature, they work against each other and render the movements of the chronometer uniform.

**IV. Astron.:** A constellation, one of the signs of the zodiac, generally designated by its Latin name, *Libra*. [LIBRA.]

**V. Book & Account Keeping:** The excess on the debtor or creditor side of an account, which requires to be met by an identical sum entered under some heading on the other side if an equilibrium is to be established between the two.

**VI. Comm. & Polit. Econ. Balance of Trade:** Properly an equilibrium between the value of the exports from and the imports into any country, but more commonly the amount required on one side or other to constitute such an equilibrium.

"Nothing, however, can be more absurd than this whole doctrine of the balance of trade. . . . When two places trade with one another, this doctrine supposes that if the balance be even, neither of them either loses or gains; but if it leans in any degree so one side, that one of them loses and the other gains, in proportion to its declension from the exact equilibrium."—*Adam Smith: Wealth of Nations*, bk. IV, ch. II, p. 4.

**VII. Politics. Balance of Power:** Such a condition of things that the power of any one state, however great, is balanced by that of the rest. To maintain such an equilibrium all the nations jealously watch each other, and if any powerful and ambitious one seek to aggrandize itself at the expense of a weaker neighbor, all the other states, parties to the system, hold themselves bound to resist its aggressions. The ancient Greek states thus combined first against Athenian and then against Spartan domination. Several of the modern European states did so yet more systematically, first against Spain, then against France, and more recently against Russia. Many of these wars have tended to the vindication of international law and the preservation and increase of human liberty; but others have been detrimental to humanity, and the "balance of power" does not now override every consideration to the extent

that it did formerly. Those who advocate it have no other ambition than to maintain the "status quo," however arbitrary or obsolete. They are logically bound to condemn the resurrection of Italy, the unification of Germany, the destruction of the Pope's temporal power, and the curtailment of Turkey—events which have reconstructed a great portion of Continental Europe on a basis more natural than that previously existing, and therefore more likely to maintain itself spontaneously, in place of requiring, at intervals, a great expenditure of blood and treasure to prevent it from being overturned.

**balance-beams, s. pl.** Beams constituting part of the machinery for lowering a drawbridge, and which, moving upwards, cause it to descend.

"Full harshly up its groove of stone,  
The balance-beams obeyed the blast,  
And down the trembling draw-bridge cast."  
*Scott: The Bride of Triermain*, l. 14.

**balance-electrometer, s.** An instrument invented by Cuthbertson for regulating the amount of the charge of electricity designed to be sent through any substance. Essentially, it consists of a beam with both its arms terminating in balls. One of these is in contact with a ball beneath it, supported by a bent metallic tube, proceeding from the same stand as that on which the beam rests. When electricity is sent through the instrument, the two balls repel each other, and the beam is knocked up. Its other extremity consequently descends, the ball there coming in contact with another one at the top of an insulated column, and a discharge will there take place. The weight, overcome by the repulsive force, will measure the intensity of the latter. It has been superseded by instruments on other principles.

**balance-fish, s.** A name sometimes given to a shark of the genus *Zygenia*.

**balance-knife, s.** A tshik-knife with a handle which balances the blade.

bál-án-ò-phòr-á'-gè-æ (Lindley), bál-án-ò-phòr'-ò-æ (Richard), s. pl. [BALANOPHORA.] Cynomoriaceae. An order of plants placed by Lindley under the class Rhizanthos or Rhizogones, but believed by Dr. Hooker to have an affinity to the Exogenous order Holorgeae, or Hippuridae. They are succulent, fungus-like, leafless plants, usually yellow or red, parasitical upon roots. The flowers are mostly unisexual; they are crowded together in heads or cones. The perianth in the males is generally three or six cleft; the ovary has one or two styles, but only one cell and one pendulous ovule. Lindley estimated the number known in 1846 at thirty. They occur in America; at the Cape of Good Hope and in other parts of Africa; also in Asia. One species occurs in Malta. In properties they seem to be styptic. *Cynomortum coccineum*, called by apothecaries *Fungus Meibensis*, is so, as are some species of *Hellecia*. Embryophytum is eaten in Peru as if it were a fungus. [BALANOPHORA, CYNOMORIUM.]

Though fixed when adult, it swims about when immature, and in that state somewhat resembles an entomostracan. [ACORN-SHELL.]

Ord. Lang. & Arch.: A gallery or projecting framework of wood, iron, or stone, in front of a house, generally on a level with the lower part of the windows in one or more floors. Balconies are supported on brackets, cantilevers, rails, consoles, or pillars, and are often surrounded by iron rails or by a balustrade of stone. They are very common outside the better houses in large towns. When they are sufficiently strong the inmates of the house can use them for standing or sitting in the open air; when more feebly supported, they may be employed as form-stands for plants in flower-pots.

"The streets, the balconies, and the very housetops were crowded with gazers."—Macaulay: *Hist. Eng.*, ch. xi.

(a) The form *balcone* occurs in Howell's Letters (dated 1650.) (Halliwell: *Contrib. to Lexic.*) It is found also in *Holiday's Juvenal* (1618). This is probably the earliest instance.

(b) In 1836, Smart noted that the change of accent from the second syllable of the word to the first had taken place within the previous twenty years.

Catholic Church, not so much to protect it as to impart to it additional grace and dignity.

It is generally of a square form, covered with silk or other rich cloth, fringed at the margin. The example from Nashe given below is in favour of this etymology. But Joseph Hunter, writing in Boucher, suggests that *balderdash* may be from Wel. *baldardâ, baldordâ* = to babble, to prate, to talk idly; *baldardidus* = prating, babbling, talking idly. With this view Wedgwood agrees, and adds Teutonic and other affinities. In Gael. *ballarataich, ballardaich* is = a loud noise, shouting; Sw. *buller* = noise, clamour, bustle; Dan. *bulder* = noise, rumbling noise, bustle, brawl; Dut. *buldering* = blustering. Before the revival of letters had directed attention to the great classic models of epic poetry, native ballads were highly appreciated, even by persons of rank and culture, and the bard was a welcome guest at their social entertainments. This state of things was in full force between the eleventh and thirteenth centuries, during which period the ballad, though still mainly occupied in celebrating heroic exploits, began to embrace a wider range of subjects. **Dramatic Art:** A dramatic representation, consisting of dancing and pantomime, regulated by the strains of music, and generally attended by the subordinate accessories of scenery and decoration. It was first introduced by the Greeks, was copied and developed by the Romans, and was revived in more modern times by the Italians, whose example diffused it over most civilised countries. Our own nation received it from the French. Till the decline of the Roman empire, the performers were men, then women were introduced, and have since been the chief actors in the ballet. The bad taste of the play-going public has always tended to drag down the ballet to the low level of a mere exhibition of gymnastic skill in dancing, whereas its original and specific aim was to act by gesture instead of words a drama illustrative of the life, manners, and costumes of foreign nations.

**A. Ordinary Language:**

**I. Originally:**

\* 1. A large as contradistinguished from a small ball; *baloon*, as mentioned in the etymology, being the augmentative of *ball*. *Spec.*, the large ball called by Minshew a "wind ball," used in the games defined under No. 2.

"Like balloons full of wind, the more they are pressed, the higher they rise."—*Heuyt: Sermons* (1858), p. 118.

† Todd thinks that the foregoing example suggests the existence of a machine for traversing the atmosphere as early as 1658. But may it not refer to a ball pressed against the ground, and again elastically springing up?

2. A kind of game somewhat resembling tennis, played in a field with a large ball of leather inflated with air, and driven to and fro with the arm.

"We had a match at baloon, too, with my Lord Whachum, for 4 crowns. Oh, sweet lady, 'tis a strong play with the arm."—*Old Play, IV. 158. (Boucher)*.

"Foot-ball, baloon, quintance, &c., which are the common recreations of the country folks."—*Burton: Anat. of Mel.*, p. 208.

**II. Subsequently:**

1. Gen.: Anything large and spherical, or nearly so, especially if at the same time it is hollow. [B.]

2. *Spec.*: The machine for aerial navigation described under B. 4.

**B. Technically:**

\* 1. *Old Chem.*: A large spherical receiver with a short neck, used in distillation.

2. *Arch.*: A ball or globe placed on the top of a pillar. (*Johnson*.)

3. *Pyrotech.*: A ball of pasteboard, stuffed with combustible matter, which, when fired, mounts to a considerable height in the air, and then bursts into bright sparks of fire resembling stars. (*Johnson*.)

4. *Aeronautics*: A machine designed for aerial navigation. The sight of soap-bubbles rising into the air, and of the flight of birds, must have made men in all ages give at least an occasional stray thought to the subject of aerial navigation; but the first deliberately considered scheme recorded seems to have been that of Francis Lana, a Jesuit, who, in 1670, proposed to raise a vessel into the atmosphere by means of four metallic globes, having a vacuum inside. This scheme, if tried, would have failed; the globes of metal, if intensely thin, would have been crushed in a moment by the surrounding air; whilst if made thick enough to resist the pressure, they would have been far too heavy to rise. The only type of balloon which as yet has succeeded was invented early in 1772, by the brothers Stephen and Joseph Montgolfier, paper-makers of Annonay, near Lyons, who publicly exhibited at Annonay the first balloon ascent ever witnessed, on June 5, 1783. Their balloon was filled with air rarefied by a fire lighted in the car. In December of the same year, M. Charles, Professor of Physics in Paris, substituted hydrogen gas for rarefied atmospheric air. On November 21, 1783, the Marquis d'Arlandes and M. Pilatre ascended 3,000 feet or more in a balloon, and, passing over Paris, descended again in safety. Since then many daring aeronautic feats have been successfully achieved, while some fatal accidents have occurred. M. Blanchard, ascending from Paris on March 2, 1784, was the first to carry up with him a parachute to aid him in his descent if a catastrophe occurred. On November 25, 1783, the first English balloon was sent up from London, with no person in the car; on September 15, 1784, Vincentio Lunardi ascended from London; on January 7, 1785, M. Blanchard and Dr. Jeffries crossed the English Channel from Dover to the forest of Guinnes; on September 21, 1802, M. Garnerin safely descended in London from a parachute. Twice in 1804 M. Gay-Lussac ascended from Paris for meteorological and other scientific research, the first time, accompanied by M. Biot, 13,000 feet; the second time, alone, 23,000 feet. It will be observed that in the early history of balloons France takes undisputed precedence of England. At a later period, however, England gained a triumph not yet paralleled on the Continent or elsewhere, Mr. Glaisher, a celebrated aeronaut, having ascended from Wolverhampton, on September 5, 1862, to the amazing altitude of 37,000 feet. This was one of twenty-eight ascents he made for scientific purposes, under the auspices of the British Association, between July 17th, 1862, and May 26th, 1866. America has had a number of daring aeronauts, some of whom have made hundreds of ascents.

A great drawback on the utility and safety of aerial travelling is the inability, in the present state of science, effectively to guide the machine in the air. A balloon of modern type is made of long bands of silk sewed together, and rendered air-tight by being covered with caoutchouc varnish. It is filled with hydrogen or coal gas. At the top there is a safety-valve, under the aeronaut's control. He sits in a light wicker-work boat or car, suspended by means of cords from a network covering the balloon. A balloon about forty-eight feet long by thirty-six feet broad and thick will carry three persons; with its car and other accessories it weighs about 300 pounds. *Capitèe Balloon*: A balloon fixed by a rope or chain to the ground so that it is not free to ascend beyond a certain height. *Fire Balloon*: A balloon constructed of paper or some light material, which, at pyrotechnic displays, is sent up into the air, carrying a fire or light instead of an aeronaut.

**bál-ló'on-ýng**, *s.* [Eng. *balloon*; -ing.] The art of constructing balloons, or of using them for the purpose of aerial navigation.

"Since then the art of ballooning has been greatly extended, and many ascents have been made."—*Atkinson: Gasol's Physics*, 2nd ed. (1868), p. 134.

**Military Ballooning**: The art of using balloons for military purposes. Sometimes captive balloons have been employed to reconnoitre the enemy in war; and on Friday, October 7, 1870, during the investment of Paris by the Germans, the celebrated French deputy, Gambetta, escaped from the beleaguered capital in a balloon. The first use of balloons in the British Army was at Suakim in 1855.

**bál-ló'on-ry**, *s.* [Eng. *balloon*; -ry.] The art or practice of ascending in a balloon; aeronautics. (*Quarterly Review*.)

**bál-lót**, *s.* [Fr. *ballot* = a ballot, a voting-ball, a panner, a basket; Sp. *balota*; Port. *balote*; Ital. *ballotta* = a little ball, dimin. of *balla* = a ball.]

1. A ball used for the purpose of voting. In casting a ball for or against an individual, the arrangement sometimes is that if the vote be designed in his favour, then a white ball is used; but if it be intended to be against him, then one of a black colour is employed—whence the phrase "to blackball one." Other methods, however, may be adopted: thus, a ball of any colour put through a hole into one drawer may indicate a favourable vote, and into another an unfavourable one. Used in this sense, *lit.*, for such a ball as that described, or *fig.*, for anything, even though not a ball, employed in secret voting.

2. The method of voting in a secret manner, by means of balls of different colours, or put into different compartments, or in any other way; secret as opposed to open voting. Admission into scientific societies, clubs, the direction of banks and other large commercial establishments, has long been conducted by ballot. In ancient Athens and the other Greek states it was in use when votes had to be taken on political questions. It has long been established in America, and for a shorter period in France. In Great Britain it constituted one of the five points in the Chartist programme, both of the great political parties in the state being at first opposed to it, as degrading it a revolutionary project. Gradually, however, the mass of the Liberal party ceased to fear the ballot, and opposition to it on the part of the Conservatives became less pronounced, till at last, while Mr. Gladstone was in the plenitude of his power, a bill, legalising it as an experiment for eight years, was passed during the session of 1872. Its merits are that it constitutes a considerable barrier in the way both of intimidation and bribery, and thus encourages the voter to express his real sentiments, besides making elections much less likely to result in riot than when the old system prevailed. Within recent years a specially secret system of voting has been devised in Australia, and adopted in several other countries, notably in many of the states of the American Union. The purpose of this is to prevent intimidation of the voter, by enabling him to keep the character of his vote strictly secret, a result which was not achieved under the old system of the so-called secret ballot.

"A motion was made that the committee should be instructed to add a clause enacting that all elections should be by ballot."—*Macaulay's Hist. Eng.*, ch. xxi.

**ballot-box**, *s.* A box for the reception of ballot-balls or papers when a secret vote is being taken.

"A weapon that comes down as still  
As snow-flakes fall upon the sod,  
But executes a freeman's will  
As lightning does the will of God."

And from its force nor doors nor locks  
Can shield you—'tis the ballot-box."

*J. Pierpont: A Word from a Peititioner.*

2. *Balm of Acouchi*: The gum of the *Iceia acouchini*, a plant of the order Bursersceae. [ICICA.]

3. *Balm of Gilead*:

(1) *Scripture*: The gum of a tree and the tree itself, the latter growing, as its name suggests, in Gilead, a region east of Jordan, belonging chiefly to the tribe of Gad. It is called בָּשֵׂם (bāsem) in Heb., and ῥητίνη (rētīnē) in Septuagint Greek. It was used for healing wounds. (For reference to it see Gen. xxxvii. 25; xliii. 11; Jer. viii. 22; xlv. 11; Ezek. xxvii. 17.) It has not been satisfactorily identified by modern botanists. Kroyla thinks it may possibly have been the *Eleagnus angustifolius* of Linnæus. [See (2) a.]

(2) *Botany*:

(a) A tree, *Balsamodendron Gileadense*, the specific name being given because it was once supposed to be the *Scripture* "Balm of Gilead"—an opinion probably erroneous, for it does not at present grow in Gilead, either wild or in gardens, nor has it been satisfactorily proved that it ever did. (1) *Scripture*.] It is called also *B. opobalsamum*. It is a shrub or small-spreading apineous tree, ten or twelve feet high, with trifoliolate leaves in fascicles of 2-6, and reddish flowers having four petals. It is found south of 22° N. lat. on both sides of the Red Sea, in Arabia, Abyssinia, and Nubia. It does not occur in Palestine. (*Dr. Trimen, &c.*)

(b) *Its gum*: This is obtained from the trees by incision. It is called also *Balm of Mecca* and *Opobalsamum*. Two other kinds of gum are obtained from the same tree: the first (*Xylobalsamum*) by boiling the branches and skimming off the resin, which rises to the surface of the water; and the second (*Carpobalsamum*) by pressure upon the fruit.

*Balm of Gilead Fir*: A tree (*Abies balsamea*), which furnishes a turpentine-like gum. It is a North American fir, having no geographical connection with Gilead.

4. *Balm of Mecca*: The same as *Balm of Gilead* (2), b (q.v.).

occurs at the place so called, but according to Catesby because its colours, which are black and orange, were the same as those on the coat of arms or livery of the Lord Baltimore who was formerly proprietor of Maryland. (See etym.) The appellation "Hang Nest," or sometimes "Hanging Bird," is given because it builds a pendulous nest—that is, like a cylindrical pouch, sometimes sewed with horse hair; the curious structure being suspended from the end of a branch or a twig. Another name given to the Baltimore is "Fire Bird," because when its bright hue is seen through the green leaves the appearance somewhat resembles a flame of fire. Yet another name is "Golden Robin." It extends from Canada to Mexico, or even to Brazil, migrating to the northern part of this area about May, and to the southern one about the end of August or in September. (Wilson and Bonaparte, &c.)

Rows of such balusters are often placed in the front of galleries in churches, on the outside of terraces and bridges, or to support rails on stairs. **A. As substantive:** Any species of the botanical genus *Bambusa*, and specially the best-known one, *Bambusa arundinacea*. [BAMUSA.] It is a giant-grass, sometimes reaching the height of forty or more feet, which is found everywhere in the Tropics of the Eastern Hemisphere, and has been introduced into the West Indies, the Southern States of America, and various other regions in the Western world. It has the usual characteristics of a grass—the cylindrical stem, of flinty hardness externally, while soft or even hollow within; and the separation of the stem into nodes and internodes; and the inflorescence of a type found in many genera of the order, namely, in great panicles made up of a series of spikes of flowers. In some cases a substance called *talbasheer* [TABASHEER], consisting of pure silica, is found secreted in the nodes.

The uses to which the several species of bamboos are put in the regions where they grow are almost innumerable. In house-building they furnish the framework of the sides and roof, with the joists and other parts of the flooring. Villages of such materials are in many cases rendered very difficult of attack by being surrounded by a thick fence of aspliy species. Bows, arrows, quivers, the shafts of lances, and other warlike weapons can be made from the stems of bamboo, as can ladders, rustic bridges, the mats of vessels, walking-sticks, water-pipes, flutes, and many other objects. The leaves are everywhere used for weaving and for packing purposes. Finally, the seeds are eaten by the poorer classes in parts of India; and in the West India the tops of the tender shoots are pickled and made to supply the place of asparagus.

The word appears in the early part of the eighteenth century, and is mentioned in the *Teller* (No. 230) among "certain words invented by some pretty fellows." *Bam* may be either the source, or an abbreviation, of the longer word.]

†**A. Intrans.**: Intentionally to involve a subject in mystery or perplexity. To do so especially in money matters for purposes of fraud.

Tearing in long stripes, like those of endogenous in general, they differ from the normal type in doing so transversely on either side from the midrib, instead of longitudinally. The flowers also are different, and the nearest affinity of the order Musaceae, of which it or its congener, the plantain, is the type, is with the ginger and arrowroots, and not with the palms. The banana is about twenty feet high. It re-

sembles the plantain so closely that some think it a mere variety of that species; but it differs in having the stalk marked with dark-purple stripes and spots, and possessing a shorter, more rounded, and more luscious fruit. ¶ Crabb thus distinguishes between the verbs to banish, to exile, and to expel, and between the corresponding nouns banishment, exile, and expulsion. The idea of exclusion, or coercive removal from a place, is common to these terms.

(a) To banish and to exile are thus discriminated:—*Banishment* includes the removal from

bōil, bōy; pōut, jōwī; cat, çell, chorus, çhín, bench; go, çem; thín, thís; sín, aç; expect, Xenophon, exist. -íng, -clan, -tlan = shān. -çion, -tion, -sion = shūn; -tçion, -çion = zhūn. -tions, -sious = shūs. -ble, -dle, &c. = bēl, dēl.

or the prohibition of access to some place; *exile* signifies the removal from one's home; to *exile*, therefore, is to *banish*, but to *banish* is not always to *exile*. *Banishment* follows from a decree of justice; *exile* either by the necessity of circumstances or an order of authority. *Banishment* is a disgraceful punishment inflicted by tribunals upon delinquents; *exile* is a disgrace incurred without dishonour; *exile* removes us from our country; *banishment* drives us from it ignominiously. *Banishment* is a compulsory exercise of power which must be submitted to; *exile* is a state into which we may go voluntarily.

(b) The following is the distinction between to *banish* and to *expel*:—*Banishment* and *expulsion* both mark a disgraceful and coercive exclusion, but *banishment* is authoritative; it is a public act of government; *expulsion* is simply coercive; it is the act of a private individual, or a small community. *Banishment* always supposes a removal to a distant spot, to another land; *expulsion* never reaches beyond a particular house or society—e.g., a university or public school, &c. *Banishment* and *expulsion* are likewise used in a figurative sense, although *exile* is not: in this sense, *banishment* marks a distant and entire removal; *expulsion* a violent removal: we *banish* that which it is not prudent to retain—e.g., groundless hopes, fears, &c.; we *expel* that which is noxious—e.g., envy, hatred, and every evil passion should be *expelled* from the mind as disturbers of its peace.

C. As substantive:

1. Engineering: The act or operation of raising a bank against river-floods, the encroachments of the sea, or for other purposes.

2. Comm. & Polit. Econ.: The act or operation of dealing in money; the occupation or business of a banker; the methods he adopts in carrying on this occupation; and the general principles on which these methods are founded.

Though banking cannot have been much required, and in all likelihood did not arise till society had made considerable advances, yet its origin goes back to a remote period of antiquity. The practice of taking interest for money, which presupposes operations which, by whatever name called, are really banking, is alluded to in the Mosaic law (Exod. xxii. 25; Lev. xxv. 35-37; Deut. xxiii. 19, 20), as it was in the New Testament by the Divine Teacher in one of his parables (Matt. xxv. 27). The highly interesting discovery has recently

been made that there was a banking establishment in ancient Babylon, founded by a man called Egibi, which lasted at least from the first year of Nebuchadnezzar II. (B.C. 604) to the end of the reign of Darius Hystaspis (B.C. 485), and conducted financial operations of a magnitude which would have done no discredit to the Bank of England. (*Trans. Bib. Archaeol. Soc., vol. vi., 1879, p. 582.*)

Banking was well understood at Athens; it was established also in the capital and the provincial parts of the Roman empire, though not just on the scale of magnitude which might have been expected.

It languished through the Middle Ages, but revived with commerce in general about the middle of the twelfth century, Italy in this as in many other respects leading the way. Hence, as shown in the etymology, the English word bank comes from the Italian banco, which primarily means a bench, and points to the fact that the first bankers, while conducting their business, sat upon a bench, as the Hindoo money-changers do to this day. [MONEY-CHANGER.] From Italy the revival of banking spread to other civilised countries. Omitting banks of lesser note, that of Venice—the first public bank established in mediæval times—arose in 1157, that of Genoa in 1345, that of Barcelona about 1400, that of Amsterdam in 1609, and that of Hamburg in 1619. In 1694 the celebrated William Patterson founded the world-renowned Bank of England, its charter being dated July 27th of that year. The Bank of Scotland followed in 1695. In 1703 arose the Bank of Vienna, in 1765 that of Berlin, and in 1783 that of Ireland. The United States Bank commenced in 1790, though it was not incorporated till 1816; that of France was instituted in 1803, and that of Bengal in 1809.

Banking in the British Isles. The first notable traders in money in England were the Jews; then followed, from about the middle of the thirteenth century, Italians from Lombardy and other parts of Italy, whence the name Lombard Street for a well-known thoroughfare in London still swarming with bankers. The goldsmiths combined with their more specific avocation, first the exchange of coins, next the borrowing and lending of money, and finally banking of the more modern type came gradually into existence about the middle of the seventeenth century.

The object of all bankers is to trade in money. This may be done with capital which, in the strictest sense, is their own; or it may be so that, while employing this, they may invite deposits and current accounts from the public, thus keeping money in safe custody, of which the owner might be robbed if he retained it in his own possession, and making payments for him more safely and conveniently than he could do himself. [See DEPOSIT, CURRENT ACCOUNT.] The last-mentioned operation is generally carried out by means of bills or cheques. [BILL, CHEQUE, CLEARING-HOUSE.] The establishments now described are banks of deposit and of discount. To these functions some add that of being banks of issue, i.e., a bank which issues notes. [BANK-NOTE, ISSUE.]

The banks of the British Isles may be otherwise classified:—

(a) The Bank of England stands in a category by itself. It is ruled by a Governor, Deputy-Governor, and twenty-four directors. Its original capital of £1,200,000 was increased by successive subscriptions till in 1816 it reached £14,553,000. Its charter has frequently been renewed. It is, of course, a bank of issue. The £5 notes, by which it is best known to the general public, were first sent forth in 1793. It has been helped by the Government, and has helped the Government in return. Though generally prosperous, it has had its vicissitudes, having had to suspend payment of its notes in 1696, and between 1797 and 1820 was restricted from making payments in gold, though a first step towards the gradual resumption of the normal system had been made in 1817. The Act by which banking is now regulated is Sir R. Peel's celebrated Bank Act of 1844, one provision of which was that the issues of the Bank of England on securities should be limited to £14,000,000. The periodical settlement of dividends and annuities, contracted for at the National Debt Office in Old Jewry, is made at the Bank of England. The directors of the Bank meet every Thursday, to consider and fix the rate of discount, and for other business. Till lately

other banks and discount houses were wont to modify their own rate of interest by these periodical announcements, but of late some of them have acted more independently.

(b) The Joint-stock Banks of London and the provincial parts of England. The capital of a joint-stock bank is made up of the money subscribed by its shareholders. Most of these establishments are constituted on the principle of unlimited liability, by which is meant that if the bank become insolvent, the shareholders are responsible to the last farthing they have in the world for the debts of the bank; sharing its profits in time of prosperity, they must participate in its losses in days of adversity. Nay more, a trustee who holds bank shares is responsible personally to the extent of his private property, though he could not without fraud have appropriated any profits arising from the shares placed in his name. By an Act of Parliament passed in 1879, these will be permitted on certain conditions to diminish the excessive liability of their shareholders. Most of the joint-stock banks grant interest on the deposits. None within sixty-five miles of London are allowed to be banks of issue.

(c) Private Banks: Associations of private persons for banking purposes, not incorporated under Act of Parliament. These, as a rule, give no interest on deposits.

(d) United States: Banking has passed through a series of conditions. Before the Civil War, each state had its own banking system, the banks being banks of issue, and their notes often very poorly secured, with the result of great loss and distress in every period of financial depression. During the war the present National Banking System was inaugurated, in which the circulation is founded on the security of Government bonds, purchased by the banks, and deposited in the United States Treasury. This system makes note holders perfectly secure against loss by failure of banks, and reduces the risks of counterfeiting by assuring uniformity in notes. There are, under more recent laws, some state banks in existence, but these are not banks of issue.

(e) Savings Banks: Banks established for the reception of small deposits from the humbler classes of the community. In the savings banks of ordinary type a larger sum than the money is worth is paid for interest, the considerable deficit being made good from the consolidated fund.

¶ Post Office Savings Banks are established at all the Money Order Offices of the British Kingdom. Deposits are received from one shilling up to a certain limit. Interest is paid at the rate of 2½ per cent. per annum.

No further legal demands can be made against him, though, if strictly honourable, he of course feels that, morally viewed, his debts are still owing, and if at any future time he obtain the requisite resources, he is in conscience bound to liquidate them with interest from the time when his failure took place. [BANKRUPT LAWS.]

Strictly speaking, only a merchant or other commercial man can become a bankrupt; any one else failing to pay his just debts is said to be insolvent.

bankrupt laws, bankruptcy laws.

Laws which have been formed with the view of protecting a merchant who cannot pay his debts from unduly harsh conduct on the part of his creditors, and those creditors from any fraudulent conduct on the part of their debtor. [DEBT.] Experience has shown the first object to be easy of attainment, the second one difficult. The first English bankruptcy law was that of the 34 & 35 Hen. VIII., c. 4, which was rendered necessary to protect creditors from the shameless frauds to which they were too frequently subjected. Other statutes followed, which established the present Bankruptcy Court. In the United States national bankruptcy laws were passed in 1800 and 1840, but these were not long in operation. Another law was passed in 1867, which continued operative until 1878, when it was repealed.

Bankruptcy laws were passed in England in 1543 and 1571. These were consolidated and amended in 1861, 1863, and 1869.

No one under the rank of a knight banneret is entitled to a banner. [BANNERET.] [For the different kinds of banners, see COLOURS, FLAG, GONFANNON, GUIDON, ORIFLAMME, PENDANT, PENNON, and STREAMER.]

The order is now extinct, the last banneret created having been at the battle of Edgehill, in 1642, for his gallantry in rescuing the standard of Charles I.

A. As substantive: A tree, the Ficus Indica, or Indian fig-tree, celebrated for sending down

BANYAN-TREE.

new stems from its spreading branches, which, supporting those branches themselves, make a living colonnade of great extent. Colonel Sykes mentions a banyan-tree which he saw at the village of Mhow, in the Poona Collectorate, which had sixty-eight of the descending stems just mentioned, and constituted a grove capable, when the sun was

vertical, of affording shade to 20,000 men. The tree is well described by both Milton and Southey, except that Milton, misled by Pliny, makes the leaves larger than they are in nature, and describes loopholes cut in the banyan grove, which are wholly mythic—

“ . . . there soon they chose  
The fig-tree, not that kind for fruit renowned,  
But such as at that day, to Indians known,  
In Malabar or Decan spreads her arms,  
Branching so broad and long, that in the ground  
The bended twigs take root, and daughters grow  
About the mother tree, a pillared shade:  
High over-arched, and echoing walks between;  
There oft the Indian herdsmen, shunning heat,  
Shelters in cool, and tends his pasturing herds  
At loopholes cut thro’ thickest shade: those leaves  
They gathered, broad as Amazonian targe.”

Milton: P. L. bk. ix.

“It was a goodly sight to see  
That venerable tree,  
For o’er the lawn, irregularly spread,  
Fifty straight columns prop it lofty head;  
And many a long depending shoot,  
Seeking to strike its root,  
Straight like a plumes, grew towards the ground.  
Some on the lower boughs which crest their way,  
Fixing their bearded fibres round and round,  
With many a ring and wild contortion wound;  
Some to the passing wind at times, with sway  
Of gentle motion swung;  
Others of younger growth, unmoved, were hung  
Like stone-drops from the eavens’ fretted height.  
Beneath was smooth and fair to sight,  
Nor weeds nor briars deformed the natural floor,  
And through the leafy cope which bowed it o’er  
Came gleams of chequer’d light.  
So like a temple did it seem, that there  
A pious heart’s first impulse would be prayer.”

Southey: Curse of Kehama, bk. xiii.

**A. Literally:**

**I.** The act of baptizing any person or thing in or with water.

**1.** The act of immersing any one in water, or pouring or sprinkling it upon him or her as a religious and symbolical rite.

“*Baptism*: *Baptismus, baptisma.*”—*Præp. Parv.*

Two kinds of baptism by means of water are mentioned in the New Testament:—

(a) “The baptism of repentance for the remission of sins,” administered by John the Baptist in Jordan to those who, under the influence of his preaching, made confession of those sins.

“John did baptize in the wilderness, and preach the baptism of repentance for the remission of sins.”—*Mark* i. 4. (See also *Matt.* iii. 4.)

(b) The initiatory rite of the Christian Church, administered first by the apostles (*John* iv. 2) whilst their Divine Master was on earth, and which has continued to be dispensed to the present time.

**2.** The act of “baptizing” a thing instead of a person with water.

“The washing of a ship with salt water on passing the equinoctial line was formerly called in cant and somewhat profane language ‘her baptism.’”

**3.** A term employed by Protestant, not by Roman Catholic, writers for the blessing of bells designed for worship in the Church of Rome. [BAPTIZE, A., 1. 2.]

**II.** The state of being baptized.

**B.** Figuratively:

**I. Scripture:**

**1.** The doctrine, allegiance, or life into which the initiatory rite introduces one.

“And he said unto them, Unto what then were ye baptized? And they said, Unto John’s baptism.”—*Acts* xii. 3.

**2.** Death to sin and resurrection to newness of life.

“Therefore were ye buried with him by baptism into death: that like as Christ was raised up for the glory of the Father, even so we also should walk in newness of life.”—*Rom.* vi. 4.

**3.** Such a moral and spiritual state as warrants the answer of a good conscience towards God.

“The like figure whereunto even baptism doth also now save us (not the putting away of the filth of the flesh, but the answer of a good conscience toward God), . . .”—*1 Pet.* iii. 21.

**4.** Suffering, especially that of Christ.

“But I have a baptism to be baptized with; and how am I straitened till it be accomplished!”—*Luke* xii. 50.

**II. General Literature:**

**1.** The act or process of refreshing the heart by “sprinkling” it with something fitted to effect that end.

“If on the heart the freshness of the scene  
Sprinkle life coolness, and from the dry dust  
Of weary life a moment lave it clean  
With Nature’s baptism, . . .”

*Byron: Child Harold, l. 68.*

**2.** Initiation into any work or occupation fitted to make a change upon the character, and prevent the possibility of one’s ever being again what he was before. Thus, when during the Franco-German war of 1870, Prince Louis Napoleon, the same who perished so tragically in Zululand, was first exposed, by direction of his father, Napoleon III., and with his own consent, to the fire of the enemy at Saarbrück, the event was called a “baptism of fire.” So also during the Indian mutinies of 1857, the revolted sepoys, who had by murdering Europeans committed themselves to a course of action from which there was no return, were said to have undergone a “baptism of blood.” Formerly, the term baptism was also sometimes profanely applied in cant language to the outrageous practical jokes to which seamen or passengers in a vessel, who for the first time crossed the equinoctial line, were too frequently subjected, such procedure being deemed legitimate in that zero of latitude.

“**(1)** *Baptism of blood:*

*Theol.*: Martyrdom for the Christian faith, said to compensate for the want of the Sacrament. The same virtue is attributed to *baptism of desire* and *baptism of fire*.

(2) *Baptism of desire:*

*Theol.*: An ardent desire to receive the Sacrament, with perfect contrition for one’s sins. [“(1).]”

(3) *Baptism of fire:*

*Theol.*: The same as *baptism of blood* (q.v.). Used also of the gifts of the Holy Ghost.

(4) *Clinical baptism:*

*Theol.*: Baptism administered to a person on a sick-bed.

(5) *Conditional baptism:*

*Theol.*: Baptism administered conditionally to a person whose condition is unknown or about the validity of whose baptism doubts are entertained. The form is: “If thou art not baptized, I baptize thee,” &c.

**bāp-tis-mal, a.** [Eng. *baptism*; -al.] Pertaining to baptism.

“The baptismal service was repeatedly discussed.”—*Macaulay: Hist. Eng.*, ch. xiv.

**baptismal-character, s.**

*Theol.*: A term applied in the Roman and

Anglican churches to a certain spiritual mark which differentiates the souls of baptized Christians from those who have not received the sacrament of baptism. This necessarily carries with it the belief that the acts—whether good or evil—of an unbaptized person can never be the same as those of one who has been baptized, and that the sacrament of baptism cannot be repeated without sacrilege. Also called *baptismal mark* or *baptismal seal*.

**baptismal-name, s.** A name given in baptism; a Christian name.

**baptismal regeneration.** [REGENERATION.]

**baptismal-shell, s.**

*Eccles.*: A small shell-shaped metal vessel with which water was taken from the font and poured on the head of the candidate in baptism. A small shell, polished and mounted in precious metal, was sometimes employed.

**baptismal-vows, s. pl.**

*Eccles.*: The promises made by the sponsors for a child, or by an adult for himself, in the sacrament of baptism.

**bāp-tis-mal-ŷ, adv.** [Eng. *baptismal*; -ly.] After the manner of baptism; through means of baptism. (*Quin.*)

**Bāp-tist, bāp-tist, s. & a.** [In Ger. *Baptist*; Sp. *baptista*; Lat. *Baptista*; Gr. *βαπτιστής* (*Baptistēs*) (*Matt.* iii. 1) = the Baptist.] [BAPTIZE, BAPTISM.]

**A.** As substantive:

**1. Scripture:** One who extensively administers the rite of baptism. The term was and is especially applied to John, the forerunner of Jesus.

“In those days came John the Baptist, preaching in the wilderness of Judæa. . . . Then went out to him Jerusalem, and all Judæa, and all the region round about Jordan, and were baptized of him in Jordan, confessing their sins.”—*Matt.* iii. 1-6.

**2. Theol., Church Hist., & Ord. Lang.:** A Christian who holds that it is not according to Scripture to baptize infants, but that the ordinance of baptism should be administered only to believers in Christ, and in their case not by sprinkling, or affusion, but by immersion.

Whether the early Church did or did not baptize infants has been, and still is, a matter of dispute. It is universally admitted that some of the so-called heretical sects of the Middle Ages were opposed to infant baptism. At the time of the Reformation the question to whom baptism should be administered came very prominently before the Church and the world, owing to the fact that a considerable number of those who, under the leadership of Luther, Melancthon, and other religious chiefs, cast off their allegiance to Rome, ultimately abandoned all belief in infant baptism. Their opponents called them Anabaptists, implying that they administered a second baptism, the first one, that dispensed in infancy, still remaining in force; whilst they, of course, repudiated this name, alleging that the first baptism given in infancy being invalid, that which they dispensed in adult life was the first, and not the second.

Baptist views first attracted attention in England in 1536, and the earliest congregation was formed there in 1611. The first Baptist in the United States was Roger Williams, who seceded from the Puritan communities of New England, was baptized by immersion in Providence in 1639, and united with others to found there the first Baptist Church in America. He was one of the earliest of men to announce the principle of religious liberty, and to give utterance to the Baptist doctrine that no one should be bound to assist in maintaining worship against his own consent. Two years afterwards another eminent Baptist, John Clark, founded the colony of Rhode Island upon the island of that name. A Baptist church was founded in Dover, New Hampshire, about the same time, while the first in Massachusetts was founded at Swansea, in 1663. The growth of the act in this country was very moderate during the colonial period, not more than 77 Baptist churches being known to exist in America in 1770. After the Revolution it grew with considerable rapidity, the civil disabilities under which its members had labored being now removed. In 1784 there were 471 churches and 35,101 members. By 1812 these had increased to 2164 churches and

172,972 members. It was not until 1802 that the Massachusetts Missionary Society, the first Baptist missionary society in this country so far as is known, was formed, though missionary efforts had been previously made. Elder John Leland, born in Massachusetts in 1754, travelled during his missionary tours 75,000 miles and baptized more than 1500 converts. Since the dates given the Baptist Church has had a very active growth in this country, the number of its members now exceeding those of any other religious denomination. In 1893 it possessed in the United States 36,793 churches and 3,383,160 members, its church and college property being valued at more than \$100,000,000. There are less than 500,000 Baptists in the remainder of the world.

The American Baptists are in favor of a complete separation of Church and State, and have always protested against state support of religion and the infliction of pains and penalties on religious grounds. They were for a long time almost alone in these views, but are now joined in them by all American Protestants. They hold that baptism, according to the Scripture teachings, means immersion, and hold that none but those who have been thus baptized are qualified to partake of the Lord's Supper. The American Baptist Missionary Union grew out of a preliminary organization founded in 1814. During the eighty years of its existence it has sent out more than 500 missionaries, who have baptized nearly 200,000 converts. The American Baptist Home Mission Society was founded in 1832, has sent out about 1000 missionaries and teachers, and has done excellent work among the Southern freedmen.

**I. Historically:**

1. *Among the Greeks:* A foreigner; one who could not speak Greek. At first the Romans were included by the Greeks under the term *barbarian*; but as the inhabitants of the great Italian city gradually gained imperial power, and moreover began to consider the Greek language as a desirable if not even an indispensable part of a liberal education, they were no longer placed in the category of "barbarians," nor was their speech deemed "barbarous." When the Greeks became the most civilised people in the world the term *barbarian* came to be used with some reproach, but less so than among ourselves now.

"Proud Greece all nations else *barbarians* held, Boasting her learning all the world excell'd."

Denham.

"There were not different gods among the Oreeks and *barbarians*."—Stillington.

2. *Among the Romans:*

(1) *Before the fall of the Empire:* A term applied to a foreigner who could speak neither Latin nor Greek.

"I would they were *barbarians*, as they are, Though in Rome litter'd."

Shakspeare: Coriolanus, III. 1.

(2) *After the fall of the Empire:*

(a) *First:* A person belonging to any of the uncivilised Germanic tribes who long threatened, and at last overthrew, the Roman Empire.

(b) *Subsequently:* A Berber from Northern Africa.

**II. At the present time:**

1. A savage; a person belonging to some uncivilised race. In general, but not always, it implies some cruelty or ferocity; a ruffian, a cruel monster. (Sherborne.)

2. A person of whatever race, civilised or uncivilised, who is savage in manners or conduct.

"Europe has been threatened with subjugation by *barbarians*, compared with whom the *barbarians* who marched under Attila and Alboin were civilised and humane."—Macaulay: Hist. Eng., ch. 2.

**B. As adjective:**

1. Pertaining to a barbarian in the Greek, the Roman, or the English sense. [See the substantive.] Specially in the last of these three, i.e., pertaining to a person belonging to one of the uncivilised races of mankind.

"Some felt the silent stroke of mould'ring age, Barbarian bloodless." Pope.

2. Barbarous, cruel.

"Divers great monarchies have risen from *barbarism* to civility, and fallen again to ruin."—Sir J. Davies: Ireland.

2. *Of individuals:* Absence of culture, great ignorance, want of manners, incivility.

"Moderation ought to be had in tempering and measing the Irish, to bring them from their delight of licentious *barbarism* unto the love of goodness and civility."—Spenser: State of Ireland.

**II. Of deficiency in humanity:** Cruelty, relentless hardness of heart, whatever be the amount of external polish or intellectual culture. In this sense, BARBARITY (q.v.) is the more common term.

"They must perforce have melted, And *barbarism* itself have pited him."

Shakspeare: Richard II., v. 2.

**III. Of deficiency in purity of speech:** An impropriety of speech; a form of speech contrary to the rules of a language, and which a foreigner or uneducated person might be expected to use. Such improprieties may be in a phrase, in a word, in spelling, or in pronunciation.

"The language is as near approaching to it, as our modern *barbarism* will allow; which is all that can be expected from any now extant."—Dryden: Juvenal (Dedication).

**I. Of persons:**

1. Foreign, as opposed to Greek or Roman, but without any reflection on the humanity of the person to whom the term was applied.

"And the *barbarous* people showed us no little kindness."—Acts xxvii. 2.

¶ Here the word *barbarous* is used partly in the sense I. 1, and partly in I. 2.

2. Uncivilised; without education or refinement.

"A *barbarous* country must be broken by war before it be capable of government; and when subdued, if it be not well planted, it will effoons return to *barbarism*."—Sir J. Davies: Ireland.

**barber-chirurgion, barber-surgeon, s.** A man who combines the trimming of the beard with the practice of rude surgery. The separation between the humbler calling and the more dignified profession was made by 18 George II.; but the memorial of the former union is still seen in the striped pole and bason sometimes projecting as symbols from the front of a barber's shop. The ribbon round the pole is said to represent the bandage for the arm, and the bason that for the reception of the blood.

"He put himself into a barber-chirurgion's hands, who, by such applications, rarefied the tannour."—*Wielsmann: Surgery.*

**barber-monger, s.** A term of reproach used in Shakespeare. It appears to mean one who has large dealings with his barber or with barbers in general; a fop.

**barberry blight, berberry blight.**

**Bot.:** The English name of a minute fungal, the *Aecidium Berberidis* of Persoon. It occurs on the leaves of the barberry, forming roundish, bright-red spots, consisting of the fruits of the *Aecidium*, which form little cups full of spores when they burst. These spores germinate on the leaves or stems of wheat, send out mycelium into the plant, and produce the disease called rust, which was thought to be a distinct fungus. Several generations of this form grow in the summer, but in the older specimens a darker two-celled spore is produced, which remains on the straw during the winter, and, germinating in the spring, produces spores that cause the barberry blight.

(Dallas: *Nat. Hist.*)

2. A dog, called also the poodle. It is the *Canis familiaris*, var. *aquaticus*. † **Moncrieffe barbette:** A special form of the barbette system invented by Col. Moncrieffe, by which a gun is elevated at the moment of firing, the recoil causing it to disappear, by a movement like that of a child's rocking-horse, into a circular pit sufficiently large to accommodate it and the gunners, thus pro-

tecting both from danger except for the brief period when the piece is being fired. The later devices of similar character, now being constructed by American inventors for the U. S. Government, are far superior to the earlier patterns and are in every way satisfactory.

There are pain, numbness, and partial paralysis of the extremities, with occasional injury to the voice. It is an acute disease, and different from *beriberi* (q.v.). (*Cyclop. of Pract. Med.*) But the writers now mentioned had not personal opportunities of seeing the disease. Dr. Malcolmson of Madras, and Dr. Carter of Bombay, who have had this advantage, consider *barbiers* the same as *beriberi* (q.v.).

**bar-bī-tōn, s.** [Lat. *barbiton* & *barbitos*; Gr. *βάρβιτος* (*barbitos*)] A many-stringed instrument used by the ancients. It is generally said to have been invented by the Greek poet Anacreon, but is more probably of Eastern origin. When this acid is heated with excess of hydriodic acid it is reduced to barbituric acid, which crystallises in prisma with two molecules of water. It is bibasic, and forms salts. Boiled with potash it gives off ammonia, and yields the potassium salt of malonic acid.

1. **Originally:** A poet by profession, especially one whose calling it was to celebrate in verse, song, and play the exploits of the chiefs or others who patronised him, or those of contemporary heroes in general. Bards of this character flourished from the earliest period among the Greeks, and to a lesser extent among the Romans. Diodorus and Strabo, in the first century B.C., allude to them under the name of *βάρδοι* (*bardoi*), and Lucan, in the first century A.D., under that of *baridi*. Tacitus seems to hint at their existence among the Germanic tribes. It was, however, above all, among the Gauls and other Celtic nations that they flourished most.

According to Warton, they were originally a constitutional appendage of the Druid hierarchy. At Llanidni, in Anglesea, formerly inhabited by Druidical conventual societies, vestiges exist of *Tre's Dryn* = the Arch-Druid's mansion; *Bodruddau* = the abode of the inferior Druids; and near them *Bod-owyr* = the abode of the Ovades, i.e., of those passing through their novitiate; and *Tre's Beirad* = the hamlet of the bards.

They may be even considered as essential constituents of the hierarchy, if the division of it into priests, philosophers, and poets be accurate. The bards did not pass away with the Druids, but flourished, especially in Wales, honoured at the courts of princes, and figuring up to the present day at the Eisteddfods or gatherings of bards and minstrels. They were similarly honoured throughout Ireland, and indeed among the Celts everywhere.

¶ (a) Crab thus distinguishes the adjectives *bare*, *naked*, and *uncovered*—"Bare marks the condition of being without some necessary appendage; *naked* simply the absence of external covering; *bare* is therefore often substituted for *naked*, yet not vice versa—e.g., *bare-headed* or *bare-footed*; but a *figure* or the *body* is *naked*. Applied to other objects, *bare* indicates want in general; *naked* simply something external, wanting to the eye—e.g., *bare walls*, a *bare house*; *naked fields*, a *naked appearance*; *bare* in this sense is often followed by the object wanted; *naked* is mostly employed as an adjunct—*bare of leaves*, a *naked tree*. *Naked* and *uncovered* strongly resemble each other; to be *naked* is in fact to have the body *uncovered*, but many things *uncovered* are not *naked*. Nothing is said to be *naked* but what in the nature of things, or according to the usages of men, ought to be covered."

(b) *Bare, scanty, and destitute* are thus discriminated:—"All these terms denote the absence or deprivation of some necessary. *Bare* and *scanty* have a relative sense; the former respects what serves for ourselves, the latter what is provided by others; a subsistence is *bare*, a supply is *scanty*. *Bare* is said of those things which belong to corporeal sustenance; *destitute* of one's outward circumstances in general; *bare* of clothes or money; *destitute* of friends, resources, &c."

(c) The following is the distinction between *bare* and *mere*:—"Bare is used positively, *mere* negatively. The bare recital of some events brings tears; the *mere* attendance at a place of worship is the smallest part of a Christian's duty."

Barebone's Parliament (Hist.): A derisive nickname given to the first Parliament elected under the auspices of Oliver Cromwell. It was so called because it had as one of its members a Puritan leather-seller in Fleet Street known as "Praise God Barebone." It was not a properly representative assembly. Cromwell having requested the several ministers of religion to send in the names of the most pious members of their several congregations, he selected from the lists forwarded to him 139 Englishmen, six Welshmen, four Scotsmen, and six Irishmen, and invited or summoned them to the House of Commons. On the appointed day of meeting (July 4, 1653), a hundred and twenty of the selected members actually presented themselves. Five months subsequently, at the suggestion of Colonel Sydenham, they resigned their authority into the hands of Cromwell, who forthwith began to rule under the title of "His Highness the Lord Protector." Barebone's was sometimes called also the "Little Parliament." Some of its measures were enlightened. It was economic of the public money; it desired the codification of English law, an aim unhappily not yet accomplished; and it provided for the registration of births, marriages, and deaths.

In important bargains or public treaties among the ancient Romans, a swine was sacrificed, the person who gave it the death-blow formally expressing the wish that Jupiter might similarly strike or smite the Roman people if they were unfaithful to their stipulations (see Livy, l. 24). From this, perhaps, came the phrase still common, "to strike a bargain," meaning simply to make a bargain with due formalities. Or there may be a reference to the striking hands mentioned in Prov. xxii. 26; vi. 1; also xi. 15 (margin).

It is a kind of real contract in which the "bargainor" for some pecuniary transaction bargains and sells, that is, contracts to convey, the land of the "barginee," and becomes by such bargain a trustee for, or seized to the use of, the barginee. The Statute of Uses completes the purchase; in other words, the

Its hardness is 2.5–3.5; spec. gr. as much as 4.3–4.72, whence the name Heavy-Spar; its lustre vitreous or slightly resinous; its colour white, yellowish, grayish black, reddish or dark brown. It is sometimes transparent, sometimes almost opaque. When rubbed it is occasionally fetid. It is found as part of the gangue of metallic ores in veins in secondary limestones, &c. It occurs, among other places in England, in Westmoreland, Durham, Derbyshire, Staffordshire, and Cornwall; in Scotland, in Argyllshire, Perthshire, and Aberdeenshire; in many places on the Continent of Europe, in America, and other parts of the world.

Dana thus subdivides Barite:—Var. 1. **bâr-ÿ-üm, s.** [In Ger. *baryum*, from Gr. *Bapvís (barus)* = heavy. It is so named from the great specific gravity of the native carbonate and sulphate.]

**Chem.:** A dyad metallic element; symb. Ba; atomic weight, 137. Barium is prepared by the decomposition of barium chloride, BaCl<sub>2</sub>, by the electric current, or by the vapour of potassium. It is a white malleable metal, which melts at red heat, decomposes water, and oxidises in the air. Barium occurs in nature as barium carbonate and sulphate. Its salts are prepared by dissolving the carbonate in acids, or by roasting the native sulphate of barium with one-third of its weight of coal, which converts it into barium sulphide, BaS; this is decomposed by hydrochloric or nitric acid, according as a chloride or nitrate of barium is required. All soluble salts of barium are very poisonous; the best antidotes are alkaline sulphates. The salts of barium are employed as reagents in the laboratory, and in the manufacture of fireworks to produce a green light. Barium is precipitated as a carbonate, BaCO<sub>3</sub>, along with carbonate of strontium and calcium, by ammonia carbonate. [See ANALYSIS.] Barium can be separated by dissolving the carbonates in acetic acid, and adding potassium chromate, which gives a yellow precipitate of the insoluble barium chromate. Barium salts give an immediate white precipitate on the addition of calcium sulphate, an insoluble precipitate with 4HF.SiF<sub>4</sub> (hydrofluosilicic acid), and a white precipitate insoluble in acids with sulphuric acid or with soluble sulphates; this precipitate is not blackened by H<sub>2</sub>S. Barium chloride gives a green colour to the flame of alcohol, and the spectrum of barium salts contains a number of characteristic green lines.

**barium carbonate.**  
1. **Chem.:** A heavy white powder obtained by precipitating barium chloride or nitrate with an alkaline carbonate. It is nearly insoluble in water. Formula, BaCO<sub>3</sub>.  
2. **Min.:** A mineral, called also Witherite (q.v.).

**barium chloride, BaCl<sub>2</sub>.** A colourless transparent salt, crystallising with two molecules of water in flat four-sided tables. A saturated solution boils at 104.5°, and contains 73 parts of the salt dissolved in 100 parts of water.

**barium dioxide, BaO<sub>2</sub>,** is obtained by gently heating baryta in a current of oxygen gas. It is a grey powder, which when heated to a higher temperature gives off oxygen gas, and is re-converted into baryta.

fâte, fât, fâre, amidst, whât, fâll, fâther; wê, wêt, hêre, camêl, hêr, thêre; pine, pît, sîre, sîr, marine; gô, pôt, or, wôre, wôlf, wôrk, whô, sôn; müte, oüb, üere, ünite, cür, rûle, füll; trÿ, Sÿrian. æ, œ = é. ey = ä. qu = kw.

barium monoxide (or baryta, BaO). A grey porous mass obtained by heating barium nitrate; it forms a hydrate with water (barium hydrate), producing crystals, BaH<sub>2</sub>O<sub>2</sub>.8H<sub>2</sub>O, which dissolve in twenty parts of cold and two of boiling water, forming an alkaline salt, which rapidly absorbs CO<sub>2</sub> from the air, barium carbonate being precipitated. Barium hydrate can also be obtained by decomposing barium chloride in caustic soda.

barium nitrate, Ba(NO<sub>3</sub>)<sub>2</sub>. It crystallises in anhydrous transparent colourless octohedra; they dissolve in eight parts of cold and three parts of boiling water; it is much less soluble in dilute acids.

barium sulphate. 1. Chemistry: BaSO<sub>4</sub>, obtained by adding sulphuric acid or a soluble sulphate to a solution of a barium salt. It is a white heavy powder, insoluble in water or dilute acids. It is used, under the name of *blanc fixe*, as a substitute for white lead in the manufacture of oil paints. 2. Min.: A mineral (sp. gr. 4.5) called also Heavy Spar or Barite (q.v.). The powdered mineral is too crystalline to be used as a white paint.

barium sulphato-carbonate. A mineral, a variety of Witherite.

barium sulphide, BaS, is obtained by roasting BaSO<sub>4</sub> with charcoal. It decomposes by exposure to the air; boiled with sulphur, it yields higher sulphides. Barium sulphide is phosphorescent, and has been used to render the dials of clocks luminous in the dark.

[A.S. bare, berlic = barley (BERE); Wel. barlys (from bara = bread, and lye = a plant) = corn, barley.] A. As substantive: The seeds or grains of various species and varieties of the genus

**Hordium.** That most commonly in cultivation is *Hordium vulgare*, spring or two-rowed barley, especially the rath-ripe and Thanet sorts. *H. hexastichon* (i.e., with the seeds growing in six rows) is the bear or bigg, cultivated in the north of Scotland and elsewhere. *H. distichon*, two-rowed or common barley, is preferred for malting, which is one of the chief purposes for which barley is cultivated. [MALT.] *H. zeorion*, or sprat-barley, is more rare. Perhaps the four so-called species now enumerated may be only varieties of one plant. Barley is the hardiest of all the cereals, and was originally a native of Asia, but it is now cultivated all over the world, even as far north as Lapland. In ancient times it was largely used as an article of food, but the greater proportion of the barley grown in Great Britain is now used in the preparation of malt and spirits. For culinary purposes it is sold in two forms, Scotch or pot barley, and pearl barley, the former being the grain partially deprived of its husk; the latter, by longer and closer grinding, being rounded and having the entire husk removed.

Bread made from barley-meal is darker in colour and less nutritious than that made from wheat flour; but it is cheaper and more easily digested. One pound of barley-meal contains one ounce of flesh-formers and fourteen ounces of heat-givers.

Barley-meal is sometimes adulterated with oat-husks, and is itself used to adulterate oatmeal, and occasionally wheat-flour; but these admixtures are readily detected by the microscope.

"Ich bouhte hare barliche."—*Piers Plowman*. (S. in Boucher.)

† In Scripture "barley," Heb. תרומה (*terumah*), Sept. Gr. κριθή (*krithē*), seems properly translated. The Hebrew term is from תרומה (*terumah*) = hair, from תרם (*tarim*) = to be bristly; referring to the long awns of the body.

**barley-break, barley-brake, barli-break, barli-breake, barley-brake, barley-breake (O. Eng.), barla-brekis, barla-bracks (O. Scotch), s.**

**I.** In England: A game once common in England, as shown by the frequency with which it was alluded to by the old poets, but which is now confined chiefly to Cumberland, where it is denominated *Barley-brigs*. It was played by six young people, three of either sex, formed into couples, a young man and a young woman in each, it being decided by lot which individuals were to be paired together. A piece of ground was then divided into three spaces, of which the central one was profanely termed "Hell." This was assigned to a couple as their appropriate place. The couples who occupied the other spaces then advanced as near as they dared to the central one to tempt the doomed pair, who, with one of their hands locked in that of their partner, endeavored with the other to grasp them and draw them into the central space. If they succeeded, then they were allowed themselves to emerge from it, the couple caught taking their places. That the game might not be too speedily finished, leave was given to the couple in danger of being taken to break hands and individually try to escape, while no such liberty was accorded to those attempting to seize them. Though the name does not occur in the subjoined lines, the game which they describe is that of *barley-break*.

"Then couples three be straight allotted there,  
"Thy of both ends the middle two do fy;  
The two that be mid place Hell called were,  
Must strive, with waiting foot and watching eye,  
To catch of them, and then to Hell to bear,  
That they, as well as they, Hell may supply."  
*Sir Philip Sidney: Arcadia*, l. 158.

† Most authorities consider *barley-break* identical with *base*, 3 (q.v.). Boucher regards it as identical with a game called in Cheshire a *round*, and in Douglas *ring-dancer* and *roun-*

*dels*; but the resemblance is far from being close. (Boucher, Nares, Gifford, &c.)

"At barley-break they play  
Merrily all the day."  
*The Muses' Elysium (Drogon)*, lv. 1471. (Boucher.)  
And give her a new garment on the grass,  
After a course of *barley-break* or *base*."  
*Ben Jonson: Sad Shepherd*, v. 109.  
"He is at *barli-break*, and the last couple are now in Hell."  
*The Virgin Martyr*, v. 1.

**II.** In Scotland. The game is obsolete in the south of Scotland, and is passing into disuse also in the north, Aberdeenshire being the county in which it principally lingers. Jamieson says that it is generally played by young people in a corn-yard, whence it is called *barla-bracks*, signifying "about the stacks." "One stack is fixed on as the dule or goal; and one person is appointed to catch the rest of the company, who run out from the dule. He does not leave it till they are all out of his sight. Then he sets out to catch them. Any one who is taken cannot run out again with his former associates, being accounted a prisoner; but is obliged to assist his captor in pursuing the rest. When all are taken, the game is finished; and he who is first taken is bound to act as catcher in the next game."

1. Originally: A modification of the object-glass of a telescope, suggested by Mr. Peter Barlow, with the idea of avoiding the use of flint glass in the construction of object-glasses of large size; discs of flint glass suitable for optical purposes then being both expensive and rare. He proposed to enclose between two convex lenses a fluid lens equal in refractive power to a flint glass of the same dimensions. This proposal was not generally adopted, and the term "Barlow lens" is now mostly applied to the form of lens described under No. 2.

**BARLOW LENS.**  
A, B. Converging rays from object-glass. C. Barlow lens. D. Focus of the object-glass without the Barlow lens. E. Focus of the object-glass after refraction through C. F, G. Size of image formed by object-glass at D without the Barlow lens. H, I. Enlarged image formed by object-glass and Barlow lens at focus E. A, t. Size of image formed at E by an object-glass of longer focus, and lengthened tube, but without using the Barlow lens.

2. Now: A concave lens inserted in the eyepiece of a telescope before the rays come to a focus, by means of which the focal length of the object-glass or speculum is increased nearly one-half, and the effect is the same as if the tube were proportionally lengthened, the magnifying power being considerably increased. Another advantage of the Barlow lens is the avoidance of the loss of light which would take place if the same magnifying power were produced by using an eye-glass of shorter focus.

I. *As substantiv.* *Ch. Hist.*: Any member of a certain religious order, properly called the Regular Clerks of St. Paul. Its founders belonged to Milan. It arose in the sixteenth century, was approved by Clement VII. in 1532, and confirmed by Paul III. in 1535. The principal occupation of the Barnabites was preaching to sinners. (*Mosheim: Ch. Hist.*, cent. xvi., sect. iii., pt. i., ch. 1.)

II. *As adjective*: Pertaining to any member of the order described under No. I., or to the order itself.

**bar-na-cle (1), \*bär-ni-cle (cle as cöl), s.**

There is no evidence as to its ultimate etymology, and the history is obscure. Skeat thinks that the name of the crustacean and of the bird are distinct, connecting the former with a supposed Lat. *pernacula*, dim. from *perna* = a shell-fish, and the latter with \**hibernicula avis* = the Irish bird. [See def. 2.] Dr. Murray thinks the two names the same.]

2. *Of Birds*: A name for the Bernicle Goose (q.v.). Formerly the absurd belief was entertained that these geese sprang from the barnacles described under No. 1. Max Müller believes that the bird was originally called *Hibernicula*, which was converted into *Bernicula* by the dropping of the first syllable, after which the similarity of the name to the Cirriped led to the two being confounded together and generated the myth. Two species of the genus *Lepas* were called by Linnaeus *Lepas anserifera* and *L. anatifera* = goose-bearing, of course with no belief in the fable suggested by the name.

"There are found in the north parts of Scotland, and islands adjacent called Orcaades, certain trees, whereon do grow certain shells of a white colour tending to russet, wherein are contained little living creatures; which shells in time of maturity doe open, and out of them grow those little living things, which falling into the water doe become fowles, which we call *barncacles*, in the North of England *drant geese*, but in Lanchashire *tree geese*."—*Gerard: Herbal*, p. 144. (*Boucher*).

"As *barncacles* turne so land geese."—*Rudyard*, III. li. 657.

[Wedgwood believes the word to have come from the East, and to have been used originally for some instrument of torture. Most writers, Mahn included, consider it the same as the preceding word. Latham derives it from *binacle*, and Max Müller from Ger. *brille*, O. Ger. *berulem*, a corruption of *beryllus*. Compare Dan. *brens*, *brandgars* = barnacles as defined below, and Fr. *besicles* = spectacles.]

**bär-ö-ma-cröm'-ët-ër, s.** [From Gr. *βάρος* (*baros*) = weight, *μακρός* (*makros*) = long, and *μέτρον* (*metron*) = measure.] An instrument for ascertaining the weight and length of newborn infants.

**ba-röm'-ët-ër, s.** [In Sw., Dan., Dut., & Ger. *barometer*; Fr. *baromètre*; Sp., Port., & Ital. *barometro*; Gr. *βάρος* (*baros*) = weight, and *μέτρον* (*metron*) = a measure.] An instrument used for measuring the atmospheric pressure. The discovery that this pressure might be counterpoised by a column of mercury standing as high in proportion to the thirty-four feet that water in similar circumstances stands, as the specific gravity of water is to that of mercury (the ratio or proportion, it will be perceived, is an inverse one), was made at Florence in the year 1643 by one of Galileo's pupils, the celebrated Torricelli, but was not quite complete when he died, in 1647.

The most common form of barometer is what is called a *Cistern Barometer*. It consists essentially of a straight glass tube about thirty-three inches long, filled with mercury, and dipping into a cistern of the same metal. It is affixed to a mahogany stand, on the upper part of which is a graduated scale to mark the height in inches at which the mercury stands. When complete, a thermometer stands side by side with it to note the temperature at which the pressure of the atmosphere is tested. In Fortin's barometer the base of the cistern is made of leather, and can be raised or depressed by means of a screw; a constant level of the mercury from which to measure the zero

of the scale, unattainable by the ordinary cistern barometer, can be produced by this one; besides which the instrument is more portable. Gay-Lussac's barometer is in the form of a siphon. It has two scales with a common zero point, and graduated in contrary directions. As the one branch, the shorter one, corresponds to the cistern, and the other or longer one to the tube, the difference between the two levels is the true height of the mercury. Bunter's barometer is a slight but valuable modification on that of Gay-Lussac. For the aneroid barometer (that "without moisture") see ANEROID. The general mean at the level of the sea is 29.96 inches. A barometer is popularly termed a *weather-glass*. In order to adapt it for this purpose Hooke devised what is called the *wheel-barometer*. It is a syphon barometer, having in its shorter leg a float, a string from which passes over a pulley, and is connected with a weight somewhat lighter than the float. To the pulley is affixed a needle, which moves round a circle graduated to represent the different variations in the weather. [WEATHER-GLASS.] Speaking broadly, a barometer rises for good and falls for bad weather, but there are exceptions to this rule. The more accurate statement is that with S.W., S.E., and W. winds the mercury falls for rain. If it do so rapidly, the probability is that a heavy storm is approaching; if slowly, continued bad weather is to be expected. It rises, if rapidly, for unsettled weather; if gradually, for fine settled weather. A rise, with wind veering N.E., may be indicative of rain.

**Bot.**: A fraudulently constructed natural history specimen, called also the Scythian Lamb, and represented as being half animal and half plant. In reality it is a woolly-skinned fern (*Cibotium barometz*), stripped of everything but its root-stock and the stipes or stalks of four of its fronds, and then turned upside down. Of course no naturalist would for a moment be deceived by a deception so easily detected. (*Lindley*.) [See figure under the name *Agnus Scythicus* (Scythian Ismh.).]

In *Sansc.* also *barra*, and *bharta* are = husband, and may be compared with *baron* in the phrase *baron and feme* (see A., III.). Compare, also Hebrew *בָּרָא* (*geber*) = a man.]

**A. Of persons:**  
† **I. Old Law:** A husband in relation to his wife, used in the old phrase *baron and feme* =

husband and wife. (*Blackstone: Comment.*, bk. 1, ch. 15.)

**II. History & Law:**

**\* I. Formerly:**

(1) At first apparently every lord of a manor, of which sense the expression *court-baron* is still a memorial. [COURT-BARON.] The Magna Charta granted in King John's time seems to show that originally all lords of manors, who held of the king *in capite*, had seats in the Great Council or Parliament; but their numbers becoming too large for proper deliberation, the king summoned only the greater barons in person, leaving it to the sheriff to convene the smaller ones to another house, which was a very important step in making the separation which at present exists between the Houses of Lords and Commons. (*Blackstone*, bk. 1, ch. 3.) [BARONY.]

Hence \* (2) the term *baron* came to be confined to the lords of manors summoned by the royal writ in place of by the sheriff. The writ ran "Hac vice tantum." (*Blackstone: Ibid.*)

*Barons by ancient tenure* were those who held certain lands or territories from the king, who, however, still reserved the tenure in chief to himself.

*Barons by temporal tenure* were those who held their honours, castles, and manors as heads of their barony, that is, by grand serjeanty. By their tenure they were summoned to Parliament; now they are not entitled to be there till a writ is issued in their favour.

(3) Richard II. made the term *baron* a mere title of honour, by conferring it on various persons by letters patent. (*Blackstone*, bk. 1, ch. 3.)

The first baron by patent was John Beauchamp of Holt, who was raised to the peerage by Richard II., in the eleventh year of his reign, October 10, 1387, by the title of Baron of Kidderminster. No other instance occurs until 10 Henry VI.

**2. Now:**

(1) Any nobleman belonging to the lowest order of the peerage—that immediately beneath the rank of viscount. His style is "The Right Hon. Lord —," and he is addressed as "My Lord." In general, in place of being called "Baron, he is simply termed "Lord A." or "B." His coronet has six large pearls set at equal distances on the chaplet. His coronation robes are like those of an earl, except that he has only two rows of spots on each shoulder. At present (1892) there are 294 temporal barons in the House, with 24 bishops, who are also regarded as barons, but they take precedence over the temporal barons.

CORONET OF A BARON.

(2) Anyone holding a particular office to which the title *baron* is or was attached, as the Chief Baron and the Barons of the Exchequer. [EXCHEQUER.] Formerly there were also Barons of the Cinque Ports, viz., two to each of the seven following towns: Hastings, Winchelsea, Rye, Romney, Hythe, Dover, and Sandwich. Till the Reform Bill of 1832 these had seats in Parliament. Instead of these barons there is now a Warden of the Cinque Ports.

"They that bear  
The cloth of honour over her, are four barons  
Of the cinque ports."  
*Shakesp.: Henry VIII.*, iv. 1.

**III. Heraldry.** *Baron and Feme* is the term applied where the coats of arms of a man and his wife are borne *per pale* in the same escutcheon. If the woman is not an heiress, then the man's coat is on the dexter side, and the woman's on the sinister; if she is, then her coat must be borne by the husband on an escutcheon of pretence.

**B. Of things.** *Baron of Beef:* Beef in which the two sirloins are not cut asunder, but joined together by the end of the backbone. Dr. Brewer says that it is "so called because it is the baron (back part) of the ox, called in Danish the *rug*. It is not so called because it is 'greater' than the sir-loin."

**baron-court, s.** The same as COURT-BARON (q.v.).

\* **bār-ōn-ā-dŷ, s.** [Eng. *baron*.] The dignity of a baron; the barons collectively; the baronage.

"Some that were honoured with the dignity of *baronady*."—*Sir John Ferris: Dedic. pref. to a History of Genetrix* (1846). (*J. H. in Boucher*.)

**ba'-rōn-āge, \*bar-nāge (āge = īg), s.** [Eng. *baron*; -*age*. In Fr. *baronnage*; O. Fr. *barnage, barnage, barnes*; Prov. *barnaige* = baronage; *Ital.* *baronnaggio* = barony.]

1. The barons of England viewed collectively; the whole body of barons.

"That authority which had belonged to the baronage of England ever since the foundation of the monarchy."—*Macaulay: Hist. Eng.*, chap. xix.

2. The dignity, status, or position of a baron.

3. The land or territory from which a baron derives his title.

4. A book containing a list of the barons; a Peerage.

**bār-ōn-ēss, s.** [Eng. *baron*; -*ess*. In Sw. *baronessa*; Dan. and Ger. *baroness*; *Dut.* *barones*; Sp. *baronesa*; Port. *baronesa*; *Ital.* *baronessa*.] A female baron, the wife or lady of a baron, or a lady who holds the baronial dignity in her own right, as "Angela Georgina Burdett-Coutts, first Baroness."

**bār-ōn-ēt, \*bār-rōn-ēt, s.** [In Sw., Dan., *Dut.*, and Ger. *baronet*; Fr. *baronnet*; *Ital.* *baronetto*; *Low Lat.* *baronetus*, dimin. of *baron* (q.v.).]

\* **I. Originally:** A term apparently in use as early as the time of Edward III. for certain lauded gentlemen not of the dignity of lords, summoned to Parliament to counterbalance the power of the clergy.

"... King Edward the Third (as I remember) who, being greatly bearded and crossed by the lordes of the cleargye... was advised to directe out his writtes to certayne gentlemen of the best abillite and trust, entitling them therein barons, to serve and sitt as baronne in the next Parliament. By which meanes he had see many barrons in his Parliament, as were able to walke downe the cleargye and they freude, the which barons, they say, were not afterwards lordes but only *baronnets*, as sundrye of them doe yet retayne the name."—*Spenser: State of Ireland*.

**II. Subsequently:** The name given to three titled orders.

1. *Baronets of Great Britain:* A titled order, the lowest that is hereditary. Speaking broadly, they rank in precedence next after the nobility, or, more specifically, next after the younger sons of viscounts and barons; but in reality they are inferior to the Knights of the Order of St. George or of the Garter, certain official dignitaries, and knights-banerets created on the actual field of battle. The order was instituted by James I., on May 22nd, 1611, to raise money by fees paid for the dignity, and thus obtain resources for the settlement of Ulster. The number was to be limited to 200; but a device for increasing an honour so profitable to the Treasury was soon found, so that before the death of Charles I. 458 patents for the creation of baronets had been issued; and by the end of 1878 there were 698 baronets in existence. The dignity is generally confined to the heirs male of the grantee. The badge of a baronet is sinister, a hand gules (= a bloody hand) in a field argent. Etiquettes require that he be addressed as "Sir A. B., Bart."

2. *Baronets of Ireland:* A titled order instituted by James I. in 1619. It is believed that this dignity has not been conferred on any one since the union of Great Britain and Ireland in 1801, but many of the titles granted before the union still remain in the British baronetage.

3. *Baronets of Scotland:* A titled order planned by James I., but actually instituted, not by him, but by Charles I. in 1625, just after the accession of the latter monarch to the throne. The object aimed at in the creation of the order was the planting of Nova Scotia (New Scotland). Each baronet by his patent received eighteen square miles of territory on that colony, with a sea-coast bounding it on one side; or a tract of land extending for three miles along a navigable river, and stretching for six miles inland. Since the union between England and Scotland in 1707, no baronets have been created holding rank in the latter country alone, but some titles existing previously still figure in the British baronetage.

† **bār-ōn-ēt, v. t.** [From *baronet*, s.] To raise to the rank of a baronet; to confer the title of baronet on.

"The unfortunate gentlemen whom I notice as being knighted or *baroneted*."—*Mortimer Collins: Two Knights*, iii. 210. (*N. E. D.*)

† The sepoy of the Indian army are still housed in this way, and the case was formerly the same with the ordinary English soldiers. (See an example from Gibbon in *Wedgwood's Dict. of Eng. Etym.*, 2nd ed., 1872, p. 49.)

† As a writer in the *Penry Cyclop.* shows, the word *barrack* does not occur in our older dictionaries, though it is found in Phillips's *World of Words*, fol. 1706. In 1720 an effort was made to erect barracks in London, under the false pretence that they would be used as hospitals for those who might be seized by the plague, which, though extinct in England, was then raging at Marseilles. The device was, however, seen through, and had to be abandoned. The first permanent barracks were erected just before 1739; but even as late as the French revolutionary war, opposition was made to their being built on an extensive scale, their existence being considered dangerous to civil liberty. At length the perilous character of the contest with France made it absolutely essential that barracks should at once be erected in various places, and in 1792 the work was undertaken in earnest. By the end of 1819 more than three millions of pounds had been expended in carrying it out.

Shortly after the Revolution of 1688 more vehement resistance than that given to the erection of barracks had been offered to the retention of a standing army. [ARMY.] The fidelity of the British soldiers, so markedly contrasting with the frequent disloyalty of the modern Spanish troops or of the old Roman

praetorian guards, has long since procured universal tolerance in England both of a standing army and of barracks for its accommodation.

This feeling about barracks never extended to the United States, and our soldiers have always been well housed, with excellent provisions for comfort and accommodation.

**bār-ris-tēr**, \* **bār-ras-tēr**, \* **bār-rēt-ēr** (2), s. [Apparently from *bar*, referring to the fact that a barrister pleads at the bar. Other etymologies have been given.] A member of the legal profession who has been admitted to practise at the bar; a counsellor-at-law. [COUNSELLOR, COUNSEL.] In old law-books barristers were styled *apprentices*, *apprenticii ad legem*, being regarded as mere learners, and not qualified to execute the full office of an advocate till they were of sixteen years' standing; now a barrister of ten years is held competent to fill almost any kind of office. No one who has not been called to the bar can plead in the Superior Courts at Westminster, or, as a rule, in any court presided over by a superior judge. Formerly a distinction was drawn between *uter* (= outer) barristers, who on public occasions in the Inns of Court were called from the body of the hall to the first place outside the bar, whilst the benchers and readers were called *inner*. In the Inns of Court a distinction was formerly drawn between *Inner Barristers*, who on public occasions occupied a place on a raised dais separated from the rest of the hall by a bar, and *Outer* (i.e., *Outer*) *Barristers*, who were called from among the students to the first place outside the bar. The distinction has long been abolished, the term *barrister* being now used for what were formerly termed *Inner Barristers*, whilst the *Outer Barristers* have sunk again into the rank of students, from which they were taken. In Queen Elizabeth's reign the Outer Barristers were allowed to practise in law courts, but under most other English sovereigns they simply took part in readings and moots at the Inns of Court. A now obsolete regulation, made in 1603, required that no one should be allowed to study for the bar unless he were a gentleman by descent; but at least since 1762, study for the bar has been open, on certain conditions, to any member of the community. A barrister can be disbarred, appeal, however, being allowed him to the judges. The Irish bar is regulated almost exactly like that of England. In Scotland there is a difference of name, barristers being called *advocates*. In America *Attorney* is the ordinary term.

Bartholomew's tide. The festival of St. Bartholomew is celebrated on the 24th of August, and St. Bartholomew's tide is the term most nearly coinciding with that date.

Two great historical events have occurred on St. Bartholomew's day, one in France, the other in England.

(a) On the 24th of August, 1572, Paris disgraced itself by the atrocious and treacherous massacre of the Admiral Coligny and an immense multitude of less distinguished Huguenots, one chief instigator of this crime being the queen-mother, Catherine de Medici, and her son Charles IX., who became an accessory before the event, lending it the sanction of his royal name. A papal medal, with the inscription Huguenotum strages, struck to commemorate the event, was obtainable at Rome till a few years ago. The crime of the 24th of August, 1572, is generally called by Protestant writers "the Massacre of St. Bartholomew," and sometimes in English narrative simply "the Bartholomew."

(b) On the 24th of August, 1662, about 2,000 clergymen, unable conscientiously to sign adherence to the Act of Uniformity, had to leave their livings in the Church of England and make way for others who could accept that Act.

2. *Spec.*: A trap rock consisting of augite, felspar, and iron intimately blended, olivine also being not unfrequently present. Other minerals are also occasionally present, one being labradorite. It is distinguished from dolerite, or dolerite, by its possessing chlorine disseminated through it in grains.

The specific gravity of basalt is 3.00. It so much tends to become columnar that all volcanic columnar rocks are by some people called basalt, which is an error. There are fine columnar basalts at the Giant's Causeway in the north of Ireland; in Scotland at

BASALTIC COLUMNS.

**bas bleu** (a silent), *s.* [Fr. *bas* = a stocking; *bleu* = blue.] A “blue-stocking,” originally a lady more attentive to literature than to personal neatness; hence applied to any literary lady. [BLUE-STOCKING.]

What is *base* excites our abhorrence; what is *vile* provokes disgust; what is *mean* awakens contempt. *Base* is opposed to magnanimity; *vile* to noble; *mean* to generous. The base or base-line, on the correctness of which the accurate fixing of nearly every place in Britain on the Ordnance Maps depends, was measured on the sands of the sea-shore, along the east side of Loch Foyle, in the vicinity of Londonderry. Base-lines have been laid widely in the United States, in connection with the Coast Survey.

**base-bag, s.**

*Baseball.* A small stuffed bag which marks the location of first, second, and third bases.

**base-ball, s.**

1. The very popular national ball game of the United States; an evolution from the old English game of Rounders. This game is played by two teams of nine players each. A diamond-shaped space, 90 feet square, is marked out, whose angles are called bases; the batsman standing at the home base, the pitcher about the centre of the diamond. After striking the ball the batsman runs to first base, and on successive strikes endeavors to run from base to base until home base is reached, when he scores a run. The fielders of the other team seek to catch the ball in the air, when the batsman is declared out; or to throw it to a base keeper, who endeavors to put the batsman out by touching him with the ball before he can reach the base. Nine innings constitute a game, and the side scoring the most runs wins. If the batsman fails to strike three balls fairly delivered he must run or is put out. Four unfair balls entitle him to a base. This game is highly popular in this country, and the membership of professional, college and amateur clubs amounts to hundreds of thousands of young men and boys.

2. The ball used in the game.

**base-bar, s.**

**A. Ordinary Language:**

**I.** A light and airy vessel made of plaited osiers, twigs, or similar flexible material, much used in domestic arrangements.

¶ The baskets made by the old inhabitants of Britain were so good that they became celebrated at Rome, and were called by a Latin name which was confessedly only their native appellation pronounced by foreign lips. Martial thus speaks of them: "Barbara de plectis venit bascauda Britannis" ("The barbarian basket came from the painted Britons"). By "barbarian" he probably meant made by foreigners, as contradistinguished from Romans, and did not mean in any way to impeach the excellence of the manufacture. Mr. Freeman (*O. Eng. Hist. for Children*) instances *basket* as one of the few Welsh words in English, and points out that the small number that do exist are mainly the sort of words which the women, whether wives or slaves, would bring in. From this and other facts, he infers that in what at the end of the sixth century had become England, the prior inhabitants had been all but extirpated by the Anglo-Saxon invaders.

In our own country public baths are of comparatively recent introduction, though they are now completely rooted throughout the several cities and towns.

"I was surprised to see several machines out, both of the Municipal and Pavilion *Baths*."—*Times*, Sept. 26, 1879: *The Bathing Accident at Boulogne*.

*B. Technically*:

*I. Med.*: Any substance which constitutes the medium in which the human body, or a part of it, is immersed for the maintenance or recovery of health or strength. The most common media are water of various temperatures, watery vapours, and air.

1. *A Water Bath*. This may be *natural* or *artificial*. Rivers, lakes, and the sea afford facilities for a *natural* bath; various public and private appliances are designed to furnish an *artificial* one. In the latter case the temperature of the water may be varied at pleasure. Arranged by temperature, six kinds of baths are in use for medical or other purposes:

Name of Bath.	Temperature.
(a) A cold bath . . .	35° to 60° Fahr.
(b) A cool bath . . .	60° to 75° "
(c) A temperate bath . . .	75° to 85° "
(d) A tepid bath . . .	85° to 92° "
(e) A warm bath . . .	92° to 98° "
(f) A hot bath . . .	98° to 106° "

All baths below 88° in temperature impart the sensation of cold, those above it of heat. In an artificial bath, not merely can the temperature be raised or lowered at pleasure, but various methods may be adopted of applying the liquid. A bath may be taken by the person walking or plunging into it; by his more or less completely lying down in it; by the sudden effusion of water upon him from above, called the *shower-bath*; or by his being sprinkled with it, or applying it to himself by means of a sponge. Or a stream of water may be turned upon him, in which case the name applied is a *douche* or *douse*, from Ital. *doccia* = *douche*. Or only a part of the body may be immersed, as in the *hip-bath* and the *foot-bath*. Moreover, the water employed may be saline or impregnated with other constituents, as

böü, böy; pöüt, jöwl; cat, çell, chorus, çhin, bench; go, gem; thin, this; sin, as; expect, Xenophon, exist. -ing. -cian, -tian = shan. -çion, -tion, -sion = shün; -tion, -çion = zhün. -tious, -sious = shüs. -bie, -dle, &c. = bël, çel.

sulphur, iodina, or, in the case of a foot-bath, mustard.

2. *A Watery-vapour Bath.* If it is intended that the vapour should be breathed, there are three grades of temperature in the vapour bath: the first from 90° to 106°, the second from 106° to 120°, and the third from 120° to 160°. If not intended to be breathed, there are also three: the first from 90° to 100°, the second from 100° to 110°, and the third from 110° to 130°.

3. *An Air Bath:* The exposure of the naked body to the atmosphere of a room of a certain temperature varying from 90° to 130°.

4. *Photography:* A solution in which plates or papers are immersed or floated, or the vessel holding such solution. Baths are known as sensitizing [NITRATE OF SILVER], fixing, toning, or washing.

III. *Heraldry, &c. Order of the Bath:* An order of knighthood, so called because the recipients of the honour were required formally to bathe the evening before their creation. It was instituted by Henry IV. in 1399, and, having fallen into disuse, was revived by George I. in 1725. Under George IV. its regulations were modified, and now there are various sub-divisions of the order—viz., Knights Grand Cross of the Bath (G.C.B.), Knights Commanders of the Bath (K.C.B.), and Companions of the Bath (C.B.). Under each of these classes there are now a military and a "civil" (meaning a civilian) sub-class. The ribbon worn by the Knights of the Bath is crimson, with the Latin motto, "*Tria juncta in uno*" = three (England, Ireland, and Scotland, or their emblems, the rose, shamrock, and thistle) joined in one.

*Biol.:* A peculiar slimy matter dredged up in the North Atlantic, in 1857, from a depth of 8,000 to 25,000 feet, by the crew of the *Cyclops*, when examining what has since been called the "Telegraph Plateau," for the deposition of the Atlantic Telegraph Cable. Specimens of this viscous mud, examined by Prof. Huxley in 1858, were re-examined by him with higher microscopic power in 1868, when he came to the conclusion that they contained a protoplasmic substance apparently existing in masses over wide areas of ocean-bottom. Minute bodies, which he had before called coccoliths, of two forms [COCCOLITH], were believed to stand to the gelatinous protoplasm in the same relation as the spicula of sponges to the softer parts of the animal. Professor Haeckel, after examining the slimy substance, adopted the views of Professor Huxley, and attributed the origin of the protoplasmic substance, though not dogmatically, to spontaneous generation. It was named after him, by Prof. Huxley, *Bathylbius Haeckelii*. The naturalists of the exploring vessel *Porcupine*, in 1868, stated that they had found *Bathylbius* alive, but considered it to be derived from sponges, &c. Those of the *Challenger*, however, failed to find it in the parts of the ocean which they dredged over, and propounded the hypothesis that the *Bathylbius* was nothing more than a precipitate from the sea-water by the alcohol in which the specimens had been preserved. More recently, again, the Arctic navigator Bessels, of the *Polaris*, considered that he had found masses of undifferentiated protoplasm in the Greenland seas. The existence of *bathylbius* is not now admitted. (*Q. J. Microscop. Soc.*, 1868, p. 210; *Proc. Roy. Soc.*, vol. xvii., 186-1; *Prof. Allman's Presidential Report at British Association Meeting at Sheffield* in 1870.)

¶ In some editions it is "*battalia* troubles."

2. An assemblage of companies; and the tactical and administrative unit of infantry—that is, the first body that is, as a rule, used independently, and commanded by a field officer (major or lieutenant-colonel). It consists of from four to ten companies, and is generally about 1,000 strong on a war footing.

(a) *English battalions* are formed of ten companies for administrative and eight for tactical purposes. The first twenty-five regiments have two battalions, the remainder, originally of one battalion each, are now linked in pairs according to their territorial derivation. Linked battalions are interchangeable as regards officers, and each shares the honors and advantages of the other. Two regiments of Rifles have four battalions each, and the three regiments of the Guards seven battalions in all.

The peace strength of a battalion is about 400 men, but varies; its war strength in the field is 1,000 men.

(b) *United States battalions.* A battalion in this country consists of two, four, six, eight, or ten companies, according to circumstances, and is commanded by the senior officer present. The number of enlisted men in a battalion varies from 100 to 1,000 in accordance with the minimum or maximum organization of the army.

(c) *French battalions.* By the laws of the 2nd of December, 1874, and January 20 and March 13, 1875, the French Infantry is divided into (1) Infantry of the Line, (2) Regiments of Zouaves, (3) Regiments of Tirailleurs Algériens, and (4) Battalions of Chasseurs à Pied. The 144 Regiments of Infantry of the Line have each four battalions; a battalion (which is divided into four field companies) consisting of 12 commissioned officers, 54 non-commissioned officers, and 264 soldiers—in all 330 men, raised in time of war to 1,000 men. The Regiments of Zouaves have, in peace, 612 men in a battalion, and in war 1,000. The Tirailleurs Algériens, who in time of peace are always in Algeria, or at least have been so for the last eight years, have, in peace, 652 men in a battalion, and in war 1,000 men. Finally, the Chasseurs à Pied have, in peace, 468 men, and in war 1,000 men.

(d) *German battalions.* With the exception of the 116th (Hesse) Regiment, the 148 Line Regiments have three battalions. The Yägers are formed into twenty-six separate battalions. To each line regiment is attached a Landwehr regiment of two battalions, and these latter bear the same number as the regular regiments to which they are affiliated. The five Prussian Guard Regiments have 22 officers and 678 men per battalion in peace time, the remaining regiments having 18 officers and 526 men per battalion, and the Yägers 22 officers and 526 men. On mobilisation for war all battalions are raised to a strength of 22 officers and 1,000 men, with a regimental staff of one commandant, one extra field officer, and one aide-de-camp. Pioneer battalions are practically field engineer bodies, and are divided into Pontoniers (for bridging), and Sappers and Miners (for siege operations, demolitions, or the construction of artificial defences). They have each three field and one depot company; the former comprising fifteen officers and 650 men.

**II. In Oxford:** To stand indebted in the college books for what is expended in purchasing provisions at the buttery (*size* is the corresponding term at Cambridge). (*Todd.*)

[BATELER.] (In this sense Skinner and Boucher derive *battel* from Dut. *bataalen* = to pay, whence may be derived the Eng. *tail* = a reckoning, *tell* = reckon, and *tally*. In *Todd's Johnson* it is derived from Sax. *tellan* = count, with the prefix *be*.)

**battering-ram**, *s.* An ancient military engine used for battering down walls. It existed among the Assyrians. See the engraving, taken from a tablet dated about 880 B.C. In its most perfect form among the Romans it consisted of a pole or beam of wood sometimes as much as 80, 100, or even 120 feet in length. It was suspended by its extremities from a single point or from two points in another beam above, which lay horizontally across two posts. When at rest it was level, like

the beam above it. When put in action against a wall, it was swung horizontally by men who succeeded each other in constant relays, the blow which it gave to the masonry at each vibration being rendered all the more effective that one end of it was armed with iron. This, being generally formed like a ram's head, originated the name *aries* (ram), by which it was known among the Romans, and *battering-ram*, which it obtains among ourselves. A roof or shed covered it to protect the soldiers who worked it from hostile missiles, and to facilitate locomotion it was placed on wheels.

† **I.** The act of beating or battering.  
† **II.** The state of being beaten or battered;  
a legal action raised in consequence of having been beaten. [B., I.]

† **III.** The wound or other injury produced by a beating.

1. *Lit.:* A wound or other injury of the body. [B., I.]

"... may increase the damages at their own discretion; as may also be the case upon view of an atrocious battery. But then the battery must likewise be alleged so certainly in the declaration that it may appear to be the same with the battery inspected."  
*Blackstone: Comment., bk. III, ch. 22.*

2. *Fig.:* A wound or impression on the heart.  
"For where a heart is hard, they make no battery."

O'erturn the mountain, and the forest shake."  
*Blackmore.*

(b) An argument.  
"Earthly minds, like mud walls, resist the strongest batteries."  
*Locke.*

**B. Technically:**

**I. Law:** The unlawful beating of another, or even the touching him with hostile intent. It is legitimate for a parent or a master to give moderate correction to his child, his scholar, or his apprentice. A churchwarden or beadle may gently lay hands on a person disturbing a congregation. A person, also, who is violently assailed by another may strike back in self-defence. He may do so also in defence of his property. But to strike any one in anger, however gently, without these justifications, exposes one to the liability to be prosecuted for assault and battery, the assault being the menacing gesture and the battery the actual blow. [ASSAULT.] Wounding and mayhem are more aggravated kind of battery. (*Blackstone: Comment., bk. III, ch. 8.*)

**II. Military:**

1. *Breaching (siege) battery:* One placed as close as possible to the object to be destroyed; as the stone revetment of a fortress.

2. *Counter or direct (siege) battery:* One intended to crush the opponent's fire by an equal number of heavy guns.

3. *Cross batteries:* Two batteries playing on the same point from two different positions.

4. *Elevated (siege) battery:* One in which the gun platforms are on the natural level of the ground.

5. *Enfilading battery:* One which is placed on the prolongation of the line occupied by the enemy.

6. *Fascine battery:* One made of fascines.

7. *Floating battery:* A heavily armed and armoured vessel intended for bombarding fortresses and not for sea cruising.

8. *A gabion battery:* One built up of gabions.

9. *Half-sunken battery:* One in which the terreplein is sunk two feet below the level of the ground.

10. *Masked battery:* One that is concealed from view of the enemy by brushwood or the non-removal of natural obstacles in front until it is ready to open fire.

11. *Mortar battery:* One without embrasures in the parapets, and the platform is horizontal. The shells are fired over the parapet at an angle of 45°.

12. *Open batteries:* Those which are not protected by earthen or other fortifications.

13. *Ricochet battery:* One in which the guns are placed on the prolongation of the front of an enemy's battery, so that by firing low charges the shot or shell may be made to bound along inside the work and dismount the guns.

14. *Sand-bag battery:* One constructed in rocky or sandy sites of sand-bags filled with earth or sand.

15. *Screen (siege) battery:* One in which the actual gun battery is protected by a low earthen screen placed parallel to and a short distance from the main battery.

16. *Sunken (siege) battery:* One in which the gun platforms are sunk three feet below the surface.

17. A certain number of artillerymen united under the command of a field officer, and the lowest tactical unit in the artillery. In a battery there are gunners who work the guns, and drivers who drive the horses by which these guns are transported from place to place. Batteries are usually distinguished as *Horse, Field, and Garrison*. The first two consist of six guns each.

(1) *Horse batteries* are those in which the gunners are carried partly on the carriage and partly on horse.

(2) *Field batteries* are those in which all the gunners are carried on the carriage; and these are divided again into (a) Mountain and (b) Position Batteries.

(3) *Garrison batteries* are those bodies of foot artillerymen who have to serve and mount the heavy guns in forts or coast batteries.

**III. Physics:**  
1. *An Electric Battery:* One consisting of a series of Leyden jars [LEYDEN JAR], the ex-

ternal and internal coatings of which are respectively connected with each other.

2. *A Magnetic Battery or Magazine:* One consisting of a number of magnets joined together by their similar poles.

3. *A Thermo-electric Battery:* One in which a number of thermo-electric couples are so joined together that the second copper of the first is soldered to the bismuth of the second, the second copper of this to the bismuth of the third, and so on. It is worked by keeping the odd solderings, for instance, in ice, and the even ones in water at a temperature of 100° Fahr.

4. *A Voltaic Battery or Voltaic Pile:* A battery or pile constructed by arranging a series of voltaic elements or pairs in such a way that the zinc of one element is connected with the copper of another, and so on through the whole series. The first feeble one was made by Volta, who used only a single pair. [VOLTAIC PILE.] There are two forms of it, a *Constant Battery* and a *Gravity Battery*.

VOLTAIC PILE.

(a) *A Constant Battery, or Constant Voltaic Battery:* One in which the action continues without material alteration for a considerable portion of time. This is effected by employing two liquids instead of one.

The first and best form of constant battery is called a Daniell's battery, after its inventor, who devised it in the year 1836. It consists of a glass or porcelain vessel containing a saturated solution of sulphate of copper, immersed in which is a copper cylinder open at both ends and perforated by holes. At the upper part of the cylinder is an annular shelf perforated by holes, and below

DANIELL BATTERY.

the level of the solution. Inside the cylinder is a thin porous vessel of unglazed earthenware, and inside this last a bar of zinc is suspended. Two thin strips of copper are fixed by binding-screws to the copper and to the zinc; and several of these cylinders, connected together by nailing the zinc or one to the copper of the next, form a battery. To keep it in action, crystals of sulphate of copper to replace those consumed are placed on the annular shelf, and in the porous vessel is placed a solution of salt or diluted sulphuric acid along with the bars of amalgamated zinc. As the several chemical elements now mentioned act on each other, a constant stream of electricity is evolved. To this type belong Callaud's and Menotti's batteries. (*Atkinson: Ganot's Physics*, bk. x., ch. 1.)

(b) *A Gravity Battery*: One in which the separation is produced by the difference of gravity in the substances themselves. To this type belong Callaud's and Menotti's batteries. (*Atkinson: Ganot's Physics*, bk. x., ch. 1.)

**battery-resistance**, *s.* Resistance occurring in connection with a voltaic or other battery.

—*Eccles.* ix. 11.

**B. Technically:**

**1. Law.** *Trial by battle, or wager of battle (or battel, as the spelling was)*: A barbarous method of deciding in the court of last resort, by personal combat, all civil and criminal questions turning on disputed matters of fact. The practice seems to have been immemorially in use among the Northern nations; the Burgundians reduced it to stated forms about the end of the fifth century; from them it passed to the Franks and Normans, and through William the Conqueror came to be established in England. It was used (1) in courts-martial, or courts of chivalry and honour; (2) in appeals of felony; and (3) upon cases joined in a writ of right—the last and most solemn decision of real property. In civil actions the parties at variance appointed champions to fight for them, but in appeals of felony they had to do so themselves. The weapons were batons of an ell long, and a four-cornered target. The combat went on till the stars appeared in the evening, unless one of the combatants proved recreant and cried craven. If he did so, or if his champion lost the craven, Divine Providence was supposed to have decided that his cause was bad. If the one who thus failed was appellant against a charge of murder, he was held to have done the felonious deed, and without more ado was hanged. Henry II. struck the first blow at the system of trial by battle by giving the defendant in a case of property the option of the grand

assize, then newly introduced. The last trial by battle in the Court of Common Pleas at Westminster was in the year 1571, the last in the provinces in 1638. The case of Ashford v. Thornton, in 1818, having nearly led to a judicial duel of the old type, the Act 59 Geo. III., chap. 46, passed in 1819, finally abolished trial by battle. Montecuculi traces both *duelling* and knight-errantry back to the trial by battle. (*Blackstone: Comment.*, bk. iii., chap. 22, and bk. iv., chaps. 27, 33, &c.)

**2. Nat. Science.** *Battle of life.* [A., III. 2 (b).]

† Crabb thus distinguishes the words *battle*, *combat*, and *engagement*:—"Battle is a general action requiring some preparation; *combat* is only particular and sometimes unexpected. *Combat* has more relation to the act of fighting than *battle*, which is used with more propriety simply to denominate the action. "In the *battle* the *combat* was obstinate and bloody." In this sense *engagement* and *combat* are analogous, but the former has a specific relation to the agents and parties engaged, which is not implied in the latter term. We speak of a person being present, or wounded, or fighting desperately in an *engagement*; on the other hand, we speak of *engaging* in a *combat*, challenging to single *combat*, &c. *Battles* are fought between armies only; they are gained or lost. *Combats* are entered into between individuals, in which they seek to destroy or excel. *Engagements* are confined to no particular number, only to such as are *engaged*. A general *engagement* is said of an army when the whole body is *engaged*; partial *engagements* respect only such as are fought by small parties or companies of an army."

**battle-array**, *s.* The array or order of battle.

"Two parties of fine women, placed in the opposite side boxes, seemed drawn up in *battle-array* one against the other."  
—*Addison.*

**battle-axe (Eng.), \* battar-ax (Old Scotch), s.**

**1. Lit.:** A weapon like an axe, formerly used in battle.

"But little effect of speir or *battar-ax*."

"Four men-at-arms came at their backs,  
With halbert, bill, and *battle-axe*."  
*Scott: Marmion*, l. 8.

† In the first example Jamieson considers that *battar-ax* may be an error of an early transcriber for *battal-ax*; if not, then it is directly from Fr. *battre* = to beat.

**2. Fig.:** Military power. The *battle-axe* in Jer. li. 20 is the military power by the instrumentality of which God should execute his judgment on Babylon.

**battle-bed**, *s.* The "bed" on which a slain soldier is left to repose after a battle.

† Occasionally used figuratively for the watchword of parties engaged in warfare of another kind—*e. g.*, political or social.

batlle-ship, s. A heavily armored warship of the largest class, carrying guns of the heaviest calibre, stronger and less speedy than a cruiser, larger and more seaworthy than a monitor. Battleships of to-day are really floating fortresses of toughened steel. Their armor ranges from 8 to 18 inches in thickness, being heaviest amidships, to protect the machinery, and upon the turret-like structures in which the main battery is mounted. Four guns of 13-inch calibre are carried by the "Indiana" of our navy, which is conceded to be the finest and most effective battleship afloat. Two of these monster guns are located in each main turret. The secondary batteries, composed of smaller rifles, rapid-fire guns, and gellings, are located in the sponsons, on the gun-decks and upon the military tops. "Kentucky," and other battleships of her type, the construction of which was begun in January, 1896, will have two turrets, one above the other, at either end of the fortress, the upper turrets mounting two 8-inch and the lower turrets two 12-inch rifles. All four of these guns may be trained on a given spot and discharged at once, delivering a blow that would annihilate the strongest adversary ever constructed. The hulls of warships of the "Indiana" type are so constructed with watertight compartments and fixed bulkheads that the central portion would keep afloat even if both ends of the craft were shot away. The average speed of our battleships is from 12 to 14 knots, with a capacity for making as high as 18 knots under favorable conditions. The total cost of a first-class battleship, fully equipped, is from \$6,000,000 to \$7,000,000, but it is believed that this will be reduced hereafter by improved and more economical methods of construction.

batlle-shout, s. A shout raised in battle.

Weigwood considers Sp., &c., *batia* the original form, and derives it from Catalan *batia* = a bay, and *badar* = to open, to gape. (*Skeat.*)]

**A. As substantive:**

1. *Geog. & Ord. Lang.*: An arm or inlet of the sea extending into the land with a wider mouth proportionally than a gulf. Compare in this respect the Bay of Biscay with the Gulf of Venice.

"And as the ocean many bays will make."  
*Byron: Child Harold, iv. 157.*

2. *Hydraulics & Ord. Lang.*: A pond-head raised to keep a store of water for driving a mill.

3. *Arch. & Ord. Lang.*: A term used to signify the magnitude of a building. Thus, "if a barn consists of a floor and two heads, when they lay corn, they call it a barn of two bays. These bays are from fourteen to twenty feet long, and floors from ten to twelve broad, and usually twenty feet long, which is the breadth of the barn." (*Builder's Dict., Johnson, &c.*)

"All eruptions of air, though small and slight give sound, which we call crackling, puffing, spitting, &c., as in *bay salt* and lay leaves, cast into fire."

**bay-window, s.**

*Arch.*: A window projecting beyond the line of the front of a house, generally either in a semi-hexagon or semi-octagon. Strictly

BAY WINDOW.

speaking, a bay window rises from the ground or basement, while an *oriel* is supported on a corbel or brackets, and a *bow* window is always a segment of an arch; but in ordinary use these distinctions are seldom accurately observed, all three words being used as synonymous.

"... it hath bay windows transparent as barriadoes."  
*Shakspe.: Twelfth Night, iv. 2.*

1. A berry, and especially one from some species of the laurel. (See No. 2.)

2. The English name of the *Laurus nobilis*. A fine tree with deep-green foliage and a profusion of dark-purple or black berries. Both of these have a sweet, fragrant odour, and an aromatic, astringent taste. The leaves, the berries, and the oil made from the latter are narcotic and carminative. The leaves were anciently used to form wreaths or garlands

with which to encircle the brows of victors. The bay is common in Spain, Italy, Greece, and the Levant. [LAUREL.] It is common in English gardens, the leaves being often used

**bay-rum, s.** An aromatic, spirituous liquid, used by hair-dressers and perfumers, prepared in the West India by distilling rum in which bay leaves have been steeped. As imported it is almost colourless, and contains eighty six per cent. of proof-spirit. It is difficult to obtain genuine bay-rum, except directly from the importer, more than one-half of that consumed in Great Britain being an artificial mixture of oil of bay, alcohol, and water.

**bay-tree, bay tree, s.**

1. *Ord. Lang.*: The same as BAY (4), No. 2. It is sometimes called also the Sweet Bay-tree.

2. *Scripture.* The bay-tree of Ps. xxxvii. 35, Heb. עֲרַבְיָה (*arabiyah*), from עֲרַב (*arab*) = to spring up, may be the *Laurus nobilis*, though this is by no means certain. Gesenius makes it simply an indigenous tree, as distinguished from one transplanted. The Septuagint translators, mistaking עֲרַבְיָה (*arabiyah*) for עֲרַב (*arab*), called the tree "the cedar of Lebanon."  
"I have seen the wicked in great power, and spreading himself like a green bay-tree."—Ps. xxxvii. 35.

"The musketeer was generally provided with a weapon which had, during many years, been gradually coming into use, and which the English then called a dagger, but which, from the time of William III., has been known among us by the French name of bayonet."—*Maacaulay: Hist. Eng.*, ch. iii.

Zoology : A family of Arachnida (Spiders), of the order Arctaria. They have a rostrum and palpi of extreme length, have their bodies divided by a constriction, and live among damp moss.

bdēlī-ī-ūm (ō silent), s. [In Ger. and Fr. *bdellium*; Port. *bdellio*; Lat. *bdellium* and *bdellia*; Gr. βδέλλιον (bdellion). Apparently akin also to Heb. בְּדִילָה (bedholachh), from בָּדַל (bdāhāl) = to separate, to select.]

I. Scripture. The "bdellium" of Scripture is in Heb. בְּדִילָה (bedholachh) (see etym.), rendered in the Septuagint of Gen. ii. 12 ἀνθάραξ (antharax) (literally, burning coal) = . . . the carbuncle, ruby, and garnet (Liddell and Scott), the red sapphire (Dana); whilst in Numb. xi. 7 it is translated κρυστάλλος (krustallos) = . . . rock crystal. Some modern writers, following the Septuagint translation, make it a mineral, as are the "gold" and the "onyx stone" with which it is associated in Gen. ii. 12. Others think that it was the gum described under II. and III. 2; while the Rabbins, Bochart, and Gesenius consider that it was a pearl or pearl.

"And the gold of that land is good: there is *bdellium* and the onyx-stone."—Gen. ii. 12.

"And the manna was as coriander-seed, and the colour thereof as the colour of *bdellium*."—Numb. xi. 7.

II. Class. Nat. Hist. The *bdellium* of Pliny was once supposed to have been the gum of the Palmyra Palm, *Borassia tabelliformis*, but was more probably a Balsamodendron, apparently *B. Mukul* (III. 2).

III. Modern Botany, Old Pharmacy, and Commerce :

1. Indian *bdellium* or False Myrrh : A gum resin produced by *Balsamodendron Roxburghii* or *Amyris Bdellium*. It appears in light-coloured pellicles in the bark of the tree, which peel off from time to time; they diffuse for some distance round a fragrance of a delightful kind, but not equal to that of myrrh. It was formerly used in plasters.

2. The *bdellium* of the Persian Gulf : A gum resin derived from *Balsamodendron Mukul*.

3. African *bdellium* : Two gum resins, the one from *Balsamodendron Africanum*, which grows in Abyssinia and Western Africa; the other from a composite plant, *Ceradia furcata*. (Creas. of Bot.)

4. Sicilian *bdellium* : A gum resin produced by a species of carrot, *Daucus Hispanticus* (De Cand.), *D. gummiifer* (Lamarck), or by *D. glandium* (Linn.).

Surgery : A cupping-glass, to which are attached an exhausting syringe and a scarificator. It was introduced as a substitute for leeches, and shows the amount of blood drawn.

bē, \*bī, \*bēn (pr. par. *being*, \**beeing*, \**beying* (Eng.); \**beand* (O. Scotch) (pr. par. *been*, \**ben*, \**bē*), v.i. [A.S. *beon*, *beome* = to be, to exist, to become. It is thus declined: *ic beo* = I am; *thu beost*, *best*, *byst* = thou art; *he byth*, *biðh*, *we beoðh*, *beoð*, &c. Gael. *bi* = to be; Ger. *ich bin* = I am; O. H. Ger. *bin*, *bīn* = to be; Goth. *banan*; Slav. *byti*; Lith. *buti*; Sansc. *bhū* = to be. Compare also Lat. *fu* = I was; Gr. *φύω* (*phūō*) = to bring forth, to produce.] The substantive verb. It is used—

I. As a copula connecting the subject and its predicate: in which case it denotes existence in relation to that predicate; existence, the character of which is to be explained by the word with which the substantive verb is

connected; to be; to continue, to remain; to be present in a place; to happen in a particular way; to happen according to ordination or appointment; to become; to aim; with various other shades of meaning. Ranking as a copula or apposition verb, now technically viewed as one of incomplete predication (see Bain's *Higher Eng. Gram.*), it is followed by a nominative in apposition with it, and not with an objective as would be the case were it a transitive verb. Thus in the example from Acts xii. 15, given below, "It is his angel," the noun *angel* is in the nominative and not in the objective case.

¶ *Be* is defective, the omissions being supplied by parts from other verbs not in the least resembling it in sound, as *am*, *art*, *are* (from A.S. *eom* = to be), *were*, *was* (from A.S. *wesan* = to be). [BEARD, IS.]

1. In a general sense, in which case it may be joined with an adjective, an adverb, a substantive, a pronoun, &c.

"... I was envious at the foolish."—Ps. lxxlii. 2.  
"... lo, he is there."—Mark xiii. 21.  
"... it is his angel."—Acts xii. 15.  
"... Lord, is it I?"—Matt. xxvi. 22.

2. Specially: As an auxiliary verb, used

(a) Before a past (properly a perfect) participle, so as to constitute the passive voice.

"Blessed shall be thy basket and thy store."—Deut. xxviii. 5.

(b) Before the present (properly the imperfect) participle, so as to constitute a form of the active, implying that an action has commenced to be performed, that the doing of it is in progress, but is not yet completed.

"... the oxen were ploughing, and the asses feeding beside them."—Job i. 14.

II. In an abstract sense denoting simple existence. This is the reason why it is called the substantive verb. If the being existent be a living one, then the substantive verb denotes to live.

"To be or not to be, that is the question."—Shakesp. : Hamlet, iii. 1.

III. Special phrases :

1. \**Be als mekil* = forasmuch.

"All so is it ordeyed, be on assent of the brethren, *be als mekil* as the lyght forneside we may not meyntened in the tyme for to come."—English Gilds (For. Eng. Text Soc.), pp. 49, 50.

2. *Be it so* = let it be so. A phrase used (a) by one giving authority to do anything which he has the power to permit or refuse to have done, or (b) by one conceding what an opponent in argument has demanded.

"My gracious thanks,  
Be 't as she will not here, before your grace,  
Consent to marry with Demetrios."—Shakesp. : *Mide. Night's Dream*, ii. 1.

3. *Let be* = let alone, leave unmeddled with.

"Let be, said he, my peep."—Dryden.

¶ The following examples illustrate how interchangeably *be*, *bi*, and *ben* were once used:

(a) *Be*, used where *been* would now be employed.

"Fenyand one oblatiōne, as it had þe  
For prosper returninge haue in thare contrē."—Doug. : Virgil, 39, 10.

(b) *Ben* (= *beon*) for *be*.

"A manly man, to *ben* an abbot able."—Chaucer : C. T., Prol. 167.

*Be* was also used where *we* now employ *are*.

"Be they better than these kingdoms?"—A. Mos vi. 2.

It was also used in O. Scotch for *let* or *let be* = not to mention, not to speak of, to except. (Jamieson.)

¶ (a) Crabb thus distinguishes between the verbs *to be*, *to exist*, and *to subsist*:—"To be is applicable either to the accidents of things, or to the substances themselves; to *exist* only to substances or things that stand or *exist* of themselves. We say of qualities, of forms, of actions, of arrangement, of movement, and of every different relation, whether real, ideal, or qualificative, that they *are*; we say of matter, of spirit, of body, and of all substances, that they *exist*. Man is man, and will be man under all circumstances; he *exists* under every known climate, &c. Of *being* and *existence* as nouns, the former not only designates the abstract action of *being*, but is metaphorically employed for the sensible object that is; the latter is confined altogether to the abstract sense. Hence, human *beings*; *beings* animate and inanimate; the supreme *Being*; but the *existence* of a God, of innumerable worlds, of evil. *Being* may in some cases be indifferently employed for *existence*, particularly in the grave style; when speaking of animate objects, as the *being* of a God; our frail *being*; and when

qualified in a compound form is preferable, as our *well-being*. *Subsist* is properly a species of *existing*; it denotes temporary or partial *existence*. Every thing *exists* by the creative and preservative power of the Almighty; that which *subsists* depends for its *existence* upon the chances and changes of this mortal life. To *exist* therefore designates simply the event of *being* or *existing*; to *subsist* conveys the accessory ideas of the mode and duration of *existing*. Man *exists* while the vital or spiritual part of him remains; he *subsists* by what he obtains to support life."

(b) To *be*, to *become*, to *grow*, are thus discriminated:—"Be is positive; become is relative: a person is what he is without regard to what he was; he becomes that which he was not before. We judge of a man by what he is, but we cannot judge of him by what he will become. To become includes no idea of the mode or circumstance of its becoming; to grow is to become by a gradual process: a man may become a good man from a vicious one, in consequence of a sudden action on his mind; but he grows in wisdom and virtue by means of an increase in knowledge and experience." (Crabb : Eng. Synon.)

2. Of wood from trees, or anything similar: (1) A large, long piece of timber "squared," or rather made rectangular, on its several sides; specially one used to aid in supporting the ordinary rafters in a building. It is distinguished from a block by being longer than broad.

"A beam is the largest piece of wood in a building, which always lies cross the holding or the walls, serving to support the principal rafters of the roof, and into which the feet of the principal rafters are framed. No building has less than two beams, one at each head. Into these the girders of the garret floor are also framed; and if the building be of timber, the teazel-tensons of the posts are framed. The proportions of beams, in or near London, are fixed by Act of Parliament. A beam fifteen feet long must be seven inches on one side its square, and five on the other; if it be sixteen feet long, one side must be eight inches, the other six, and so proportionable to their length." — *Builder's Dictionary*.

A. As substantive:

1. Botany and Horticulture:

1. A well-known cultivated plant, *Vicia faba* of Linnæus, now called *Faba vulgaris*. It belongs to the order Leguminosæ. The stem is quadrangular and hollow; the leaves are alternate; they are pinnate with two to four leaflets. The flowers, which are fragrant, are papilionaceous, white, with violet-coloured veins and blotches looking almost black. The seeds are partly kidney-shaped. The native country of *Faba vulgaris* is believed to be the regions near the Caspian Sea, the Levant, and Egypt. The word *bean* occurs twice in Scripture (in 2 Sam. xvii. 28, and Ezek. iv. 9). The Hebrew term is *בִּישָׁת* (*bišat*), Septuagint Greek *κίναμος* (*kuamos*) (see etymology), and seems correctly translated. Pythagoras and his followers would not eat it, and the flamen Dialis, or priest of Jupiter at Rome, was forbidden to touch it. *Faba vulgaris* may be primarily divided into the Garden Bean and the Field Bean. Of the former there are numerous sub-varieties. The earliest is the Mazzagan, which is small-seeded; whilst the largest is the Windsor. The Field Bean runs into two leading sub-varieties, a larger and a smaller one; the latter is called Ticks. The horse-bean is the variety *equina*.

2. (Popularly.) Any leguminous plant resembling a bean, though not of the genuine genus *Faba*. (See *French* or *Hariot* bean, under No. 11.)

3. (Popularly.) Any plant with some vague resemblance to a bean in fruit, even though it be not even leguminous. Thus the Buck Bean, *Menyanthes trifoliata*, is properly of the Gentian order, and has no real affinity to *Faba*. [BUCK-BEAN.]

II. Commerce, &c.: The name given to the seeds of certain plants belonging to the natural order Leguminosæ. The Common Field Bean is the seed of the *Faba vulgaris*, the Broad or Windsor Bean, being a cultivated variety of the same plant. The French or Hariot Bean is the seed of *Phaseolus multiflorus*, and the Scarlet Runner (which is closely akin to the former) is *Phaseolus vulgaris*.

Beans are used for feeding horses, as also for fattening hogs. When fresh they also sometimes appear at table as a culinary vegetable; Magnified about 120 diameters. but dried beans are seldom used in this country as an article of food, partly owing to their strong flavour, and

GRANULES OF BEAN-STARCH.

partly to the difficulty with which they are digested. Scarlet-runners and French beans are used in the pod, in the green state, and eaten as a vegetable. Bean-meal, which is more easily digested than whole beans, contains twice as much nitrogenous matter as wheat-flour, and is more nutritious. It is sometimes used to adulterate flour and bread: this can be readily detected by the microscope. The cells of the bean are larger, and the cell-walls much thicker, than those of the wheat. The starch granules are also different, being oval or kidney-shaped, and having an irregular, deep cleft down the centre. Roasted beans were formerly used to adulterate coffee.

B. Attributively: Pertaining to the bean; consisting of plants allied to the bean.

The name may be held to imply that originally beans were really the chief dish on the table; but the term "bean-feast," which comes from the Northern counties, where the *bean-goose* is common, refers to that bird and not to the vegetable bean (see *Brewer's Phrase and Fable*). [BEAN-GOOSE, WAZZ-GOOSE.]

 "If he is willing to bear with their scrupulosity . . ."  
*Macaulay: Hist. Eng., ch. xl.*  
 ¶ (c) Crabst thus distinguishes between to bear and to yield:—"Bear conveys the idea of creating within itself; yield, that of giving from itself. Animals bear their young; inanimate objects yield their produce. An apple-tree bears apples; the earth yields fruits. Bear marks properly the natural power of bringing forth something of its own kind; yield is said of the result or quantum brought forth. Shrubs bear leaves, flowers, or berries, according to their natural properties; flowers yield seeds plentifully or otherwise as they are favoured by circumstances."

(b) To bear, to carry, to convey, and to transport are thus discriminated:—"To bear is simply to put the weight of any substance upon one's self; to carry is to remove it from the spot where it was: we always bear in

carrying, but not *vice versa*. That which cannot be easily borne must be burdensome to carry. Since bear is confined to personal service, it may be used in the sense of carry, when the latter implies the removal of anything by any other body. The bearer of a letter or parcel is he who carries it in his hand; the carrier of parcels is he who employs a conveyance. Convey and transport are species of carrying. Carry in its particular sense is employed either for personal exertions or actions performed by the help of other means. Convey and transport are employed for such actions as are performed not by immediate personal intervention or exertion: a porter carries goods on his knot; goods are conveyed in a wagon or cart; they are transported in a vessel. Convey expresses simply the mode of removing; transport annexes the ideas of place and distance. Merchants get conveyed into their warehouses goods which have been transported from distant countries." (Cobb: Eng. Synon.)

**bear** (2), *v.t.* [BEAR, *s.*, II. 1.]

On the Stock Exchange: A cant phrase meaning to attempt to depress the price of stock.

**bear** (1), \*bēare, \*bēre, \*bē-ōre, *s.* [A.S. *bera* = bear; Dut. *beer*; Ger. *bär*; M. H. Ger. *ber*; O. H. Ger. *bera*, *per*; Icel. & Sw. *björn*, *björn*; cogn. with Lat. *fera* = a wild beast.]

I. Ordinary Language:

I. Literally:

(1) *Zool.*: The English name of the various species of Plantigrade mammals belonging to the Ursus and some neighbouring genera. The term *plantigrade*, applied to the bears, intimates that they walk on the soles of their feet; not, like the digitigrade animals, on their toes. Though having six incisor teeth in each jaw, and large canines, like the rest of the Carnivora, yet the tubercular crowns of the molar teeth show that their food is partly vegetable. They grub up roots, and, when they can obtain it, greedily devour honey. They hibernates in winter. The best-known species is *Ursus arctos*, the Brown Bear, of which there are several varieties. The general length is about four feet, with a height of some thirty inches at the shoulder. The colour also varies considerably. The flesh is used for food, and the hams and paws are esteemed as delicacies; the fat is made into pomade, and the skin is dressed for robes. They are wild on the continent of Europe, in Asia, and in part of America; formerly they were found also in Britain. Other species are the Syrian Bear (*Ursus Syriacus*, which is the bear of Scripture); the American Black Bear (*U. Americanus*); the Grizzly Bear of the same continent (*U. ferax*); and the Polar Bear, *U.* or *Thalassarctos maritimus*, &c.

"... they be chafed in their minds, as a bear robbed of her whelps in the field."—1 Sam. xvii. 8

(2) *Paleontology*:

(i.) *The Family Ursidae*. The earliest representative of the Ursidae, or Bear family, known at present, does not belong to the typical genus *Ursus*. It is called *Amphicyon*, and is of Miocene age.

(ii.) *The Genus Ursus*. Of the True Bears belonging to the *Ursus* genus none have as yet been found earlier than the Pliocene.

(a) *Pliocene Bears*. The best known species is *Ursus arvernensis*.

(b) *Post-pliocene Bears*. One of these, *Ursus priscus*, seems the same as *U. ferax* (the Grizzly Bear). [A., I. 1.] Several bears, *Ursus spelæus*, *arctos*, and others, have been found in caves in England and elsewhere. Of these, *U. spelæus*, from Gr. σπηλαίος (*spelaios*) = a grotto, cave, cavern, or pit, is the one called specially the Cave-bear. It is a giant species, occurring in the later rather than the earlier Post-pliocene beds. (Nicolson: *Paleont.*, &c.)

2. *Figuratively*: A person brave, fierce, and rough in his treatment of others, whom one holds in his control.

"York. Call hither to the stake my two brave bears, That with the very shaking of their chains They may astonish these fell lurking curs: Bid Salisbury and Warwick come to me. (Enter the Earls of Warwick and Salisbury.) Olf, Are these thy bears? Will'it bait thy bears to death, And mangle the bear-ward in their chains. If thou dar'st bring them to the baiting-places." *Shakespeare*: 2 Hen. VI., v. 1.

II. Technically:

1. On the Stock Exchange: A cant phrase for one who contracts to sell on a specified day

certain stock not belonging to him, at the market price then prevailing, on receiving imaginary payment for them at the rate which obtains when the promise was made. It now becomes his interest that the stock on which he has speculated should fall in price; and he is tempted to effect this end by circulating adverse rumours regarding it; whilst the purchaser, called a "bull," sees it to his advantage to make the stock rise. The origin of the term is uncertain. Dr. Warton derives it from the proverbial expression of selling the skin before the bear is caught, but he does not assign any explanation to the contrary term *bull*; others point out that the action of the former is like that of a bear pulling down something with his paws, while that of the latter is suggestive of a bull tossing a person up with his horns. [BULL.]

2. *Astron.*: One or other of two constellations, *Ursa Major* and *Ursa Minor*, called respectively the Great Bear and the Little Bear. [URSA.] When the word *Bear* stands alone, it signifies *Ursa Major*.

They are sometimes ranked under the genus *Arbutus*. The flowers are rose-coloured, the berry of the *Uva ursi* is red, whilst that of the other is black. They afford food for moor-fowl. The former is used in nephritic and calculous cases, and sometimes even in pulmonary diseases; it moreover dyes an ash colour, and can be used in tanning leather. It is found on the Continent, especially in alpine regions, while its chosen habitat in the British Isles is in the Scottish Highlands.

**bear-bind**, *s.* The English name of the *Calyptegia*, a genus of plants belonging to the order Convolvulaceæ, or Bindweeds. It is called also Hooded Bindweed. The *Calyptegia sepium* and *C. soldanella* occur in Britain.

¶ (a) Crabb thus distinguishes between the verbs to beat, to strike, and to hit. To beat is to redouble blows; to strike is to give one single blow; but the bare touching in consequence of an effort constitutes hitting. We never beat but with design, nor hit without an aim, but we may strike by accident. It is the part of the strong to beat; of the most vehement to strike; of the most sure-sighted to hit.

(b) To beat, to defeat, to overpower, to rout, and to overthrow are thus discriminated:—"To beat is an indefinite term expressive of no particular degree: the being beaten may be attended with greater or less damage. To be defeated is a specific disadvantage; it is a failure in a particular object of more or less importance. To be overpowered is a positive loss; it is a loss of the power of acting which may be of longer or shorter duration. To be routed is a temporary disadvantage; a rout alters the course of proceeding, but does not disable. To be overthrown is the greatest of all mischiefs, and is applicable only to great armies and great concerns; an overthrow commonly decides a contest. Beat is a term which reflects more or less dishonour on the general or the army, or on both. Defeat is an indifferent term; the best generals may sometimes be defeated by circumstances which are above human control. Overpowering is coupled with no particular honour to the winner, nor disgrace to the loser; superior power is often the result of good fortunes than of skill: the bravest and finest troops may be overpowered in cases which exceed human power. A rout is always disgraceful, particularly to the army; it always arises from want of firmness. An overthrow is fatal rather than dishonourable; it excites pity rather than contempt." (Crabb: Eng. Synon.)

B. As subst.: One who, or that which, is beautiful. "Her *beautiful*, her own."

The beautiful: Abstract beauty; the notion of the assemblage of qualities that constitute beauty.

Crabb thus distinguishes between the words *beautiful*, *fine*, *handsome*, and *pretty*:—"Of these epithets, which denote what is pleasing to the eye, *beautiful* conveys the strongest meaning; it marks the possession of that in its fullest extent, of which the other terms denote the possession in part only. *Fineness*, *handsomeness*, and *prettiness* are to beauty as parts to a whole. When taken in relation to persons, a woman is *beautiful* who in feature and complexion possesses a grand assemblage of graces; a woman is *fine* who with a striking figure unites shape and symmetry; a woman is *handsome* who has good features, and *pretty* if with symmetry of feature be united delicacy. The *beautiful* comprehends regularity, proportion, and a due distribution of colour, and every particular which can engage the attention; the *fine* must be coupled with grandeur, majesty, and strength of figure; it is incompatible with that which is small; a little woman can never be *fine*. The *handsome* is a general assemblage of what is agreeable; it is marked by no particular characteristic but

böll, böy; pöüt, jöwyl; cat, çell, chorus, çhin, beçh; go, gem; thin, thin; sin, aç; expect, Xenophon, exist. ph = f -cian = çhan. -cion, -tion, -sion = çhün; -tion, -çion = çhün. -tious, -çious, -çious = çhüs. -ble, -dle, &c. = bël, dël.

the absence of all deformity. *Prettiness* is always coupled with simplicity; it is incompatible with what is large; a tall woman with masculine features cannot be *pretty*. *Beauty* is peculiarly a female perfection; in the male sex it is rather a defect; but though a male may not be *beautiful* or *pretty*, he may be *fine* or *handsome*. When relating to other objects, *beautiful, fine, pretty*, have a strong analogy; but *handsome* differs too essentially from the rest to admit of comparison. With respect to the objects of nature, the *beautiful* is displayed in the works of creation, and wherever it appears it is marked by elegance, variety, harmony, proportion, but above all, that softness which is peculiar to female *beauty*; the *fine*, on the contrary, is associated with the grand, and the *pretty* with the simple. The sky presents either a *beautiful* aspect, or a *fine* aspect; but not a *pretty* aspect. A rural scene is *beautiful* when it unites richness and diversity of natural objects with superior cultivation; it is *fine* when it presents the bolder and more impressive features of nature, consisting of rocks and mountains; it is *pretty* when, divested of all that is extraordinary, it presents a smiling view of nature in the gay attire of shrubs and many coloured flowers and verdant meadows and luxuriant fields. *Beautiful* sentiments have much in them to interest the affections, as well as the understanding; they make a vivid impression. *Fine* sentiments mark an elevated mind and a loftiness of conception; they occupy the understanding, and afford scope for reflection; they make a strong impression. *Pretty* ideas are but pleasing associations or combinations that only amuse for the time being, without producing any lasting impression. We may speak of a *beautiful* poem, although not a *beautiful* tragedy; but a *fine* tragedy, and a *pretty* comedy. Imagery may be *beautiful* and *fine*, but seldom *pretty*. (Crabb: Eng. Synonyms.)

**beau-ty, \* beau-tée, \* beauté, s.** [Fr. *beauté*; O. Fr. *beauté*; from *beau* or *bel* (m.), *belle* (f.) = beautiful. In Sp. & Port. *belleza* = beauty; *bello* = beautiful; Ital. *bella* = beauty; *bello* = beautiful; Lat. *bellitas* = beauty; *bellus* = goodly, handsome; contracted from *bonus*, dimin. of *bonus*, another form of *bonus* = good.]

**I. In the abstract:** That quality or assemblage of qualities in an object which gives the eye or the ear intense pleasure; or that characteristic in an object or in an abstraction which gratifies the intellect or the moral feeling.

**1.** The assemblage of qualities in a person or thing which greatly pleases the eye.

(1) *In a person:*  
(a) Manly beauty.

"This must be of a kind to suggest that the individual possessing it is endowed with the higher qualities of manhood—intellect, courage, strength of will, and capacity for

ruling other men. Rosy cheeks and faultless symmetry of feature do not constitute manly beauty if they are of a kind to suggest that the person possessing them is effeminate in character.

"But to all Israel there was none to be so much praised as Absalom for his beauty: from the sole of his foot even to the crown of his head there was an blemish in him.—2 Sam. xiv. 26.

(b) *Womanly beauty.*

"This must indicate that the person possessing it belongs to a high type of woman, with no commingling of masculine characteristics. In this case the excellences to be looked for are faultless symmetry of form and of feature and complexion, varying in hue as the mind is affected by internal emotion, but with an expression of purity, gentleness, sensibility, refinement, and intelligence.

"But if that thou wilt prayen my beauty."  
Chaucer: C. T., 4, 676.

"This was not the beauty—Oh, nothing like this. That to young Nourmahal gave such magic of bliss; But that forlornness, ever in motion, which plays Like the light upon autumn's soft shadowy days.

"Now here and now there, giving warmth as it flies From the lips to the cheek, from the cheek to the eye; Now melting in mist, and now breaking in gleams Like the glimpses a sunset has of heaven in his dreams."  
Moore: L. R.; Light of the Haram.

(c) Similarly, boyish beauty must suggest that the person possessing it is of the highest type of boyhood, girlish beauty of girlhood, and childish beauty of childhood. To approach perfection each type must be itself and no other.

(2) *In one of the inferior animals:* This consists of colour, symmetry, form, grace, and everything else that shows the adaptation of the structure of the animal to the purposes of its being.

"... yet both must fall in conveying to the mind an adequate idea of their surpassing beauty [that of the Trochilidae, or Humming Birds]. The rainbow colours of the most resplendent genus are here superadded to a living form, which to itself is exquisitely graceful and animated in all its movements; the effect of these piny birds is so rapid as to elude the eye..."  
Swainson: Birds, II. 147.

(3) *In a place or thing:* This consists of colour, symmetry, and adaptation to the end for which it was erected or made.

"The uncertain glory of an April day,  
Which now shows all the beauty of the sun,  
And by and by a cloud takes all away."  
Shakspeare: Two Gent. of Verona, I. 2.

**2.** The assemblage of qualities in an object which are fitted to inspire analogous though not identical pleasure to the ear.

"Recognising the simple æsthetic pleasure derivable from rhythm and euphony... the feelings of beauty yielded by poetry are feelings remotely represented."  
Herbert Spencer: Psychol., p. 642.

**3.** That characteristic in an object or in an abstract conception which gratifies the intellect.

"With incredible pains have I endeavoured to copy the several beauties of the ancient and modern historians."  
Arbutnot: Hist.

**4.** That characteristic in an object, in an action, or in an abstract conception which gratifies the moral feeling. This is generally called moral beauty.

"He hath a dally beauty in his life  
That makes me ugly."  
Shakspeare: Othello, v. 1.

**II. In the concrete:** A person or thing fitted to inspire the delight referred to under No. 1.

**1.** A person or persons fitted to do so. *Specialty—*

(a) A beautiful woman, individually.  
"Patroclus now th' unwilling beauty brought."  
Pope: Homer's Iliad, bk. I., 450.

(b) The same, taken collectively.  
"And Belgium's capital had gathered then  
Her beauty and her Chivalry, and bright  
The lamps shone o'er fair women and brave men."  
Byron: Child Harold, III. 21.

**2.** A thing or things attractive to the eye, to the ear, or to the love of order, symmetry, and grace existing in the mind.

"The beauties of that country are indeed too often hidden in the mist and rain..."  
Macaulay: Hist. Eng., ch. xii.

**beauty-beaming, a.** Beaming with beauty.

**A. As substantives:**

**1.** The English name of the well-known rodent mammal *Castor fiber*, or, more loosely, of any species belonging to the genus *Castor*. [CASTOR.] The animal so designated has in each jaw two powerful incisor teeth, coated with hard enamel, by means of which it is enabled to cut across the trunks of the trees which it requires for its engineering schemes. [BEAVER-DAM.] The hind feet are webbed, and one of the five toes has a double nail. The tail is flattened horizontally, and covered with scales. Large glandular pouches secrete an odoriferous substance called *Castoreum*, much prized by the ancients, who regarded it as of high medical value. [CASTOREUM.] The *Castor fiber* exists through the temperate and colder parts of North America. A species generally believed to be the same one (though this has been doubted) exists in Europe on the various European rivers, such as the Rhine, the Danube, and the Weser, and has attracted admiring notice since the days of Herodotus. It formerly existed in historic times in Britain. *Beverley* in Yorkshire (in Anglo-Saxon *Befor-leag* or *Before lagu* = *Beaver place* (*Bosworth*), or *Beafarlat* = *Beaver's lae*, or *Beverlac* = *Beaver's lake*) has still a beaver on its coat of arms, the tradition being that the animal inhabited the river Hull in the vicinity. In Wales it existed as late as A.D. 1188, on the Teify. In Scotland it was found to or beyond the fifteenth century on Loch Ness.

"For an excellent account of the living beaver see *The American Beaver and his Works*, by Lewis H. Morgan, Philadelphia, 1865, 8vo.

Remains of the common beaver have been met with in England in post-tertiary peat-beds in Cambridgeshire and Essex. In 1870, when excavations were being made for the East London Waterworks Company's new reservoirs, a little north of the Lea, between the stations of Clapton and St. James's Street, Walthamstow, on the Chingford Branch of the Great Eastern Railway, abundant remains of the beaver were discovered, whilst the accumulations of fallen timber favoured the conclusion drawn by Dr. H. Woodward that formerly ancient beaver-dams existed on the Lea, then (as now in America) causing floods, which inundated and destroyed much of the forest. (See Brit. Assoc. Rep. for 1869, II. 104.) An allied but much larger species, *Trogatherium Cuvieri* (Owen), has been found fossil in the Norfolk Forest bed, and another in North America, the *Castoroides Ohioensis* (Foster).

**2.** The fur of the animal just described.  
**3.** A hat made of such fur or hair.

**beaver-house, s.** A "house" built by a beaver. It is made of wood, mud, and stones. When a beaver finds that its openly inhabiting such an edifice in the vicinity of a human settlement exposes it to unnecessary risk, it abandons it, burrows in a hole which it has dug, and is in consequence called a "terrier," in the broad sense of an earth animal or burrowing animal. Whilst the beavers inhabiting "houses" are social, the terriers are solitary.

¶ (a) Crabb thus distinguishes the terms becoming, decent, fit, and suitable:—"What is becoming respects the manner of being in society, such as it ought, as to person, time, and place. Decency regards the manner of displaying one's self, so as to be approved and respected. Fitness and suitability relate to the disposition, arrangement, and order of either being or doing, according to persons, things, or circumstances. The becoming consists of an exterior that is pleasing to the view; decency involves moral propriety; it is regulated by the fixed rules of good breeding; fitness is regulated by local circumstances, and suitability by the established customs and usages of society. The dress of a woman is becoming that renders her person more agreeable to the eye; it is decent if it no wise offend modesty; it is fit if it be what the occasion requires; it is suitable if it be according to the rank and character of the wearer. What is becoming varies for every individual; the age, the complexion, the stature, and the habits of the person must be consulted in order to obtain the appearance which is becoming; what becomes a young female, or one of fair complexion, may not become one who is farther advanced in life, or who has dark features. Decency is one and the same for all; all civilized nations have drawn the exact line between the decent and indecent, although fashion may sometimes draw females aside from this line. Fitness varies with the seasons, or the circumstances of persons; what is fit for the winter is unfit for the summer, or what is fit for dry weather is unfit for the wet; what is fit for town is not fit for the country; what is fit for a healthy person is not fit for one that is infirm. Suitableness accommodates itself to the external circumstances and conditions of persons; the house, the furniture, the equipage of a prince, must be suitable to his rank; the retinue of an ambassador must be suitable to the character which he has to maintain, and to the wealth, dignity, and importance of the nation whose monarch he represents."

(b) Becoming, comely, and graceful are thus discriminated.—These epithets "are employed to mark in general what is agreeable to the eye. Becoming denotes less than comely, and this less than graceful: nothing can be comely or graceful which is unbecoming; although many things are becoming which are neither comely nor graceful. Becoming respects the decorations of the person, and the exterior deportment; comely respects natural embellishments; graceful natural or artificial accomplishments: manner is becoming: figure is comely; air, figure, or attitude is graceful. Becoming is relative; it depends on taste and opinion, on accordance with the prevailing sentiments or particular circumstances of society. Comely and graceful are absolute; they are qualities felt and acknowledged by all." (Crabb: Eng. Synon.)

The Priory of St. Mary Bethlehem, like the other English monastic establishments, was dissolved at the Reformation, Henry VIII., in 1547, granting its revenues to the Mayor, the commonalty, and the citizens of London. They made it a hospital for lunatics. In 1676 the original buildings were superseded by those of the "New Hospital of Bethlehem," erected near London Wall, the original one being thenceforward known as "Old Bethlehem." Finally, in 1815, the hospital was transferred to Lambeth.

I. Literally:

1. *Spec.*: The well-known insect half domesticated for honey-making in hives. It is the *Apis mellifica*, Linn., and is still found wild or escaped from man's control in Russia, in portions of Asia, in Italy, and in France. Bees are social insects. Their societies consist of three classes—neuters, females, and males. The first-named are abortive females, and do all the work of the society; they are armed with a sting, and their larvæ, if treated with specially rich food,

BEEES.  
a. Drone. b. Queen. c. Worker.

can develop into perfect females. The solitary female in the hive is popularly called a queen; she is fecundated in the air, and then deposits her eggs in hexagonal combs which the workers have prepared for the purpose. The eggs are hatched into maggot-like larvæ, which are fed on a mixture of wax and honey, are then shut by the workers into the cell, which they enclose with a lining, and finally emerge as perfect insects. A single female will produce in a year from 12,000 to 20,000 bees, of which all but about 3,000 die at the approach of winter. The males are called drones. A well-peopled hive will contain from 200 to 800 of them. Being destitute of a sting, they have not the power of defending themselves, and after their appropriate function has been performed, they are remorselessly put to death by the workers. When bees become too numerous in a hive, a fresh queen is nurtured, under whose auspices they swarm.

" And bees in hives as idly wait  
The call of early Spring." *Keats*.

*Cooper*: *To the Sea*. Mr. Newton.

2. *Gen.*: Any insect of a similar structure to the hive-bee, as the Humble Bee, the Carpenter Bee, the Mason Bee, solitary bees in general. In the same sense the plural *bees* is the technical English name for the section of the Hymenopterous order Anthophila (q. v.).

II. Figuratively:

1. A busy person. (*Colloquial*.)

2. An assemblage of persons for a specific purpose, as to unite their efforts for a charitable object, or to carry on a contest with each other in spelling, some similar intellectual or other exercise.

*Spelling Bees* crossed the Atlantic, and became for a time quite the rage in Britain during the latter part of 1875 and in 1876. After a time, however, their popularity ceased. During the latter part of their sojourn in that country, *Definition Bees* were attempted as a relief to the monotony of perpetual spelling.

**bee-bread**, *s.*

A kind of "bread," composed of the pollen of flowers collected by bees, and which after it has been converted by them into a whitish jelly by being received into their stomachs, and thence perhaps mixed with honey, is finally used for the feeding of their larvæ. (See Kirby & Spence's *Introduct. to Entomology*, (Letter 11th).)

It has two long tail-feathers projecting behind the rest. Its general colour above is brownish-red; the forehead is pale blue; a black band crosses the throat, meeting a streak of the same colour along the side of the head, the space thus enclosed being yellow; the lower parts, wings, and tail are green.

2. *Plur.* (*Bee-eaters*): The English name of the family of Meropidae, of which the genus *Merops* is the type. Residents in India have at times the opportunity of seeing a beautiful green species, *Merops indicus*, darting out from among trees, and returning again, much as the fly-catchers do.

They have a certain resemblance, which, however, is one of analogy and not of affinity, to bees. The *Broad-bordered Bee Hawk-moth* is *Macroglossa fuciformis*, and *Narrow-bordered Bee Hawk-moth* is *Macroglossa bombyliiformis*.

**bee-parasites**, *s. pl.* A name sometimes given to the order of insects called Strepsiptera, which are parasitic on bees and wasps. (*Dallas*, *Nat. Hist.*, (Index).)

"When I got home to my lodging I was just like a demented man; my head was buzzing like a *bee-scap*, and I could hear [of] nothing but the brar of that fearful woman's tongue."—*Steam-Beat*, p. 53. (*Jamieson*.)

**bee-wax**, *s.* The wax formed by bees. It is not, as some suppose, the farina collected from flowers, but exudes from between the segments on the under-side of the bodies of the bees, eight scales of it emanating from each.

A tree, the *Fagus sylvatica*, or the genus *Fagus* to which it belongs. It is ranked under the order Corylaceæ (Mastworts). The nuts are triquetrous, and are placed in pairs within the enlarged prickly involucre. They are called *mast*, and are devoured in autumn by swine and deer. The wood is brittle and not very lasting, yet it is used by turners, joiners, and millwrights. The fine thin bark is employed for making baskets and band-boxes. The country people in some parts of France put the leaves under mattresses instead of straw, their elasticity rendering them well adapted for such a purpose.

Compare in Sw. *bifin*, *bifstek*, and Dut. *blefn*, *biefstuk* = Eng. *beef-steak*. A word introduced by the Normans. Trench directs attention to the fact that while in English the domestic animals, as long as they are living, are called by Saxon names, their flesh, after they are dead, has, as a rule, some Norman appellation, as if the Saxons had tended them while living, and the Normans eaten them when dead. "Thus," he says, "ox, steer, cow, are Saxon, but *beef* Norman; *sheep* is Saxon, but *mutton* Norman. So it is severally with *swine* and *pork*, *deer* and *venison*, *foot* and *pullet*, *Bacon*, the only flesh which perhaps ever came within his (the Saxon's) reach, is the single exception." (*Trench: The Study of Words*.) (See also *Scott's Ivanhoe*.)

**A. As substantive:**

1. An ox, a cow, or a bull, regarded as fit for food.

¶ In this sense it has a plural beech.

"Alcimus slew twelve sheep, eight white-tooth'd swine, Two crook-haunched beech." *Chapman*.

2. The flesh of the ox or the cow, used either fresh or salted. It is the most nutritious of all kinds of meat, and is well adapted to the most delicate constitutions. It should be well cooked, as it has been proved that underdone beef frequently produces tapeworm. Good beef is known by its having a clear uniform fat, a firm texture, a fine open grain, and a rich reddish colour. Meat which feels damp and clammy should be avoided, as it is generally unwholesome. Fresh beef loses in boiling 30 per cent. of its weight; in roasting it loses about 20 per cent. The amount of nitrogenous matter found to be present in one pound of good beef is about four ounces. In the raw state it contains 50 per cent. of water. (Ox.)

"The fat of roasted beef falling on birds will baste them." *Swaft*.

**B. As adjective:** Consisting of the flesh of the ox, cow, or even the bull.

**A. As substantive:** A fermented aqueous infusion of malt and hops, or of malt, sugar, and hops. The term is now applied to all malt liquors prepared by the process of brewing.

Beers are divided into two great classes, ales and porters, the former being chiefly prepared from pale malt, and having a pale amber colour, whilst in the preparation of the latter a certain proportion of roasted or black malt is used along with the pale malt. This increases the colour, and gives to the porter a somewhat bitter flavour. These two classes are subdivided into a great many varieties, depending on the strength of the wort used and the amount of hops added. Thus we have pale ale, mild ale, bitter ale, barley wine, table beer, &c. Stout, brown stout, double brown stout, &c., are merely richer and stronger kinds of porter.

Genuine beer should consist of water, malt extract (dextrine and glucose), hop extract, and alcohol. The quantity of alcohol in beer varies from two per cent. in table beer to ten or even twelve per cent. in strong ale, and the extract from three to fifteen per cent., the latter giving to the beer its nutritive value. The alcohol present always bears a relation to the amount of sugar fermented. A good sound beer should be perfectly transparent, and have a brilliant colour and a pleasant flavour. Sour beers and beers that are thick are very unwholesome.

Legislative acts have been passed imposing severe penalties on any brewer or publican who shall have in his possession, or who shall sell adulterated beer, and a further heavy penalty on any druggist or other person who shall sell any adulterant to a licensed brewer. Notwithstanding the stringency of these acts, beer has been, and still is, very largely adulterated. The adulterants used at the present time are, however, of a somewhat harmless character. The publican purchases from the brewer a cask of genuine beer. To this he adds, for the sake of profit, a large proportion of water. The beer being now reduced in colour and flavour, must be "doctored." Molasses, foot-sugar, liquorice, or caramel is added to increase the colour; grains of paradise, cayenne, and in some cases even tobacco, to give pungency; and mustard, coppers, salt, and alum to impart a frothy head to the beer. The nitrogenous matter extracted from the malt, and present in the original beer, is thus reduced to a minimum, and the beer-drinker pays for a liquor which may be sweet and pleasant to the taste, but is almost destitute of nourishment. Salt is added, not so much (as some publicans say) to preserve the beer, as to increase the thirst, and thereby impart a craving for more drink. *Cocculus indicus*, picric acid, strychnine, and opium, said to be adulterants, are now seldom, if ever, used to adulterate beer.

"Flow, welsted! flow, like thine inspirer, *beer!* The state, not ripe; the thin, yet ever clear; So sweetly mawkish, and so smoothly dull; Heady, not strong; and foaming, tho' not full." *Pope: Dunciad*, bk. III., 189-192.

Several attempts have been made to establish beetroot distilleries in that country, but the great difficulty has been to obtain a clean spirit, the flavour of the beet being very persistent. Beetroot contains ten per cent. of sugar, and about two per cent. of nitrogenous matters. It was formerly used to adulterate coffee.

"The beetroot is first washed in a rotatory drum immersed in water, then rasped into pulp, and squeezed in woollen sacks by hydraulic pressure, or in continuous revolving presses, or the sugar is removed by diffusion in iron tumblers. Dr. Murray admits that this has much to recommend it, though the phonetic connection between the Old Eng. *beggen* and the still older form *bedecian* is, in his opinion, by no means established. He thinks that "the most likely derivation is from O. Fr. *begart* = *beheld*."] [BEGHARDS.]

A. Intransitive: To ask for alms, *spec.*, to ask habitually; to be a professional beggar, to be a mendicant.

"And that a great man Did mean to beg you for—his daughter."—City Match (G. P.), 514. (Vares.)

¶ (a) Crabth thus distinguishes between the verbs to beg and to desire:—"To beg marks the wish; to desire, the will and determination. *Beg* is the act of an inferior; *desire* of a superior. We beg a thing as a favour, we desire it as a right."

(b) To beg, beseech, solicit, entreat, supplicate, implore, crave are thus discriminated:—The first four of these do not mark such a state of dependence in the agent as the last three: to beg denotes a state of want; to beseech, entreat, and solicit a state of urgent necessity; supplicate and implore, a state of subject distress; crave, the lowest state of physical want. One begs with importunity; beseeches with earnestness; entreats by the force of reasoning and strong representation. One solicits by virtue of one's interest; supplicates by a humble address; implores by every mark of dejection and humiliation. *Begging* is the act of the poor when they need assistance; *beseeching* and *entreating* are resorted to by friends and equals, when they want to influence or persuade; *beseeching* is more urgent, *entreating* more argumentative. *Solicitations* are used to obtain favours which have more respect to the circumstances than the rank of the solicitor; *supplicating* and *imploping* are resorted to by sufferers for the relief of their misery, and are addressed to those who have the power of averting or increasing the calamity. *Craving* is the consequence of longing; it marks an earnestness of supplication, an abject state of suffering dependence.

A. Ordinary Language:

I. Literally:

1. One whose habitual practice is to implore people for alms, whether because he has some physical or mental defect which wholly or partially incapacitates him from working; or because (if such a thing be conceivable) all his efforts to obtain work have been uniformly abortive; or finally, in too many cases, because he is too idle to work and too shameless to blush at the meanness of casting his support on others perhaps less strong in body, and even less rich in purse, than himself.

"Bet than a lezer, or a beggere." Chaucer: C. T., 242.

"And there was a certain beggar named LAZARUS, which was laid at his gate full of sores, and desiring to be fed with the crumbs which fell from the rich man's table. . . ."—Luke xvi, 20, 21.

2. One who is dependent on others for support, whatever his position in society.

3. One who asks a favour, however legitimate; a petitioner for anything.

"These shameful beggars of principles, who give this precarious account of the original of things, assume to themselves to be men of reason."—Pilloton.

B. Old Law and Ord. Lang. Sturdy beggar: An able-bodied man quite capable, if he liked, of working, but who will not do it because he prefers to quarter himself upon the indolent. The Act 14 Eliz., c. 5, passed in 1572, defined rogues, vagabonds, and sturdy beggars to be "all persons whole and mighty in body, able to labour, not having land or mister, nor using any lawful merchandise, craft, or mystery." These, and coupled with them, unhappily, "all common labourers able in body, loitering and refusing to work for such reasonable wage as is commonly given"—that is, what now would be called all agricultural or other labourers on strike—were, for the first offence, to be grievously whipped and be burned through the gristle of the right ear with a hot iron an inch round; for the second should be deemed felons; and for the third suffer death, without benefit of clergy. The cruel severity of the Act made it fall of effect. The sturdy beggar continued to flourish; he does so still. He may be seen daily almost anywhere, alike in Europe and the United States; and as long as the thoughtless continue to give him alms in the street, there is no likelihood of his condescending to work.

¶ To begin with: To commence with; to select any particular person or thing as the first of a series.

"A lesson which requires so much time to learn, had need be early begun with."—Govern. of the Tongue.

¶ Crabb thus distinguishes the verbs to begin, to commence, and to enter upon:—"Begin and commence are so strictly allied in signification, that it is not easy to discover the difference in their application, although a minute difference does exist. To begin respects the order of time; to commence, the exertion of setting about a thing. *Begin* is opposed to end; *commence*, to complete: a person begins a thing with a view to ending it; he commences with the view of completing it. To begin is either transitive or intransitive; to commence is mostly transitive: a speaker begins by apologising; he commences his speech with an apology. To begin is used either for things or persons; to commence, for persons only: all things have their beginning; in order to effect anything we must make a commencement. *Begin* is more colloquial than *commence*: thus we say, to begin the work, to commence operations. To commence and enter upon are as closely allied in sense as the former words; they differ principally in application: to commence seems rathly to denote the making an experiment; to enter upon, that of first doing what has not been tried before: we commence an undertaking; we enter upon an employment." (Crabb: Eng. Synon.)

Accadian, Assyrian, & Babylonian Myth: A "god" mentioned in Scripture, in Isa. xlvi. 1; Jer. l. 2; II. 44; in the Septuagint, in Baruch vi. 40, and in the apocryphal additions to the Book of Daniel (BEL AND THE DRAGON), as well as by classical authors. Much new light has recently been thrown on Bel's characteristics and position in the heavenly hierarchy, by the examination of the cuneiform tablets and sculptures. It has been discovered that, prior to 1600 B.C., the highly interesting Turanian people called Accadians, the inventors of the cuneiform writing, who wielded extensive authority in Western Asia before the Semitic Assyrians and Babylonians had come into notice, worshipped as their first triad of gods Anu, ruling over the heaven; Elu, Belu, or Bel, over the earth; and Ea over the sea. Bel's three children, or three of his children, were Shamas, the Sun-god; Sin, the Moon-god; and Ishtar, the Accadian Venus. Sayce shows that some first-born children were vicariously offered in sacrifice by fire to the Sun-god. From the Accadians human sacrifice passed to various Semitic tribes and nations. Bel's name Elu identifies him with the Phenician El, who, in a time of trouble, offered his first-born son, "the beloved," on a high place, by fire. It is not settled whether or not Bel was the same also as the Phenician Baal. To the wrath of Bel the deluge was attributed. In Scripture times he was known exclusively as a Babylonian divinity, being distinguished from both Nebo and Merodach. In the later Babylonian empire, however, Merodach came to be generally identified with Bel, though sometimes distinguished from him, being called "the lesser Bel." (Sayce, Bosawen, Fox Talbot, Bosanquet, &c., in Trans. Bib. Archaeol. Soc., vols. I.-vi.)

¶ Bel enters as an element into various Babylonian names, as Belteshazzar = the Prince of Bel (Dan. I. 7; iv. 3, 8, 19).

Bel and the Dragon, s. One of the books of the Apocrypha, or, more precisely, certain apocryphal chapters added to the canonical Book of Daniel. The Jews consider them as no part of their Scriptures. They were penned probably by an Alexandrian Jew, the language used being not Hebrew, nor Aramean, but Greek. The Church of Rome accepts Bel and the Dragon as part of the Holy Scripture; most, if not all, Protestant churches reject it. In Roman Catholic worship it is read on Ash Wednesday, and was so in the old lectionary of the English Church on the 23rd of November. The new lectionary has it not either on that or any other date. The story of Bel and the Dragon tells how Daniel enlightened Cyrus, who is represented as having been a

devout worshipper of Bel, by proving that the immense supplies of food laid before the idol were really consumed, not by it or by the inhabiting divinity, but by the priests and their families. On Cyrus urging that the dragon, also worshipped, was at least a living God, Daniel poisoned it, for which he was thrown into a lions' den, where the prophet Habakkuk fed him. Ultimately he was released, and his persecutors put to death.

¶ The above narrative must not be confounded with one called also "Bel and the Dragon," translated by Mr. Fox Talbot from the cuneiform tablets.

Mr. Talbot believes that the dragon, seven-headed like the one in Revelation, would, if the tablets were complete, prove the same being that seduced some of the heavenly "gods," or angels, from their allegiance (Rev. xii. 4; Jude 6, for which he was slain by Bel. The resemblance is not to the apocryphal book now under consideration, but to the combat between Michael and the Dragon in Rev. xii. 7-17. (H. Fox Talbot in Trans. Bib. Archaeol. Soc., vol. iv., 1875, p. 349.)

Paleont. (Of the form Belemnites, rendered in English Belemnite.) A genus of fossil chambered shells, the typical one of the family Belemnitidae. The slow progress of the human mind towards scientific truth, and the circuitous route which the limitation of its powers compel it to take in reaching that goal, are beautifully exemplified by the successive hypotheses broached as to the nature of the belemnite. The first was that it was a product of the mammal called by the Romans lynx, and by the Greeks λυγξ (lungkx), probably the Caracal (Felis caracal). It was therefore called Lapis lynceus, and lyncourion or lyncurium, λυγκοῦριον (lungkourion), though some think that by these

words were meant reddish amber, or the mineral tourmaline or the hyacinth, the Scriptural jacinth. The puzzling fossils figured next as Idæi, dactyliti, that is, "fingers from Mount Ida," freely translated or transformed in the Middle Ages into "Devil's fingers." Then electricity was called in to account for them, and they were named Thunderstones (Lapides fulminantes) and Ficks, or less hypothetically, "Arrow Stones." At a more advanced period they were looked upon as stalactites, or as crystals which never had pertained to living beings. At length the true view struggled into existence that they were organic remains. Held by Von Treussau, Klein, Breynius, Da Costa, Brander, and Plott to be shells, and the proper position of which they could not determine. Cuvier and Lamarck made a great step forward in ranking them as cephalopods with an internal shell, a conclusion confirmed by Buckland, Owen, and others. The last-named paleontologist placed the belemnite in the Di-branchiate order of Cephalopoda.

One essential part of the shell is the BELEMNITE RESTORED. phragmocone [see a. Ink bag, b. Pro-ostacrum, BELEMNITE, c. Phragmocone, d. Guard, e. Tectacle, f. Arms.

chambered cone, that is, a portion conical in form and divided transversely by septa or partitions, like a pile of watch-glasses, into shallow chambers, connected with each other by a siphuncle or small pipe or siphon near the margin of the cone. The entire cone is enveloped in a sheath, which rises above the chambers and gives support to the soft body of the animal (called the pro-ostacrum), and this again in a conical cavity or alveolus excavated in the base of a long tapering body resembling the head of a javelin, and called the guard. It is from this fact that the name Belemnite has arisen. Dr. Buckland and Agassiz discovered in specimens from Lyme Regis, collected by Miss Anning, a fossil ink-bag and duct. There have been found also traces of the contour of the large sessile eyes, the funnel, a great proportion of the muscular parts of the mantle, the remains of two lateral fins, eight cephalic arms, each apparently provided with twelve to twenty pairs of slender elongated horny hooks. Owen considers that the belemnite combined characters at present divided among the three cephalopoda genera Sepia, Onychoteuthis, and Sepiola.

These animals seem to have been gregarious, living in shallow water with a muddy bottom rather than one studded with projecting corals. Owen thinks that they preserved a tolerably vertical position when swimming, at times rising swiftly and stealthily towards the surface infixing their claws in the abdomen of a serpentine fish, and dragging it down to the depths to be devoured. Belemnites are found all over Europe, and also in India. The known species are estimated at more than 100, ranging from the Lias to the Chalk.

Paleont. A family of molluscs belonging to the class Cephalopoda, the order Di-branchiata, and the section Decapoda. The shell consists of a "pen" terminating posteriorly in a chambered cone, technically called a phragmocone, from φραγματός (phragmos) = a hedge, fence, psling, fortification, or enclosure, and κώνος (kōnos) = the mathematical figure termed a cone. The phragmocone is sometimes invested with a fibrous guard, and it has air-cells connected by a siphuncle piercing the several chambers close to the ventral side. Dr. S. O. Woodward arranges the Belemnitidae in the

I. The mental act or operation of accepting as true any real or alleged fact or opinion on the evidence of testimony, or any proposition on the proof afforded by reasoning. It is opposed to the conviction produced by personal observation or experience, which is stronger than that resting on testimony or reasoning. The term *believe* may be used for full and unwavering acceptance of anything as true, for an acceptance weak and fluctuating, or for anything intermediate between the two.

† II. The state of being accepted as true on the evidence of reasoning or testimony.

III. That which is accepted as true on the evidence of testimony or reasoning.

I. Gen.: In the foregoing sense.

"... render it necessary for even the wisest of men to take a large portion of their *beliefs* from others."—Times, Nov. 13, 1876.

"*Belief* is great, life-giving."—Carrillo: *Heroes and Hero-worship*, Lect. II.

2. Specially:

(a) Religious belief, a creed, the system of doctrines held by the professors of any faith; yet more specially, Christianity.

"In the heat of general persecution, whereunto Christian *belief* was subject upon the first promulgation, it much confirmed the weaker minds, when relation was made how God had been glorified through the sufferings of martyrs."—Hooker.

(b) The statement of such system of doctrine. (Used specially of the Apostles' Creed.)

3. Christian Theol.: The implicit acceptance, by the aid of the Holy Spirit, of every statement which there is reason to believe comes from God. Spec., the acceptance of all that He has revealed regarding the divinity and sonship of Jesus Christ, His mission to the earth, His life, His death, His resurrection and ascension. For this *faith* is used more frequently than *belief*. [FAITH.]

"Faith is a firm *belief* of the whole word of God, of his gospel, commands, threats, and promises."—W. G. A. C.

¶ Crabb thus distinguishes between the terms *belief*, *credit*, *trust*, and *faith*:—"Belief is generic, the others are specific terms; we believe when we *credit* and *trust*, but not always *vice versa*. *Belief* rests on no particular person or thing; but *credit* and *trust* rest on the authority of one or more individuals. Everything is the subject of *belief* which produces one's assent: the events of human life are *credited* upon the authority of the narrator; the words, promises, or the integrity of individuals are *trusted*; the power of persons and the virtue of things are objects of *faith*. *Belief* and *credit* are particular actions or sentiments: *trust* and *faith* are permanent dispositions of the mind. Things are entitled to our *belief*, persons to our *credit*; but people repose *trust* or have *faith* in others. . . ."

"*Belief*, *trust*, and *faith* have a religious application, which *credit* has not. *Belief* is simply an act of the understanding; *trust* and *faith* are active moving principles of the mind in which the heart is concerned. *Belief* does not extend beyond an assent of the mind to any given proposition; *trust* and *faith* are lively sentiments which impel to action. *Belief* is to *trust* and *faith* as cause to effect: there may be *belief* without either *trust* or *faith*; but there can be no *trust* or *faith* without *belief*. We believe that there is a God, who is the creator and preserver of all His creatures; we therefore *trust* in Him for His protection of ourselves. We believe that Jesus Christ died for the sins of men; we have therefore *faith* in His redeeming grace to save us from our sins." (Crabb: *Eng. Synon.*)

¶ Professor Bain considers that *belief* largely depends upon the will. He says, "It will be readily admitted that the state of mind called *beliefs*, in many cases, a concomitant of our activity. But I mean to go farther than this, and to affirm that *belief* has no meaning, except in reference to our actions; the essence or import of it is such as to place it under the region of the will. We shall soon see that an intellectual notion or conception is likewise indispensable to the act of *believing*; but no mere conception that does not directly or indirectly implicate our voluntary exertions, can ever amount to the state in question." (Bain: *The Emotions and the Will*, chap. "Belief," p. 524.)

\* **bé-lié-fúl**, a. [Eng. *belief*; *full*.] Full of belief; disposed to believe.

"It is for thee sufficient to shew a mind *belieffull* and ready to obey..."—Udal: *Luke*, ch. I. (Richardson.)

\* **bé-lié-fúl-néssé**, s. [O. Eng. *beliefuful*; *-nessé*.] The quality of being disposed to believe.

"The diademe to have the godly *belieffulness* of the heathen to be praised, and yet do they not all the while amende their own wicked *unbelief*."—Udal: *Luke*, ch. iv. (Richardson.)

**bé-lié-v-á-ble**, a. [Eng. *believ(e)*; *-able*.] Able to be believed; credible. (Sherwood.)

"The witnessings ben maad *believable* ful mycha."—Wycliffe (Pr. xii. 6).

**bé-lié-v-á-ble-néss**, s. [Eng. *believable*; *-ness*.] The state of being believable.

"... the credibility and *believableness*, as I call it, of those promises and particular mercies."—Goodwin: *Works*, vol. iv., pt. I., p. 83. (Richardson.)

**bé-lé-ve**, \* **bé-lé-ve**, \* **bí-lé-ve**, \* **bý-lé-ve**, \* **by lyve**, v.t. & t. [A.S. *gelafan*, *gelyfan* = to believe. Compare also

A. Trans.: To accept as true, not on one's personal knowledge, but on the testimony of others, or on reasonings which appear more or less conclusive. It is used when the assent to the statement or proposition is of a very firm character, and also when it is weak and wavering. (It may be followed by the objective of the person whose word is accepted as true, or by the objective of the statement made.)

"That Cassio loves her, I do well believe it."—Shakesp.: Othello, II. 1. "Ten thousand things there are, which we believe merely upon the authority or credit of those who have spoken or written of them."—Watts: Logic.

B. Intransitive:

I. Ordinary Language:

1. Gen.: To accept a statement or proposition as true on the evidence afforded by the testimony of another person, or on reasonings of one's own.

2. Specially:

(a) Colloquial: To accept with some degree of doubt. (b) To exercise the grace of Christian faith. [See II.]

II. Theology:

1. To assent to the claim which Jesus Christ put forth to be the Messiah, the Son of God, and the Saviour, and place confidence in the efficacy of his sacrifice for sin. ¶ In Rom. x. 10 this belief is attributed to the heart. The opposition is that verse is not, however, so much between the heart and the intellect as between what is secret and personal and what is openly professed by the lips.

"For with the heart man believeth unto righteousness; . . ."—Rom. x. 10. It is followed (a) by in or on placed before the person or Being who is the object of faith. "I . . . ye believe in God, believe also in me."—John xiv. 1. "And they said, Believe on the Lord Jesus Christ, and thou shalt be saved, and thy house."—Acts xvi. 31. Or (b) by the clause of a sentence expressive of the tenor or proposition to which one publicly or tacitly assents.

"And Philip said, If thou believest with all thine heart, thou mayest. And he answered and said, I believe that Jesus Christ is the Son of God."—Acts xvii. 31.

2. To express such faith by the public enunciation of a creed. Thus the "Apostles' Creed, to be sung or said by the minister and the people," in the Liturgic worship of the Church of England, commences thus:—"I believe in God, the Father Almighty, . . ."

1. A Christian.

" . . . have been maintained by the universal body of true believers, from the days of the apostles, and will be to the resurrection."—Swift.

2. A professor of some other faith.

" . . . the soul of one believer outweighs all earthly kingdoms; all men, according to Islam too, are equal."—Caryle: Heroes, Lect. II.

B. Ch. Hist. (plur.): There are three British religious sects at present thus named—

- (a) Believers in Christ. (b) Believers meeting in the name of the Lord Jesus Christ. (c) Believers in the divine visitation of Joanna Southcott, prophetess of Exeter. ¶ The second of these, that named (b), appears for the first time in the Registrar-General's List for 1878.

běl(l), \*bělle, \*běl, s. [A.S. bella = a bell, a word imitated from the sound. In Dut. bel; Old Dut. belle. Connected with A.S. bellan = to bellow (BELLOW), and with peal (PEAL).]

A. Ordinary Language:

I. Literally:

1. An instrument of a particular form and material for producing sounds. It consists of a reversed cup, bearing at its apex an ear or canon, by which it is suspended from a beam or other fixed body above, and having hung internally a clapper or hammer, by the percussion of which on the reversed cup the required sound is generated. It is generally formed of bell-metal (q.v.). Golden bells are mentioned in connection with religious worship in Exod. xxviii. 33, 34. They alternated with pomegranate-like knobs on the lower part of the Jewish high-priest's blue robe of the ephod. Bells were found by Layard at Nimroud, near the site of old Nineveh, the alloy of which they were formed being ten parts of copper to one of tin. The Greeks and Romans used bells in camps, markets, and baths, as well as in religious observances. The introduction of large bells into churches is attributed to Paulinus, Bishop of Nola in Campania, about the year 400. Bede mentions their use in England towards the end of the seventh century. They were first cast in this country about A.D. 940. The great bell of St. Paul's Cathedral, in London, cast in 1709, is 67 feet in diameter; it weighs 11,470 lbs.; and Big Ben, of Westminster, cast in 1858, 30,324 lbs. These dimensions are, however, dwarfed by some Russian bells. That of the Kremlin, the greatest ever constructed, when re-cast in 1733, was enlarged

till it weighed 432,000 lbs. It is said, though some deny it, that this enormous mass was actually suspended for four years. In 1737, however, a fire caused it to fall. In 1837 a chapel was excavated below it, of which it was made to constitute the dome. Next, it is said, in size to the Russian bells are one at Amaraopors in Burmah, 260,000 lbs.; and one at Pekin, 130,000; both, of course, are for Buddhists worship. Bells are often affixed, both in England and elsewhere, to cattle, sheep, &c., when turned loose to feed, and are useful, especially in forests, to indicate where the animals are feeding. Sheep-bells of bronze, used in ancient Italy, are still to be seen in the museum at Naples.

2. A small hollow globe of metal, perforated and having within it a solid ball. This type of bell occurs in the hawk's bell. It is affixed to the animal, striking against its sides during flight, with the effect of emitting a sound.

"As the ox hath his bow, the horse his curb, and the tawcon his bells, so hath man his desires."—Shakesp.: As You Like It, III. 2.

II. Figuratively:

\*I. A clock.

"At six of the bells we gynne our play."—Strutt: Florida Angel-Cymman, III. 137. (Boucher.)

2. Anything shaped like an ordinary bell, or at least like the cup-shaped portion of it. Specially—

(a) The bell-like monopetalous corolla of various heaths, of the Campanula, &c. [See the compounds which follow.] So, in Scotch, Lint in the bell means "flax in flower." (Jamieson.)

"Where the bee sucks there suck I, In a cowslip's bell I lie."—Shakesp.: Tempest, vi. 1. (Song.)

"The humlog-bee, that hunt the golden dew, In summer's heat on tops of lilies feed, And creep within their bells to suck the balmy seed."—Dryden.

(b) The mouth of a funnel or trumpet; also of several wood wind instruments.

III. In special phrases:

1. Bell of the brace: The highest part of the slope of a hill. (Scotch.)

¶ Jamieson thinks this may be, perhaps, connected with bell (2) (q.v.).

2. For "curfew bell," "passing bell," "slints' or Sanctus bell," &c., see "curfew," "passing," &c., with which bell is in connection.

3. To bear away the bell: To win the prize at a race, where a bell was the usual prize.

"Among the Romans it [a horse race] was an Olympic exercise, and the prize was a garland, not cow they bore the bell away."—Saltmarsh: Chor., 33. (Nares.)

4. To bear the bell:

(a) Lit.: To be the bellwether of a flock, that is, the sheep which carries a bell; or to be the horse to which a bell is affixed, and which is made to go first in a drove of horses.

(b) Fig.: To be the first; to be superior to all others.

5. To carry away the bell: To carry off the prize in a race or other contest in which that prize is a bell. [Nearly the same as 3 (q.v.).] (Lit. & Fig.)

"The Italians have carried away the bell from all other nations, as may appear both by their books and works."—Hakewill.

6. To gain the bell: To win the prize at a race. [5.]

"Here lyes the man whose horse did gaine The bell, in race on Salisbury plain."—Gautier: Remains, p. 88. (Nares.)

7. To lose the bell: To be worsted in a contest, so that the antagonist gains the bell or other prize.

"But when in single fight he lost the bell."—Fairfax: Tasso, xvii. 69.

8. To curse by bell, book, and candle (in the Roman Catholic Church): To excommunicate; a bell being tolled, the book of offices for the purpose used to be read from, and a candle (or, according to Nares, three candles) extinguished with certain ceremonies. A form of excommunication, ending, "Doe to the book, quench the candle, ring the bell, Amen, Amen," was extracted from the Canterbury Book by Sir Thomas Ridley or his annotator, J. Gregory. (Nares.)

"Bell, book, and candle shall not drive me back, When gold and silver beckes me to come on."—Shakesp.: King John, III. 1.

9. To ring a bell backwards: To do so in the way described, as was formerly the practice. (a) Spec.: That warning might be given of fire.

běl, běj; běl, jěl; cat, cěl, chorus, čin, beňč; go, gem; thin, this; sin, sč; expect, Xenophon, exist. -ing. -cian, -tian = šan. -tion, -sion = šün; -tion, -sion = zhun. -cious, -tious, -sious = šús. -ble, -dle, &c. = bpl, dpl.

"Then, sir, in time  
You may be remembered at the quenching of  
Fird houses, when the bells ring backward, by  
Your name upon the buckets."  
*City Match (Old Play), ix. 207.*

Or (b) *Gen.*: On the rise of any sudden  
danger in a city or town.

"Dundas be mounted, he rides up the street:  
The bells are rung backward, the drums they are  
beat."  
*Scott: Bonnie Dundee.*

(c) As a mark of sorrow.  
"Not concluded with any epithalamiums or songs  
of joy, but contrary—his bells ring backward."  
*Gayton: Fest. Notes, p. 253.*

10. To shake the bells: A figurative phrase  
taken from the shaking of bells tied to a hawk  
or falcon, which takes place when the bird  
flies. [B. 1.]

"Neither the king, nor he that loves him best,  
The proudest he that holds up Lancaster,  
Dares stir a wing, if Warwick shakes his bells."  
*Shaksp.: 3 Henry VI., l. 1.*

### B. Technically:

I. *Her.*: Church bells are used as a heraldic  
emblem; so also are hawk's bells.

II. *Naut.*: At sea the sub-divisions of a  
"watch" of four hours' duration are noted by  
a half-hourly striking of a bell with a clapper.  
Thus the phrase, "it is two bells," means an  
hour of the watch has elapsed; three bells,

specially irritated that he had made an archi-  
tect—or as they irreverently said a mason—by  
name Cochrane, Earl of Mar, plotted forcibly  
to remove the plebeian whom they disliked  
from the royal presence. At their secret con-  
clave, which was held in Lander Church in  
1482, Lord Gray, who was fearful about the  
result of the enterprise, told the apologue of  
the mice failing to "bell the cat." [See *Bell  
the cat*, under *BELL, v.t.*] To which the daring  
Angus replied, "I understand the moral, and

A. *Transitively:*

1. *Lit.*: To put a bell upon.

2. *Fig.*: At great personal risk to attempt  
to render the assault or hostility of an adver-  
sary futile. The signification is derived from  
the following apologue. A colony of mice,  
losing some of their number through the de-  
predations of a cat, held a conference to try to  
devise measures for their preservation. When  
all were perplexed, a young mouse stood up,  
and in a florid speech proposed that a bell  
should be affixed to the tail of the cat. This,  
of course, would ring whenever she moved,  
and thus give warning of her approach. The  
young mouse sat down amid loud applause,  
on which an old and experienced mouse asked  
if their young friend would now be kind  
enough to inform them who would bell the  
cat. The orator had never thought of this,  
and was speechless. [*Beli the cat*, under

It has been held to include such kinds of literature as require for their production imagination and taste, rather than study and reflection. *Littre*, without doubt, giving the actual usage of the term *belles-lettres* in France, makes it include grammar, eloquence, and poetry. In England, poetry, fiction, rhetoric, philology, and even history, are generally included within its limits; but whatever may have been the case in a more backward state of thought than that which at present exists, it is a satire on philology, history, and grammar to regard them as studies in which imagination is predominant.

"When a revolted party of great numerical strength are able to form a regular government and rule over the whole or part of the territory which they claim, humanity dictates that they should not be treated as rebels guilty of treason, but should, if captured, be regarded as prisoners of war. To attain this result, it is needful for those who have risen in arms against the government to make every effort to obtain for their party the position of belligerents. In the contest between the Federalists and Confederates in the war of 1861—1865, the latter section of the American people, at the very commencement of the struggle, claimed the privileges of belligerents. Their demand was promptly acceded to by the British Government, on which the Federal authorities took umbrage, contending that the recognition had been premature, whilst the British maintained that it could not have been refused or delayed.

**bél-lôws**, \* **bél-lôwes**, \* **bel-ous**, s.

[A.S. *blast-belg*, *blast-belg* = a blast-bag, a bellows; from *blast* = a blast of a wind or burning; and *belg*, *belgig*, *bylgig*, *blig*, *belg*, *bylg* = a buige, budget, bag, purse, belly; Sw. *blas-båg*; Dan. *blasbælg*; Dut. *blaasbalg*; Ger. *Blasbalg*, from *blas* = a bladder, *blasen* = to blow; O. H. Ger. *balch*, *bal* = skin, bellows. In Goth. *balgs*, *bylg*, *bylga* = a mail, a budget; Ir. *bulg*, *bolg* = a bellows; Gael. *belg-aeididh* = a bellows; Lat. *foliis* = a leathern sack, hence (3) a bellows; cognate with *pellis*, the hide of an animal. Wedgwood considers it akin also to Lat. *utera*, † *bulga* = the womb, and Gr. *βελγῆ (bolgê)* [βόλγα (bolga), *Liddell & Scott*] = the womb; but considers the word most nearly the primary one, Gael. *balgan* = a water bubble.] [BAO, BELLY.]

**I. Ordinary Language:**

1. *Lit.*: An instrument for blowing the fire in manufactories, forges, or private houses. Its sides are so formed and worked that the upper one alternately rises and falls, with the effect of compelling the chest or bladder-like instrument first to expand and then to contract; the former process causing the air to enter the interior, and the latter one to leave it by means of a pipe or tube designed to conduct it to the portion of a fire which it is to blow. In a hand-bellows there are handles to be grasped; in a larger instrument designed for a manufactory, and called a *blowing-*

*machine*, the propulsive power is obtained by machinery.

"Week in, week out, from morn till night,  
You can hear his bellows blow."  
*Longfellow: The Village Blacksmith*.

¶ *Bellows* may be singular with the article a before it, or may enter into the phrase "a pair of bellows," in which case it is plural.

"Thou'lt neither, like a bellows, swell't thy face,  
As if thou wert, to blow the burning mass  
Of melting ores."  
*Dryden*.

2. *Fig.*: It is used—

(1) Of the lungs.

"The lungs, as bellows, supply a force of breath; and the *arteria arteria* is as the nose of bellows, to collect and convey the breath."  
*Holder*.

(2) Of sighs or other manifestations of emotion.

"Blare sighs, into my inward furnace turn'd,  
For bellows serve, to kindle more the fire."  
*Sidney*.

**II. Technically:**

1. *Mechanics, Pneumatics, &c.*:

(1) The simple instrument described under A., l. 1, for blowing fires in houses. A pair of bellows, worked chiefly by the feet, is figured on an Egyptian monument attributed to the

ANCIENT EGYPTIAN BELLOW.

time of Thothmes III., B.C. about 1490, and one is mentioned in Jer. vi. 29: both of these were used for smelting metals [No. (2)]. The representation of a bellows for the hand, and presumably for domestic use, is found on an old Romsn lamp; it is exactly of the modern type.

(3) *The bellows of an organ, harmonium, concertina, or any similar instrument*: An instrument for supplying wind to the pipes, tongueae, and reeds. (*Stainer & Barrett*.)

"Twelve pair of bellows, ranged in stated row,  
Are joined above, and fourteen more below.  
These the full force of seventy men require,  
Who ceaseless toil, and piteously perspire;  
Each aiding each, till all the wind be prest  
In the close confines of the incumbent chest,  
On which four hundred pipes in order rise,  
To bellow forth that blast the chest supplies."  
*Mason: Easy on Church Music. (Frank from the Monk Wolstan, 16th cent.)*

2. *Hydrostatics, &c. Hydrostatic Bellows*: An instrument designed as a toy rather than for use. It is, however, of some utility as illustrating what is called the hydrostatic paradox. Two horizontal flat boards, united by leather folded at the sides so as to be capable of expansion, constitute a chamber, into which water is introduced from a long narrow pipe rising vertically. By hydrostatical law this water will act with such pressure on the interior of the chamber that it will force the upper board to rise as far as the leather will permit, even if heavy weights be put upon it to keep it down.

I. *Celtic Myth*: A superstition observance now or formerly practised among the Scottish and Irish Celts, as well as in Cumberland and Lancashire. The Scotch observed the Beltane festival chiefly on the 1st of May (old style), though in the west of that country St. Peter's Day, June 29, was preferred. In Ireland there were two Beltanes, one on the 1st of May, and the other on the 21st of June. The ceremonies varied in different places, but one essential part of them everywhere was to light a fire. At Callander, in Perthshire, the boys went to the moors, cut a table out of sods, sat round it, lit a fire, cooked and ate a custard, baked an oatmeal cake, divided it into equal segments, blackened one of these, drew lots, and then compelled the boy who drew out the blackened piece to leap three times through the fire, with the view of obtaining for the district a year of prosperity. In Ireland cattle were driven through the fire. Originally human sacrifices may have been offered, and then, as primitive society began to discern the cruelty of this practice, it may have been deemed enough for the victim to pass through the fire in place of being burnt to death. Then, cattle would be substituted for human beings, and, last of all, cakes, meal, and fruit would be offered in the natural course of transition from bloody to unbloody sacrifices. [SACRIFICE, s., II. 1.] Merry-makings came at length to attend the Beltane festival. [See the examples under the compound words.]

"At Beltane, quhen ilk bodie bowms  
To Pehlu to the Play,

*Church Hist.* (pl. *Benedictines*): The followers of St. Benedict, of Nursia in Italy. He was born in A.D. 480, and was educated in part at Rome. At the age of fourteen he left that city for Subiaco, now Subiaco, a place about forty miles distant, where he spent thirty-five years, at one time as a solitary recluse, at another as head of a monastic establishment. In 529 he removed to Monte Cassino, fifty miles further south, where, converting some pagan worshippers of Apollo, he transformed their temple into a monastery and became its abbot. He composed rules for its

fāte, fāt, fāre, amidst, whāt, fāl, father; wē, wēt, hēre, campl, hēr, thère; pine, pīt, sīre, sir, marine; gō, pēt, er, wōre, wōlf, wērk, whō, sōn; mūte, oūb, cūre, unite, cūr, rāle, fūll; trȳ, Sȳrian. æ, œ = é. ey = ā. qu = kw.

management, making every monk pledge himself to perfect chastity, absolute poverty, and implicit obedience in all respects to his superiors. He was to live in the monastery subject to his abbot. These vows were irrevocable, whereas up to that time the monks had been allowed to alter the regulations of their founder at their pleasure. The date of St. Benedict's death is generally placed in 543, though another account makes it 547. The rule he instituted was adopted at an early period by various other monastic communities; it was confirmed, about fifty-two years after the death of its founder, by Pope Gregory the Great, and was ultimately accepted with more or less enthusiasm by nearly all the monastic communities of the West, though its pristine severity became modified with the lapse of time.

As long as the Benedictines remained poor they were a blessing to the countries in which they lived, and especially to Germany, spending as they did several hours a day in gardening, agriculture, and mechanical labour, and another portion of their time in reading, besides keeping school outside the walls of their convents. Science and literature are also indebted to them for having copied many of the classical authors and preserved such knowledge as existed in their age. But when at length their merits had drawn much wealth to their order (individually they were not allowed to retain property), luxury and indolence sapped their virtues and diminished their influence for good. Afterwards becoming reformed, especially in France in the seventeenth century, the Benedictines again rendered service by the issue of an excellent edition of the Fathers.

The Benedictine habit seems to have been introduced after the age of St. Benedict. It consisted of a loose black coat or gown reaching to their feet, and having large wide sleeves. Under it was a flannel habit white in colour and of the same size, whilst over all was a scapular. The head-dress was a hood or cowl pointed at the tip, and boots were worn upon the feet. From the predominantly black colour of their attire they were sometimes called Black Monks. They must not be confounded with the Black Friars, who were Dominicans. [BLACK FRIARS.]

There were Benedictine nuns as well as monks. When they originated is uncertain. There were first and last many branches of Benedictines, as the Claterians, Celestines, Grandmontensians, Præmonstratensians, &c.

The rule of St. Benedict was little known in England during the early Saxon period, and though it received an impulse in the time of Edgar, yet it was not largely accepted till the period of William the Conqueror. At last, however, it rooted itself thoroughly, and at the dissolution there were 113 abbeyes, priories, and cells for monks, and 73 for nuns, with a total revenue of £65,877—nearly half the aggregate revenues of all the monastic orders.

"Crabb thus distinguishes between *benefaction* and *donation*:—"Both these terms denote an act of charity, but the former comprehends more than the latter. A *benefaction* comprehends acts of personal service in general towards the indigent; *donation* respects simply the act of giving and the thing given. *Benefactions* are for private use; *donations* are for public service. A benefactor to the poor does not confine himself to the distribution of money: he enters into all their necessities, consults their individual cases, and suits his *benefactions* to their exigencies; his *donations* form the smallest part of the good he will do.

**B. Technically:**

**† I. Feudal system:** An estate held by feudal tenure, the name being given because it was assumed that such possessors were originally gratuitous donations, "ex mero beneficio" of the donor. At first they were for life only, but afterwards they became hereditary, receiving the name of *fiefs*, and giving that of *benefices* over to church livings. (No. 2.)

2. **Eccles. Law, Ord. Lang., &c.:** Formerly, and even sometimes yet, an ecclesiastical living of any kind, any church endowed with a revenue, whether dignity or not. More generally, however, the term is reserved for parsonages, vicarages, and donatives, whilst bishoprics, deaneries, archdeaconries, and prebendaries are called dignities. In the opinion of Blackstone a close parallel existed between the procedure of the popes when they were in the plenitude of their power and that of the contemporary feudal lords. The former copied from the latter, even to the adoption of the feudal word *benefice* for an ecclesiastical living. (See No. 1.) Blackstone says:—

"The pope became a feudal lord; and all ordinary patrons were to hold their right of patronage under this universal superior. Estates held by feudal tenure, being originally gratuitous donations, were at that time denominated *benefices*: their very name as well as constitution was borrowed, and the care of the souls of a parish thence came to be denominated a *benefice*. Lay fees were conferred by investiture or delivery of corporal possession; and spiritual *benefices*, which at first were universally donative, now received in like manner a spiritual investiture, by institution from the bishop, and induction under his authority. As lands escheated to the lord in default of a legal tenant, so *benefices* lapsed to the bishop upon non-presentation by the patron, in the nature of a spiritual escheat. The annual tithes collected from the clergy were equivalent to the feudal render, or rent reserved upon a grant; the oath of canonical obedience was copied from the oath of fealty required from the vassal by his superior; and the *primer seigns* of our military tenures, whereby the first profits of an heir's estate were cruelly extorted by his lord, gave birth to as cruel an exaction of first-fruits from the beneficed clergy. And the occasional aids and talliages, levied by the prince on his vassals, gave a handle to the pope to levy, by the means of his legates a *latare*, *petere*-peace, and other taxations."

2. *Of an act:* Marked or dictated by benevolence; kind.

"Crabb thus distinguishes between the terms *beneficent*, *bountiful*, or *bounteous*, *munificent*, *generous*, and *liberal*:—"Beneficent respects everything done for the good of others; *bounty*, *munificence*, and *generosity* are species of *beneficence*: *liberality* is a qualification of

all. The first two denote modes of action; the latter three either modes of action or modes of sentiment. The alacrer well-wisher to his fellow-creatures is *beneficent* according to his means; he is *downtiful* in providing for the comfort and happiness of others; he is *munificent* in dispensing favours; he is *generous* in imparting his property; he is *liberal* in all he does. *Beneficence* and *bounty* are the peculiar characteristics of the Deity: with him the will and the act of doing good are commensurate only with the power: he was *beneficent* to us as our Creator, and continues his *beneficence* to us by his daily preservation and protection; to some, however, he has been more *bountiful* than to others, by providing them with an unequal share of the good things of this life. The *beneficence* of man is regulated by the *bounty* of Providence: to whom much is given, from him much will be required. Good men are ready to believe that they are but stewards of all God's gifts, for the use of such are less *downtifully* provided. Princes are *munificent*, friends are *generous*, patrons *liberal*. *Munificence* is measured by the quality and quantity of the thing bestowed; *generosity* by the extent of the sacrifice made; *liberality* by the warmth of the spirit discovered. *Munificence* may spring either from ostentation or a becoming sense of dignity; *generosity* from a generous temper, or an easy unconcern about property; *liberality* of conduct is dictated by nothing but a warm heart and an expanded mind.

**B. Law. Benefit of clergy (Privilegium clericale):** The advantage derived from the preferment of the plea "I am a clergyman." When, in medieval times, a clergyman was arraigned on certain charges he was permitted to put forth the plea that, with respect to the offence of which he was accused, he was not under the jurisdiction of the civil courts, but, being a clergyman, was entitled to be tried by his spiritual superiors. [CLERGY, CLERK.] In such cases the bishop or ordinary was wont to demand that his clerks should be remitted to him out of the king's courts as soon as they were indicted; though at length the custom became increasingly prevalent of deferring the plea of being a clergyman till after conviction, when it was brought forward in arrest of judgment. The cases in which the benefit of clergy might be urged were such as affected the life or limbs of the offender, high treason however excepted. In these circumstances laymen often attempted to pass themselves off as clergymen, when the practice was to bring a book end ask the accused person to read a passage. If he could do so, his plea of being a clergyman was admitted; if he failed, it was rejected. The practical effect of this was to give the bishop the power, if he felt so disposed, of removing every reader from the jurisdiction of the ordinary courts. In 1499, Henry VII. restricted the privilege. A layman able to read who pleaded his "clergy" could henceforth do so only once; and in order that he might be identified if he attempted it again, he was burnt in the hand. Henry VIII., in 1512, abolished benefit of clergy with regard to murderers and other great criminals. The practice of requiring the accused person to read was put an end to in 1706; but it was not till 1827 that the 7 and 8 Geo. IV., c. 28, known as Peel's Acts, swept the benefit of clergy itself away.

(a) Crabb thus distinguishes between the words *benefit*, *favour*, *kindness*, and *civility*:—"Benefits and favours are granted by superiors; kindnesses and civilities pass between equals. Benefits serve to relieve actual want; favours tend to promote the interest or convenience. Kindnesses and civilities serve to afford mutual accommodation by a reciprocity of kind offices. Kindnesses are more endearing than civilities, and pass mostly between those known to each other; civilities may pass between strangers. Dependence affords an opportunity for conferring benefits; partiality gives rise to favours; kindnesses are the result of personal regard, civilities of general benevolence. Benefits tend to draw those closer to each other who by station of life are set at the greatest distance from each other: affection is engendered in him who benefits, and devoted attachment in him who is benefited. Favours increase obligation beyond its due limits; if they are not asked and granted with discretion, they may produce servility on the one hand, and haughtiness on the other. Kindnesses are the offspring and parent of affection; they convert our multiplied wants into so many enjoyments: civilities are the sweets which we gather in the way as we pass along the journey of life."

(b) *Benefit, service, and good office* are thus discriminated:—"These terms, like the former (*v. Benefit, favour*), agree in denoting some action performed for the good of another, but they differ in the principle on which the action is performed. A *benefit* is perfectly gratuitous, it produces an obligation: a *service* is not altogether gratuitous; it is that at least which may be expected, though it cannot be demanded: a *good office* is between the two; it is in part gratuitous, and in part such as one may reasonably expect. Benefits flow from superiors, and services from inferiors or equals; but *good offices* are performed by equals only. Princes confer benefits on their subjects; subjects perform services for their princes; neighbours do good offices for each other. Benefits consist of such things as serve to relieve the difficulties, or advance the interests, of the receiver: services consist in those acts which tend to lessen the trouble, or increase the ease and convenience, of the person served: good offices consist in the use of one's credit, influence, and mediation for the advantage of another; it is a species of voluntary service. Humanity leads to benefits; the zeal of devotion or friendship renders services; greed and good will dictates good offices." (Crabb: Eng. Synon.)

A. Ordinary Language:

1. The disposition to look with kind feeling on man and other living beings, and to do them good. *Used*—

(a) Of God, as the Being entertaining such kind feeling.

"Grasp the whole worlds of reason, life, and sense, in one close system of *benevolence*." Pope: *Essay on Man*, iv. 363.

(b) Of man, as doing so.

"*Benevolens* is mild; nor borrows help, Save at worst need, from bold importunate forces." Wordsworth: *Excursion*, bk. vii.

2. An act prompted by kind feeling towards its object.

B. Technically:

1. Phren.: The organ of *benevolence* is fixed by phrenologists on the middle of the anterior part of the head, behind the spot where the forehead and the hairy scalp meet. [PHRENOLOG.]

2. Law & Eng. Hist. (*pl. Benevolences*): The attractive name formerly given to compulsory loans to disguise their real character. Every one, however, saw through the transparent device. It is believed that benevolences were levied as early as the Anglo-Saxon time. They were inconsistent with the provisions of Magna Charta, gained in 1215, yet they continued to be exacted. One notable benevolence was that raised by Edward IV. in 1473. In 1484, Richard III. gained popularity by procuring a parliamentary condemnation of the system, and the next year imposed a benevolence, as if nothing had happened. Henry VII. in 1492, and James I. in 1613, raised money in a similar way; and in the reign of Charles I. the exaction of benevolences was one of the popular grievances which produced the civil war, though less potent in the effects which it produced than the celebrated "ship-money." [SHIP-MONEY.] The Bill of Rights, passed in February, 1689, once more declared them illegal, and this time with effect. "Benevolences," "aids," and "free gifts," have now given place to taxes, boldly called by their proper name.

"After the terrible lesson given by the Long Parliament, even the Cabal did not venture to recommend *benevolences* or ship-money." *Macaulay: Hist. Eng.*, ch. ii.

(a) Crabb thus distinguishes between *benevolence* and *beneficence*.—"Benevolence is literally well willing; *beneficence* is literally well doing. The former consists of intention, the latter of action; the former is the cause, the latter the result. *Benevolence* may exist without *beneficence*; but *beneficence* always supposes *benevolence*: a man is not said to be *beneficent* who does good from sinister views. The *beneficent* man enjoys but half his happiness if he cannot be *beneficent*; yet there will still remain to him an ample store of enjoyment in the contemplation of others' happiness. He who is gratified only with that happiness which himself has been instrumental in producing, is not entitled to the name of *beneficent*."

(b) The following is the distinction between *benevolence*, *benignity*, *humanity*, *kindness*, and *tenderness*.—"Benevolence and *benignity* lie in the will; *humanity* lies in the heart; *kindness* and *tenderness* in the affections. *Benevolence* indicates a general good will to all mankind; *benignity* a particular good will, flowing out of certain relations. *Humanity* is a general tone of feeling; *kindness* and *tenderness* are particular modes of feeling. *Benevolence* consists in the wish or intention to do good; it is confined to no station or object; the *beneficent* man may be rich or poor, and his *benevolence* will be exerted wherever there is an opportunity of doing good. *Benignity* is always associated with power, and accompanied with condescension. *Benevolence* in its fullest sense is the sum of moral excellence, and comprehends every other virtue; when taken in this acceptation, *benignity*, *humanity*, *kindness*, and *tenderness* are but modes of *benevolence*. *Benevolence* and *benignity* tend to the communicating of happiness; *humanity* is concerned in the removal of evil. *Benevolence* is common to the Creator and His creatures; it differs only in degree; the former has the knowledge and power as well as the will to do good; man often has the will to do good without having the power to carry it into effect. *Benignity* is ascribed to the stars, to heaven, or to princes; ignorant and superstitious people are apt to ascribe their good fortune to the *benign* influence of the stars rather than to the gracious dispensations of Providence. *Humanity* belongs to man only; it is his peculiar characteristic, and is as universal in its application as *benevolence*; wherever there is distress, *humanity* flies to its relief. *Kindness* and *tenderness* are partial modes of affection, confined to those who know or are related to each other: we are *kind* to friends and acquaintances, *tender* towards those who are near and dear.

C. As substantive:

I. Ordinary Language:

1. Literally (of things material):

(1) The state of being curved; flexure, curvature.

(2) The amount or degree of the curvature, the degree of flexure.

"There are divers subtle inquiries concerning the strength required to the bending of bows, the force they have in the discharge, according to the several bents, and the strength required to be in the string of them."—Wilkins.

"A mountain stood, Threatning from high, and overlook'd the wood; Beneath the low ring brow, and on a bent. The temple stood of Mars armipotens." Dryden: Potamon & Arctic, II. 243-44.

2. Figuratively (of what is immaterial more frequently than of what is material):

(1) Tendancy. Used—

(a) Of matter under the operation of natural law.

"If, for example, he wishes to know how a mass of fluid would shape itself, if at liberty to follow the bent of its own molecular forces."—Tyndall: Frag. of Science, 3rd ed., xiv. 405.

(b) Of the mind or of the heart: Inclination, disposition, proclivity, whether slight or irresistibly powerful.

"In this sense it may be followed by to, towards, or for.

"He knew the strong bent of the country towards the house of York."—Bacon.

"Let there be propensity and bent of will to religion, and there will be the same sedulity and indefatigable industry."—South.

(2) Full stretch, utmost power of the mind, the heart, or the will. The metaphor is that of a bow drawn back to the utmost.

"They fool me to the top of my bent."—Shakspeare, Hamlet, III. 2.

(3) A turning point; a change of subject, or of anything else.

"The exercising the understanding in the several ways of reasoning, teacheth the mind suppleness, to apply itself more dexterously to bents and turns of the matter, in all its researches."—Locke.

II. Technically:

1. Arch. & Carp.: One section of the frame of a building, which is put together on the ground or foundation, and then raised by holding the feet of the posts and elevating the upper portion. A bent consists of posts united by the beams which pass transversely across the building. When raised it is secured by the beams of the side to the other bents. (Knight.)

(a) Crabb thus distinguishes between bent, curved, crooked, and awry:—"Bent is here the generic term, all the rest are but modes of the bent; what is bent is opposed to that which is straight; things may therefore be bent to any degree, but when curved they are bent only to a small degree; when crooked they are bent to a great degree: a stick is bent any way; it is curved by being bent one specific way; it is crooked by being bent different ways. Things may be bent by accident or design; they are curved by design, or according to some rule; they are crooked by accident or in violation of some rule: a stick is bent by the force of the hand; a line is curved so as to make a mathematical figure; it is crooked so as to lose all figure. Awry marks a species of crookedness, but crooked is applied as an epithet, and awry is employed to characterise the action; hence we speak of a crooked thing, and of sitting or standing awry."

(b) Bent, bias, inclination, and prepossession are thus discriminated:—"All these terms denote a preponderating influence on the mind. Bent is applied to the wills, affections, and powers in general; bias solely to the judgment; inclination and prepossession to the state of the feelings. The bent includes the general state of the mind, and the object on which it fixes a regard; bias, the particular influential power which sways the judging faculty: the one is absolutely considered with regard to itself; the other relatively to its results and the object it acts upon. Bent is sometimes with regard to bias as cause is to effect; we may frequently trace in the particular bent of a person's likes and dislikes the principal bias which determines his opinions. Inclination is a faint kind of bent; prepossession is a weak species of bias: an inclination is a state of something, namely, a state of the feelings; prepossession is an actual something, namely, the thing that prepossesses." (Crabb: Eng. Synon.)

I. In England:

1. Of the plants so called. Bent (sing.), bents (pl.): A general form meaning usually—

(1) The old stalks of various grasses. Thus near London the word is applied chiefly to the Reed Canary-Grass (Phalaris arundinacea); in South Buckinghamshire and Cumberland principally to the Crested Dog-tail Grass (Cynosurus cristatus); in the north of Yorkshire to the Fine Bent-grass (Agrostis vulgaris); in Suffolk to the Rushy Sea Wheat-grass (Triticum junceum); and in the East of England generally, as in Scotland, to the Sea Reed, Psamma arenaria, called also Ammophila arundinacea.

(2) Various stiff-stalked endogenous plants not admitted by botanists to belong to the Gramineae, or order of Grasses proper. Thus Bailey applies the term bent to the Lake Clulrush, or Bull-rush (Scirpus lacustris). In Yorkshire and the north of England generally it is used of the Heath Rush (Juncus squarrosus), one of the Juncaceae (Rushes).

(3) Various dry or stiff-stalked plants not even belonging to the Endogenous sub-kingdom. Thus in Wilts and East Yorkshire the name is applied to the Greater Plantain (Plantago major), and the Ribwort Plantain (P. lanceolata); in Wilts to the first of these two plants; in Cheahire to two Heathie, the Fine-leaved Heath (Erica cinerea), and the Common Ling (Calluna vulgaris).

2. Of the place where they grow: A place overspread with bents. [II. 2.]

The essential principles of Benthamism were that the aim or end of all human life is happiness—of the kind derived from the absence of pain and the presence of enjoyment. To put forth efforts, then, for the greatest happiness of the greatest number should be the supreme aim of governments and of private individuals, and is itself the highest morality.

"Yes, hollow Formulism, gross Benthamism, and other unheroic atheistic insincerity, is visibly and ever rapidly declining."—Carlyle: Heroes, Lect. v.

It crystallises in long, slender, white, square prisms; it dissolves in 400 parts of cold water, also in hot alcohol. When mixed with putrid matter, it forms benzoic acid. Hippuric acid is monobasic; hippurates of the alkalies are very soluble. It can be formed by the action of benzoyl chloride on silver amidacetate. It is decomposed by alkalies into amidacetic acid and benzoic acid.

**bén-za-míde, s.** [Eng. *benz(oin); amide.*]

*Chem.:* N  $\begin{matrix} \text{H} \\ | \\ \text{C} \\ | \\ \text{C}_6\text{H}_5\text{CO} \end{matrix}$  Obtained by heating ammonium benzoate; also by oxidising hippuric acid with lead dioxide. Benzamide is a crystalline substance, nearly insoluble in cold but easily soluble in boiling water, also in alcohol and ether. It melts at 115°, and volatilises at 290°.

**bén-zéne, s.** [Eng. *benz(oin)*, and suffix *-ene.*]

*Chem.:* C<sub>6</sub>H<sub>6</sub>. An aromatic hydrocarbon, also called benzol or phenyl hydride, discovered in 1825 by Faraday in the liquid condensed during the compression of oil gas; it was called by him bicarburet of hydrogen. In 1840, it was found in coal tar by C. B. Mansfield, who lost his life while experimenting with it on the 25th of February, 1855. Aniline is produced from it, which again is the source of the celebrated modern dyes, mauve, magenta, &c. It is obtained from the more volatile portion of coal-tar oil. It is also formed by distilling benzoic acid with lime. Benzene is a thin, colourless, strongly refracting liquid; it boils at 82°. It dissolves fats, resins, iodine, sulphur, and phosphorus; sp. gr. 0.885. Benzene is formed when acetylene is passed through a tube heated to dull redness. Many substitution products of benzene have been formed. The atoms of C and H are arranged as shown in the figure. The numbers placed against the C denote the position of the H atoms with regard to each other. Benzene can, when two atoms of H are replaced by chlorine, &c., or monatomic radicals, form three modifications, according as the replaced H is in the position 1-2, or 1-3, or 1-4. Benzene unites with chlorine or bromine in direct sunlight, forming additive compounds, C<sub>6</sub>H<sub>5</sub>Cl<sub>2</sub>.

**bén-zíle, s.** [Eng. *benz(oin)*, and suffix *-ile.*]

*Chem.:* C<sub>11</sub>H<sub>11</sub>O<sub>2</sub>. A crystalline substance obtained by the action of chlorine on benzoin; it melts at 90°. It is isomeric with dibenzoyl.

**bén-zil'-íc, a.** [Eng. *benzilic(e); -ic.*] Of or belonging to benzile.

**benzilic acid, s.**

*Chem.:* C<sub>11</sub>H<sub>11</sub>O<sub>2</sub>. It is called also diphenyl-glycollic acid. It is obtained by the action of alcoholic potash on benzoin. On saturating the alkaline solution with hydrochloric acid, the benzilic acid separates in small, colourless, transparent crystals, which melt at 120°.

**bén-zíne, s.** [*BENZOLINE.*]

**bén-zó'-áte, s.** [Eng. *benzo(ín); suff. -ate.*] [*BENZOIC ACID.*]

**bén-zó-gly-óol'-íc, a.** [Eng. *benzo(ín) glycolic(ol).*]

**benzoylcollic acid, s.**

*Chem.:* C<sub>9</sub>H<sub>7</sub>O<sub>4</sub>. Formed by treating hippuric acid with nitrous acid; then nitrogen is liberated. Benzoylcollic acid contains the elements of benzoic and glycollic (oxyacetic) acid, minus one molecule of water. It crystallises in colourless prisms.

**bén-zó-hél'-y-çin, s.** [Eng. *benzo(ín); helicin* (q.v.).]

*Chem.:* C<sub>10</sub>H<sub>10</sub>(C<sub>7</sub>H<sub>5</sub>O<sub>7</sub>). Produced by the action of dilute nitric acid on benzo-salicin. It is resolved by boiling with alkalia or acid into benzoic acid, salicyol, and glucose.

**bén-zó'-íc, a.** [Eng. *benzo(ín); -ic.*] Pertaining to benzoin, existing in benzoin.

**benzoic acid, s.**

*Chemistry:* C<sub>7</sub>H<sub>5</sub>O<sub>2</sub> or C<sub>6</sub>H<sub>5</sub>CO.OH. It is called also phenylformic acid. It is obtained by oxidation of benzylic alcohol by aqueous chromic acid; by oxidation of benzoic aldehyde, methyl-benzene, &c.; from benzene by acting on its vapour by carbonyl chloride, which converts it into benzoyl chloride, and decomposing this substance by water; by boiling hippuric acid with HCl; or by heating the calcium salt of phthalic acid with lime. Benzoic acid exists in a large quantity in gum-benzoin, from which it is obtained by sublimation. Benzoic acid is a monobasic aromatic acid; its salts are called benzoates, and are soluble, except the basic ferric salt. Calcium benzoate by dry distillation is resolved into calcium carbonate and benzophenone. But dry benzoic acid distilled with excess of quicklime is decomposed into carbonic dioxide and benzene. Benzoic acid has a slight smell when warmed; it melts at 121°, boils at 250°. It dissolves in 200 parts of cold and in 25 parts of boiling water, and also in alcohol. It forms light, feathery, colourless crystals.

**benzoic alcohol, s.** [*BENZYL ALCOHOL.*]

**benzoic aldehyde, s.**

*Chemistry:* Bitter-almond oil, C<sub>7</sub>H<sub>6</sub>O or C<sub>6</sub>H<sub>5</sub>CO.H. It is the aldehyde of benzylic alcohol, and is obtained by the oxidation of amygdalin with nitric acid; by digesting bitter almonds and water for six hours at 30° to 40°; by the action of nascent hydrogen on chloride of benzoil; or by distilling a mixture of calcium benzoate and formate. Pure benzoic aldehyde is a thin colourless liquid with a peculiar odour, sp. gr. 1.043, and boils at 180°; dissolves in thirty parts of water, and mixes with alcohol and ether. Exposed to the air, it absorbs oxygen, and is converted into benzoic acid. It forms crystalline compounds with alkaline bisulphites. Ammonia converts it into hydrobenzamide, a white crystalline body, which when boiled with aqueous potash, is converted into amarine.

**benzoic chloride, s.** [*BENZOYL CHLORIDE.*]

**benzoic oxide, s.**

*Chem.:* Benzoic anhydride, C<sub>6</sub>H<sub>5</sub>CO)O. C<sub>6</sub>H<sub>5</sub>CO)O. It is obtained by the action of benzoil chloride and potassium benzoate. It crystallises in oblique rhombic prisms, which melt at 42° and distil at 310°.

**benzoin, s.** [*BENZOIN, I.*]

**bén-zó'-ín, bén-zó'-íne, \*bél-zó'-ín, \*ben-óol, bén'-jé-min, s.** [*In Sw. ben-zoe; Ger. Benzoebaum, the tree and benzoé, benzoin, the gum; Fr. benjoin; Sp. benjui; Port. bejioim; Ital. benzoino. 1. (Generally of the corrupted form benjamin.)

*Botany, Comm., &c.:* A kind of resin obtained from a tree, the *Styrax benzoin*, which belongs to the order Ebenaceae (Ebenidae). It grows in Sumatra, Borneo, and the adjacent islands. Incisions are made in the tree from which the resin exudes, the latter when it comes being left to dry, and then being removed by a knife. Each tree yields

annually about three pounds of resin. It is used as a medicine in chronic diseases of the lungs, as an ingredient in perfumery, and in the incense of Roman Catholic and Ritualist churches. [STRAX.]

"Belsoin or benzoin is the resin of a tree."—Turner: *Herbar.* pt. II.

2. (Of the form benzoin, never benjamin.)

(1) *Bot.*: A genus of plants belonging to the order Lauraceae (Laurels). The species are found in North America and in Nepal. The berries of *Benzoin odoriferum* yield an aromatic stimulant oil. They are said to have been used during one of the American wars as a substitute for allspice. (*Treas. of Bot.*)

(2) *Phar.*: *Asa dulcis* as opposed to *A. fetida*. [ASA.]

(3) *Chem.*:  $C_{13}H_{12}O_2$ . A polymeric modification of benzoic aldehyde, which remains in the retort when the crude oil is distilled with lime or iron oxide to free it from hydrocyanic acid.

A. As substantive:

1. *Chem.* (of the form benzol): [BENZENE.]

2. *Min.* (of the form benzole): A fluid mineral detected in 1856, both in Rangoon tar and in the naphtha of Boroslaw in Galicia. (*Dana.*)

B. As adjective (of the form benzole): Consisting of, containing, or allied to, benzole.

*Min.* Benzole Group or Series: A group of minerals, placed by Dana under his simple hydrocarbons. He includes under it benzole, toluene, xylene, camole, and cynole. All are fluid at ordinary temperatures.

### ben-zó-líno, s. & a. [Eng. benzol; -ine.]

A. As substantive:

1. *Chem.*: Amarina, an organic base obtained from hydro-benzamide by boiling it with aqueous potash. Insoluble in water, but dissolves in alcohol, forming an alkaline solution which deposits small colourless prismatic crystals. It forms sparingly soluble salts. Its formula is  $C_{21}H_{19}N_3$ .

2. *Comm.*: Benzole, a name given to any volatile inflammable liquid hydrocarbon which burns with a luminous flame, chiefly to the following:—(1) *Coal-tar naphtha*, consisting principally of benzene and its homologues. It is used for removing grease from fabrics and as a solvent. Our lady readers should, however, be warned that if they wash kid gloves in benzoline with the view of removing stains of grease, they must not afterwards put the gloves on their hands, and hold them to the fire to dry. If they do, the vapour of the benzoline will ignite the gloves, which will flame fiercely. Within the last few years at least three cases of most fearful injury have arisen in this precise manner, one of them with fatal results. (2) *Petroleum spirit*, consisting of heptane,  $C_7H_{14}$ , and other paraffins. It is used as a solvent and also to burn in lamps. These different liquids are often sold mixed together; their vapour is explosive when mixed with air. [PETROLEUM.] On the 2nd of October, 1874, at 4:55 a.m., a loud explosion was heard over all London and far into the country around. It was found that a barge called the *Tilbury*, proceeding along the Regent's Canal, freighted with about five tons of gunpowder, and carrying in addition a quantity of benzoline, had blown up, killing three men on board, destroying itself, demolishing a bridge over the canal, and damaging many houses. Investigation was held which showed that the vapour of the benzoline escaping was ignited by a fire or light in the cabin, and at once exploded the gunpowder. It is not now permissible to carry gunpowder and benzoline together in the same boat.

"There was never a prince *bereaved* of his dependencies by his council, except there hath been an overgreatness in one councillor."—*Bacon: Essays*.

2. *Spec.*: To deprive of relatives, as a person does who causes the death or departure of any one, or as is done by Death itself personified.

"And Jacob their father said unto them, Me have ye *bereaved* of my children."—*Gen. xlii. 26*.

¶ (a) *Bereave* in this sense is followed by the objective of the person deprived of anything, while the thing itself has before it of (see examples under 1 and 2); or (b) in poetry the of may be omitted:

"Who this high gift of strength committed to me, In what part lodged, how easily *berest* me." *Milton: Samson Agonistes*.

• II. *With a thing for the objective*: To take away, to remove. In this case that which is left is put in the objective, and the person or thing losing it is preceded by *from*, or *thence* is used, or some similar word.

"That no new loss impression ever could *Bereave* it thence." *Spenser: F. Q. V. vi. 2*.

B. *Intransitive*:

"... abroad the sword *bereaveth*, at home there is as death."—*Lam. i. 20*.

¶ Crabth thus distinguishes between the *verba bereave*, to deprive, and to strip:—*To bereave* expresses more than *deprive*, but less than *strip*, which in this sense is figurative, and denotes a total bereavement: one is *bereaved* of children, *deprived* of pleasures, and *stripped* of property; we are *bereaved* of that on which we set most value. The act of *bereaving* does violence to our inclination; we are *deprived* of the ordinary comforts and conveniences of life: they cease to be ours; we are *stripped* of the things which we most want; we are thereby rendered as it were naked. *Deprivations* are preparatory to *bereavements*; if we cannot bear the one patiently, we may expect to sink under the other. Common prudence should teach us to look with unconcern on our *deprivations*: Christian faith should enable us to consider every *bereavement* as a step to perfection; that when *stripped* of all worldly goods we may be invested with those more exalted and lasting honours which await the faithful disciples of Christ.

1. The striped called a BARNACLE (q.v.).

2. The bernicle-geese.

bernicle-geese, bernacle-geese, bernacle-geese, s. A species of geese, *Anser leucopsis*, sometimes called also *Anser bernicla*. The connection in name with the striped called a barnacle was that the bird was supposed to be developed from the striped. The Solan Goose was also said to be so

developed. [See examples under BARNACLE.] Gerard, in his *Herbal*, wrote in 1636 as if he had seen the growth of the bird from the striped; but the celebrated Ray, in his edition of *Willughby*, published in 1678, rejected the myth, as the French naturalist Belon had done more than a century before. The Bernicle Geese has the upper part of the head, neck, and shoulders black; the rest of the upper parts marbled with blue, gray, black, and white; the sides ashy-gray; the lower parts white; the head and tail black. It spends the summer in the Northern latitudes, appearing in autumn abundantly in Ireland and on the north-west shores of Britain. On the eastern and southern coasts it is rarer, the Brent or Brant Geese (*Anser torquatus*) there taking its place. The food of the bernicle-geese consists chiefly of algae and the *Zostera marina*.

A. As substantive:

I. Mineralogy:

1. As a genus: A mineral genus, comprehending both the emerald and the beryl properly so called, the former bright emerald-green, from the presence of chromium, and the latter of other colours, from having iron instead of chromium. [EMERALD.] The composition is silica, 66.8; alumina, 19.1; glucina, 14.1 = 100. The hardness is 7.5-8; the sp. gr. 2.63-2.76. It is in lustre vitreous, more rarely resinous. It is brittle, transparent or translucent, and with feeble double refraction. The genus is always crystalline, never in any circumstances massive. Its crystals belong to the rhombohedral system, and are hexagonal prisms, either of regular form or variously modified.

2. As a species: A mineral species consisting of those varieties of the beryl genus which are transparent and colourless, or yellowish-blue, pale green, or rose-red, as distinguished from those which are bright green. The varieties are distinguished by their colours. Pliny recognises four or five of the following varieties:—(1) Colourless. (2) Bluish-green. [AQUAMARINE.] (3) Apple-green. (4) Greenish-yellow to iron-yellow and honey-yellow. It is the ancient chrysoberyllus, but not the modern chrysoberyl. [CHRYSOBERYL.] Davidssonite falls under this variety. (5) Pale yellowish-green, the ancient chrysoprasus, but not the modern chrysoprase. [CHRYSOPRASE.] (6) Clear sapphire blue, the hyacinthosonites of Pliny. (7) Pale sky blue, the aëroidea of Pliny. (8) Pale violet or reddish. (9) Opaque brownish yellow, of waxy or greasy lustre. (10) Colourless or white. [GOSHEWITE.] (Dana.) Transparent beryls are found in Siberia, India, and Brazil. The best Aquamarine is from Brazil; Davidssonite is from Rühnsław and other quarries near Aberdeen. Other varieties of beryl occur in Cornwall, near Dublin, and abroad. The beryl is a lapidary's gem.

II. The beryl of Scripture:

1. A gem, the Heb. טַרְשִׁישׁ (Tarshish), so called presumably as having been brought from one of the two places, perhaps Tartessus in Spain, denominated in Scripture Tarshish. It was probably the chrysolite or topaz, though some, with less likelihood, think it was amber. It constituted the fourth row of stones in the high-priest's breastplate. (Exod. xxviii. 20; xxxix. 13. See also Song v. 14; Ezek. i. 16; x. 9; xxviii. 13; Dan. x. 6.)

2. A gem, the rendering of the Sept. βήρυλλος (beryllion) in the Septuagint Greek of Job xxviii. 16 and Ezek. xxviii. 13. The Hebrew word is טֹרֶשׁ (shoham), translated "onyx" in those passages, and "onyx-stone" in Gen. ii. 12; Exod. xxviii. 9; xxxv. 9, 27. The species has not been properly identified.

3. The rendering of the Gr. βήρυλλος (beryllus) = the beryl (Rev. xxi. 20). It is made to constitute the foundation of the New Jerusalem.

"... the first foundation was Jasper... the fourth an emerald... the eighth beryl."—Rev. xxi. 19, 20.

B. As adjective: Of or belonging to the beryl in any of the foregoing senses. "... and the appearance of the wheels was as the colour of a beryl stone."—Ezek. x. 9.

\* beryl-crystal, s. An old name for the beryl, presumably derived from the fact that it is always crystalline. [BEAYL.]

beryl-like, a. Like a beryl. "It is scarcely possible to imagine anything more beautiful than the beryl-like blue of these glaciers."—Darwin: Voyage round the World, ch. x.

bēr-yī-lī-ā, s. [From beryllium (q.v.), BeO.] Oxide of beryllium = glucina. A light, tasteless, colourless powder, separated from alumina by its solubility in a cold concentrated solution of ammonium carbonate. It is soluble in caustic alkalis. It forms soluble colourless salts, which do not form alums nor give a blue colour with cobalt nitrate when tested by the blow-pipe. These salts have a sweet taste, hence the name glucina. Beryllium salts are precipitated as beryllia hydrate by (NH4)2S; the precipitate is dissolved by long boiling with NH4Cl.

bēr-yī-line, a. [Eng. beryl(yine).] Pertaining to a beryl, resembling a beryl. [Webster.]

bēr-yī-lī-ūm, bēr-lī-lī-ūm, s. [Latinised from Gr. βήρυλλιον (beryllion), dimin. of

βήρυλλος (beryllus) = a sea-green mineral, the beryl (q.v.).] Beryllium: symb. Be; at. wt. 9.3. A rare white malleable metal, the same as Glucinum; sp. gr., 2.1. It does not decompose water. Its melting-point is below that of silver. It is dissolved by caustic potash and dilute acids with the solution of hydrogen. It occurs as a silicate in Phenacite, also in the mineral Beryl along with aluminium silicate. [GLUCINIUM.]

bēr-zēl-y-an-ite, s. [In Ger. Berzeliit. Named after the great chemist and mineralogist the Baron Jauch von Berzelius.] A mineral placed by Dana in his Galena group. It consists of selenium, 88.4 to 40; copper, 61.6 to 64 = 100. It is a selenide of copper. It is a silvery-white species with a metallic lustre, occurring in Sweden and in the Harz.

bēr-zēl-y-ite, s. & a. [In Ger. berzeliit, berzeliit. Named after Berzelius.] [BERZELIANITE.]

A. As substantive: A mineral, called also Kuhnite (q.v.), but Dana prefers the name Berzeliite. It is massive, cleaving in one direction, is brittle, with a waxy lustre, and a dirty-white or honey-yellow colour. Hardness, 5-6; sp. gr., 2.52. Compos.: Arsenic acid, 58.46 to 58.51; lime, 20.96 to 23.22; oxide of magnesium, 15.61 to 15.63; oxide of manganese, 2.13 to 4.26. It occurs in Sweden.

B. As adverb (chiefly, though by no means exclusively, of the form besides): Moreover, over and above; in addition to this, more than that; not of the number, class, or category previously mentioned.

On concluding any subject, we may introduce a farther clause by a moreover: "moreover, we must not forget the claims of those who will suffer by such a change."

From Byzantium, the Latin name of an old Greek city (Byzantium, Byzantion), the site of which is occupied by part of modern Constantinople.]

I. Numismatology: 1. Properly a gold coin struck at Constantinople by the Byzantine emperors, and which, between the ninth and the fourteenth century, was the chief gold piece of money known in Europe. It varied in price, but was generally worth about 9a. Other bezants were coined by the Moors of Spain, and others still at Malines, in Flanders. Bezants, chiefly from Constantinople, were circulated in England from the tenth century to the time of Edward III., when they were gradually superseded by the English noble. [NOBLE.] The Constantinople bezant was generally in the form of an unbo, or of a dish, having on it a representation of the Saviour.

2. A white bezant, made of silver, and not of gold, worth, it is believed, about 2s. This is the bezant mentioned by Wycliffe and Purvey. That it was circulated in England appears from the extract from the "English Gilds" (about 1389) given below, though the word was sometimes used in a more general sense for any similar piece of money. [BYZANT.]

II. Her.: A gold roundlet representing the coin described under I., 1. It was introduced into English heraldry probably by the crusaders, who had received the coin which it represented in pay while on military service in the East.

**\*Old Pharmacy:**

**I. Lit.:** A name formerly given to

(1) A morbid secretion sometimes found in the intestines of the wild goat of Persia (*Capra Agagrus*), or any other Eastern ruminant. It consisted of a portion of the undigested food of the animal agglutinated into a ball. Its full name was *Lapis bezoar orientalis* = Oriental Bezoar stone. Not often met with, and having had attributed to it, without a particle of evidence, the power of acting as an antidote to all poisons, as well as curing many diseases, it sometimes fetched in the market ten times its weight in gold. Need it be added that it has disappeared from the modern pharmacopoeia of Europe and America, though faith in it still lingers in the East.

(2) A similar concretion from the intestines of the American llamas (*Auchenia lama* and *A. vicugna*). This was known as the *Lapis bezoar occidentalis* (Occidental or Western bezoar stone). It had never quite the reputation of its Eastern compeer, but has shared its fall in being at last contemptuously dismissed from the pharmacopoeia of all civilised lands.

"That quyk wole selle hir bi hir lye."—*Romance of the Rose*.

**\*bi nethe, prep. & adv.** [BENEATH.]

**bi, as a prefix.**

**I. Ordinary Language:**

(a) *Of Anglo-Saxon origin:* A prefix in many old or, more precisely, Middle English words, which afterwards came to be spelled with *be*; as *become* for *become*, or *bifore*, *biform*, *biformen*, for *before*.

(b) *Of Latin origin:* A prefix of which the oldest form was *dui*; as *duidens* for *bidens*. This brings it into close union with Lat. *duo*, Gr. *duo*, *duo* (*duo*) = two, and other cognate words. [Two.] Similarly the oldest form of Lat. *bis* = twice, was *duis*; as, *bellum* of old was spelled *duellum*. *Bi* in composition signifies two or twice. It corresponds to *di* (*di*) in Greek, and *dui* in Sanscrit.

**II. Chem.:** A prefix before words beginning with a consonant, the form before those commencing with a vowel being *bin*.

(1) *Bi* or *bin* is sometimes used to denote that two atoms of chlorine, sulphur, or oxygen, &c., are united to an element, as bichloride of mercury, HgCl<sub>2</sub>; bisulphide of iron, FeS<sub>2</sub>; binoxide of tin, SnO<sub>2</sub>. Instead of *bi*, the suffix *di* is now generally used; as carbon dioxide, CO<sub>2</sub>.

(2) *Bi* has also been used to denote an acid salt; that is, a salt in which only part of the hydrogen of the dibasic acid is replaced by a metal; as, bicarbonate of sodium, NaHCO<sub>3</sub> (properly called hydric-sodic carbonate); bisulphate of potassium, KHSO<sub>4</sub> (hydric potassic sulphate). These terms are now only used in commerce and pharmacy.

Children may receive an early *bias* that influences their future character and destiny. *Prepossessions* spring from casualities; they do not exist in young minds. *Prejudices* are the fruits of a contracted education. A *bias* may be overpowered, a *prepossession* overcome, and a *prejudice* corrected or removed. We may be *biased* for or against; we are always *prepossessed* in favour, and mostly *prejudiced* against." (*Crabb*: *Eng. Synon.*)

"Alle these articles that ther weren, That they thus on her cotes beren, For hit to me were impossible; Men myghte take of hem a *bible*, Twenty foote thykke I trowe." Chaucer: *House of Fame*, bk. III.

2. **Spec.** : Pre-eminently "the book" in comparison with which other literary productions are not worthy to be dignified with the name of books; or, if they be called books, it then becomes "the Book of books." The idea just expressed is founded on the etymology derived originally from the Christian Greeks, but now rooted in the languages of all the nations of Christendom. The first to use the term *βιβλία* (*biblia*) in this sense is said to have been Chrysaostom, who flourished in the fifth century. The word *scriptura* or *scriptures*, from the Latin *scriptura* = writing, *scripturae* = writings, conveys the analogous idea that the "Scriptures" are alone worthy of being called writings. This use of the word came originally from the Latin fathers, but it has been adopted not merely by the English, but by the other Christian nations of Europe. The high appreciation of the Bible implied in the use of these words arises from the fact that it is believed by the vast majority of Christians to be (with allowances for minute diversities of reading and errors of translation) the actual Word of God, and therefore infallibly true. This is implied, though not expressly stated, in the sixth of the Thirty-nine Articles.

"Holy Scripture containeth all things necessary to salvation: so that whatsoever is not read therein nor may be proved thereby is not to be required of any man that it should be believed as an article of the faith, or be thought requisite or necessary to salvation. . . ."  
The Westminster Confession of Faith is more specific.

"The authority of the Holy Scriptures, for which it ought to be believed or obeyed, dependeth not upon the testimony of any man or church, but wholly upon God (who is truth itself), the author thereof, and therefore it is to be received, because it is the Word of God."—*Westminster Conf. of Faith*, ch. I, § 4.

The Church of Rome does not differ from the several Protestant denominations respecting the divine authority of the books which the latter accept as canonical; it combines, however, with them the apocrypha and church traditions regarding faith and morals which Protestants reject.

Articles of Faith and symbolical books do not always express the real belief of all who nominally assent to them; and scattered through the several churches are a very large number of persons who hold that the Bible contains a revelation from God, instead of being of itself "the Word of God;" whilst a small number deny the Scriptures all special inspiration, and deal with them as freely as they would with the Mohammedan Koran, the Hindoo Vedas and Puranas, the Sikh Granth, or the Persian Zend Avesta.

The Bible consists of sixty-six books, constituting an organic whole.

In the Authorized English Version the Bible is divided into the Old and New Testaments, the former containing thirty-nine, and the latter twenty-seven books. These designations are taken from *antiquum testamentum*, in the Vulgate rendering of 2 Cor. iii. 14 and *novum testamentum* in verse 6. The Greek word is *διαθήκη* (*diathēkē*), the Sept. name of the Old Testament being Ἡ παλαιὰ διαθήκη (*Hē palaiā diathēkē* = the Old *Diathēkē*), and the Greek New Testament being termed Ἡ καινὴ διαθήκη (*Hē kainē diathēkē* = the New *Diathēkē*). *Διαθήκη* (*Diathēkē*) in Class. Greek, and in Heb. ix. 10, 17, signifies a testament or will, but generally, throughout the Septuagint, the Greek Testament, and the Greek ecclesiastical writers, it means a covenant. Hence the two primary divisions of the Bible had better have been called the Old and New Covenants rather than the Old and New Testaments. The old covenant is the one made with Adam and that entered into with Abraham and subsequently developed at Sinai; the new one that formed in connection with the advent and death of Christ.

The Old Testament was originally written in Hebrew, except Jer. x. 11; Ezra iv. 8 to vi. 18; vil. 12 to 26; and Dan. ii. from middle of verse 4 to vil. 23, which are East Aramaean (Chaldean). The New Testament was originally written in Greek, with the exception perhaps of St. Matthew's Gospel, which the Christian fathers Papias, Irenæus, Pantenus, Origen, Jerome, &c., state to have been published originally in Aramaean.

The order of the books in the Hebrew Bible is different from that which obtains in the English Scriptures, which in this respect follow the Greek Septuagint and the Latin Vulgate. The Jews divided the Old Testament primarily into three portions, called the Law, the Prophets, and the Kethubim or in Greek the Hagiographa. The Divine Redeemer alludes to this classification in Luke xxiv. 44, "that all things might be fulfilled which are written in the Law, and in the Prophets, and in the Psalms." The Psalms are the first book in the Hagiographa, and agreeably to the Jewish method of quoting, stand for the whole division. Such words as Genesis, Exodus, Deuteronomy, &c., are Greek, and taken from the Septuagint; the Hebrew generally names these and some other books by their initial word. Thus Genesis is called בְּרֵאשִׁית (*Bereschith*) = In the beginning. The following list exhibits the order and classification of the books in the Hebrew Bible:—

I. תּוֹרָה (*Torah*), the Law: Genesis, Exodus, Leviticus, Numbers, and Deuteronomy.

II. נְבִיאִים (*Neb'im*), the Prophets:

(1) *The former prophets*: Joshua, Judges, Samuel, Kings.

(2) *The later prophets*:

(a) *The great prophets*: Isaiah, Jeremiah, Ezekiel.

(b) *The small or minor prophets*: Hoses, Joel, Amos, Obadiah, Jonah, Micah, Nahum, Habakkuk, Zephaniah, Haggai, Zechariah, Malachi.

III. קְתוּבִים (*Kethubim*) = books; in Greek Hagiographa = Holy Writings:

(1) *Truth*: Psalms, Proverbs.

(2) *The five rolls*: Job, Song of Solomon, Ruth, Lamentations, Ecclesiastes, Esther, Daniel, Ezra, Nehemiah, Chronicles.

It is startling to find that in this arrangement Daniel does not figure among the prophets, but is relegated to the Hagiographa. It is remarkable also that Joshua, Judges, Samuel, and Kings are classified not as historic, but as prophetic writings.

A convenient classification for modern use divides the Old Testament books into three classes:—

(1) *The Historical Books*: Genesis—Ezra.

**bōil, bōy; pōut, jōwī; cat, cell, ohorus, chin, bench; go, gem; thin, this; sin, as; expect, Xenophon, exist. -īng. -clan, -tian = shan. -tion, -sion = shūn; -tion, -sion = zhūn. -tious, -sious. -cious = shūs. -ble, -dle, &c. = bel del.**

(2) *The Poetical Books*: Job—Song of Solomon.

(3) *The Prophetical Books*: Isaiah—Malachi. (The weak point about this division is that most of the prophetical books falling under the third category were written not in Hebrew prose but in poetry.)

A similar division for the New Testament is into—

(1) *Historical Books*: Matthew—The Acts of the Apostles.

(2) *Epistles*: Romans—Jude.

(3) *The Prophetical Book*: Revelation. (For a description of the several books, see GENESIS, EXODUS, &c.)

The Bible has given rise to several sciences of its own, and specially to the following:—

(1) *Apologetics*, not a good name, for it is liable to be misunderstood, as it was even by George III., who, on being told that Bishop Watson had published "an apology for the Bible," remarked that he did not before know that the Bible required an apology. The word is used in the Greek sense of defence, the Christian apologist does not admit the existence of error in the Bible which he defends. [APOLOGETICS, APOLOGY.]

(2) *Biblical Criticism*, which seeks to ascertain precisely what books are inspired, and bring the text of these to the most perfect state of purity. [BIBLICAL CRITICISM.]

(3) *Hermeneutics*, from the Gr. ἑρμηνευτικός (hermeneutikos) = of or for interpreting: its aim is to ascertain the principles which should be followed in biblical interpretation. [HERMENEUTICS.]

For the several versions of the Bible see VERSIONS and AUTHORISED. Altogether apart from the claims put forth by the Bible to be a, or rather the, Divine Revelation, the Authorized version is the first English classic; and the history of Europe and the world would be a hopeless enigma to any one who knew nothing of the Bible.

"You cottager, who weaves at her own door,  
Fillow and hobbins all her little store."

Just knows and knows no more her Bible true:  
A truth the brilliant Frenchman never knew;  
And in that charter reads, with sparkling eyes,  
Her title to a treasure in the skies."

Cooper: *Truth*.

**B.** As adjective: Pertaining to, or in any way connected with, the Bible. See the compounds which follow.

**Bible-Christians, s.**

*Ecclesiology*: A Christian sect, called also Bryanites. It was founded by Mr. William O. Bryan, a Wesleyan local preacher in Cornwall, who, separating in 1815 from the main body of the Wesleyans, began to form separate societies. In 1829 he left the body he had formed. In the religious census of 1851 (the only one hitherto taken) they are credited with 482 places of worship, attended, on the census Sunday (with allowances for imperfect returns) by 14,902 in the forenoon, 24,345 in the afternoon, and 34,812 in the evening. The strength of the Bible Christians is in the south-west counties of England. (Mann: *Relig. Census*.)

**Bible Defence Association.**

*Ecclesiology*: A Christian sect figuring in the English Registrar-General's returns.

**Bible-oath, s.** An oath sworn upon the Bible.

**Bible Society.** Any society constituted for multiplying copies of the Bible and, as far as the financial resources at its disposal will permit, diffusing them abroad. Of these societies the following may be enumerated:—

1. *The British and Foreign Bible Society*: As there were brave men before Agamemnon, so the Word of God was circulated before this great Society came into existence. The following associations made the circulation of the Scriptures one of the objects at which they aimed:—The Society for the Propagation of the Gospel in New England, incorporated in 1649, and again in 1661; the Society for Promoting Christian Knowledge, established in 1698; the Society for the Propagation of the Gospel, established in 1701; the Society in Scotland for Propagating Christian Knowledge, incorporated in 1709; the Society at Halle, founded in 1712; the Society for Promoting Religious Knowledge among the Poor, established 1750; and finally, the Society for the Support and Encouragement of Sunday Schools, established

in 1755. Two societies made it their primary aim, viz.:—The Bible Society for Soldiers and Sailors, established in 1780 and the French Bible Society, commenced in London in 1792, its object being the circulating of the Scriptures in France. In 1803 was organized The British and Foreign Bible Society, the largest and most important in the world. Its rise to a leading position was rapid, and the sphere of its operations has enormously extended. Its work is supplemented by that of the Liberatorian Bible Society, founded in 1806, and the National Bible Society of Scotland, founded in 1860.

2. *Bible Societies in America*: Next to the British and Foreign Bible Society, in the extent of its operations, comes the AMERICAN BIBLE SOCIETY, founded in New York, in 1816, and which has its headquarters in the large and magnificent building, in that city, known as the "Bible House." The story of the Bible in America, however, begins earlier than this. Every Bible in the English language in America before the war of the Revolution was brought from the other side of the Atlantic Ocean, the English government holding a monopoly over the sale of the Word of God in the colonies as over so many articles of merchandise besides. The first English Bible printed in America was issued at Philadelphia in 1782, by Robert Aitken, the proposal to publish it calling out a resolution of high approval from Congress. The first Bible Society instituted in the United States was that of Philadelphia in 1808. It was followed in May, 1809, by the Connecticut Bible Society, at Hartford; in July, 1809, by the Massachusetts Bible Society, at Boston; in November, 1809, by the New York Bible Society, at New York; and in December of the same year by the New Jersey Bible Society, at Princeton. By 1816 between 50 and 60 of such local societies had been formed, with no bond of union beyond the fact that they were all devoted to the publication of the same book. The need of a national institution was by this time strongly felt, and in 1816 a convention of representatives of Bible Societies was held in New York, which organized the American Bible Society, an institution which was incorporated in 1841, twenty-five years later, and has had a career of usefulness only second to that of its British predecessor.

As regards the work done by these societies it may be remarked that the British and Foreign Bible Society has distributed since its formation considerably more than 100,000,000 Bibles, and that it has, in Britain and the colonies, between 5000 and 6000 auxiliary and branch societies. The American Bible Society has fully 7000 auxiliary societies, in all parts of the United States. Issues annually about 1,500,000 Bibles, New Testaments and other parts of Scripture, and has distributed in all about 55,000,000 copies. Its income is over \$500,000 per annum. This Society has promoted the translation of the Bible, in whole or in part, into 83 languages and dialects, including those of the most populous non-Christian countries, as China, Japan, Turkey, Arabia, Persia, and Egypt. The British Society has had translations made into 226 languages and dialects, the Bible being now printed in the languages of 800,000,000 of the human race. Other American Societies embrace The Bible Association of Friends in America, organized in 1828, The American and Foreign Bible Society, organized in 1836, and the American Bible Union, organized in 1850.

3. *German Bible Societies*: The first association ever formed for the sole purpose of providing copies of the Scriptures for those who were destitute of them, was founded at Halle in Germany, in 1710, by Baron Hildebrand von Canstein. This institution down to 1834, when other Bible Societies had become engaged in the same work in that country, had distributed over 2,750,000 copies of the Bible and about 2,000,000 copies of the New Testament. Of the existing numerous Bible Societies of the country, the Prussian Central Bible Society, founded in 1814 in Berlin, is the most important. It has branches in all parts of the country, and distributes about 80,000 Bibles and Testaments yearly. The British and Foreign Bible Society supplies Germany with great quantities of Bibles, numbering over 350,000 annually. Bible Societies were prohibited by the Austrian government in 1817.

Bible societies, though wide in their constitution, are practically Protestant institu-

tions; and on June 29, 1816, a bull denouncing them was launched by Pope Pius VII.

**biblical archeology.** Biblical antiquities; antiquities illustrative of the Bible.

¶ *Society of Biblical Archeology*: A society founded in London on 9th December, 1870, for the investigation of the Archeology, History, Arts, and Chronology of Ancient and Modern Assyria, Palestine, Egypt, Arabia, and other Biblical Lands; the promotion of the study of the Antiquities of those countries, and the Record of Discoveries hereafter to be made in connection therewith." The association has already risen into great power and reputation. It was before this society that Mr. George Smith, on the 3rd December, 1872, read his paper on "The Assyrian Account of the Deluge," translating the celebrated "Deluge Tablet." That evening the attendance at the meeting, then ordinarily about fifty, rose to about 800.

**biblical criticism.** The science which has for its objects (1) to decide which books are entitled to have a place in the Scripture canon (CANON); and (2) to bring the text of these canonical books to the utmost possible degree of purity.

In prosecuting the first of these aims, the Biblical critic must not be confounded with the Christian apologist: the function of the former is a strictly judicial one, whilst the office of the latter is that of an advocate.

One important subject of investigation is as to what Old Testament books were recognised as divine by the ancient Jewish Church or synagogue; as also what New Testament books were at once and universally welcomed by the early Christian Church [HOMOLOGOMENA]; and what others were for a time partially rejected, though they ultimately found acceptance everywhere. [ANTI-LEGOMENA.]

In seeking to purify the text the biblical critic must do much toilsome work in the collation of "codices" or manuscripts. [CONEX.] He does not put the whole of these on one level and admit whatever reading has a majority of MSS. in its favour; but attempts to test the value of each one apart, forming an hypothesis if he can as to when, where, and from whom it emanated, and from what other MSS. it was copied at first, or, in technical language, to what "recension" it belonged. [RECESSION.] Those which he values most for New Testament criticism are the *Codex Sinaiticus*, written probably about the middle of the fourth century; and the *Codex Alexandrinus* and *Codex Vaticanus*, dating, it is believed, from about the middle of the fifth century.

Subjoined is a list of a few of the chief passages in the New Testament on which biblical critics have thrown doubt: Mark xvi. 9—26; John v. 4; viii. 1—11; Acta viii. 37; 1 John v. 7, and perhaps the doxology appended to the Lord's Prayer, "For thine is the kingdom," &c. (Matt. vi. 13). These omissions will not overthrow any theological doctrine held by the Churches.

bib-li-ô-grâph-i-cal-ly, adv. [Eng. *bibliograph* or -ally.] As is done by a bibliographer or in bibliography

bib-li-ôg-raph-y, s. [In Ger. & Fr. *bibliographie*; Sp. & Ital. *bibliografía*; Port. *bibliographia*; Gr. βιβλιογραφία (*bibliographia*) = the writing of books. [*BIBLIOGRAPHER*.] The science or knowledge of books, their authorship, the dates of their first publication, and of the several editions they have gone through, with all other points requisite for literary history. This, it will be perceived, is not the meaning of the word in Greek. (See etym. of *bibliography* and *bibliographer*.) The Greek term generated the French *bibliographie*, with the meaning (identical with neither the Greek nor the English one) of acquaintance with ancient writings and skill in deciphering them. About A.D. 1752 the modern sense of the word was arising, though the old one still held its ground. Finally, in 1763, the publication of De Bure's *Bibliographie Instructive* established the new meaning, and gave the death-blow to the old one. It was not the first book which had appeared on literary history, Conrad Gessner's *Bibliotheca Universalis*, containing a catalogue of all the Hebrew, Greek, and Latin books he knew, had long preceded it, having appeared in 1545. Among the standard works on Bibliography which have been published in Britain may be mentioned Watt's *Bibliotheca Britannica*, in 1824; and Lowndes' *Bibliographer's Manual* in 1834. The Catalogue of the British Museum or of any other library is a bibliographical production; so, also, is every publisher's circular.

"Bibliography is a matter of business, and must be left to private enterprise."—*Letter of J. Whitaker in the Times*, Feb. 27, 1874.

Fervent admiration, carried to the verge of idolatry, for books.

2. A similar feeling towards the Bible.

*Chem. & Phar.*: A name given to the acid carbonates of potassium, sodium, &c., or to hydric sodium carbonate ( $\text{NaHCO}_3$ ), hydric potassium carbonate ( $\text{KHCO}_3$ ), &c. Also to a carbonate dissolved in water containing carbonic acid gas, as carbonate of calcium thus dissolved, reprecipitated on boiling. Bicarbonate of potassium,  $\text{KHCO}_3$ , is obtained by passing  $\text{CO}_2$  gas through a saturated aqueous solution of  $\text{K}_2\text{CO}_3$  (potassium carbonate). It crystallises in colourless rhombic non-deliquescent crystals, which are soluble in four times their weight of water. It does not give a precipitate with  $\text{BaCl}_2$  in the cold. Bicarbonate of potassium is a direct antacid, and is employed in the treatment of acute rheumatism, and for removing uric acid from the system.

**Bicarbonate of sodium**.  $\text{NaHCO}_3$ , hydrogen sodium carbonate, obtained by exposing carbonate of sodium to the action of  $\text{CO}_2$ , carbonic acid gas, which is liberated from limestone by hydrochloric acid; the gas is absorbed by the crystals of the  $\text{Na}_2\text{CO}_3 \cdot 10\text{H}_2\text{O}$ , which lose their water of crystallisation and become opaque. Bicarbonate of sodium is used as an antacid; it is supposed to influence the secretions of the liver, and not to produce nausea like the potassium salt. It is

used in the manufacture of effervescent powders and drinks, which are usually a mixture of this salt with tartaric acid, and also enters into the composition of baking-powders.

Bichloride of mercury occurs in heavy white masses of prismatic crystals; it is soluble in twenty parts of cold water, also in alcohol and ether. (For tests see *MERCURIC*.) It is a very powerful irritant—when taken in large doses it causes vomiting and purging. It is very poisonous; the best antidote is white of egg. 1. To pray, to ask, to entreat.

"Alle he felleo him thor to lot To bethen methe and bedden oa"

[*A.S. beodan*, pret. *bead*, pa. par. *beden* = to command, order, bid, will, offer, enjoy. (*Bosworth.*) In *Icel. bīdja*; *Sw. bīdja* = to bid, to command; *Dan. byde, both* = to offer, to invite; *Dut. bīeden, gebīeden* = to offer, to tender; *Ger. bieten* = to offer, tender, present; *gebieten* = to command, to order; *O.H. (2) Privately: To declare, to pronounce in the domestic circle.

" . . . pray you, *bīd* These unknown friends to welcome."  
*Shaksp.: Wint. Tale, iv. 5.*

¶ Probably an-*b* phrase as "to bid one God speed" (*2 John* 10), and "to bid one farewell" (*Acts* xviii. 21), are a modification of this meaning, though the opinion of *Johnson* is worth consideration that they may mean to pray God that one may speed well, to pray that one may fare well, in which case the verb *bīd* is No. 1, and not No. 2.

4. To offer, to make a tender; to announce what price one is prepared to give for a specified article. (Used especially in connection with auctions.) [*Lit. & Fig.*]

¶ *Bīdding prayer*:  
*Eccles.*: An expression used in pre-Reformation times in the sense of "praying prayers," i.e., praying. In the medieval church the priest was accustomed to read out a list of persons and things for which the prayers of the faithful were requested. In England, in the sixteenth century, this list was replaced by a form acting forth the subjects to be remembered by the people when bidding their beads (that is, saying the rosary, in other words, saying their prayers, or praying).

When the two verbs [*Bio* (1), *Bid* (2)] were popularly confounded the original meaning of the phrase was lost sight of, and *bidding* was taken as an adjective = that enjoins or commands. *Bidding prayer* then came to mean "an exhortation to intercessory prayer," and is so used by some Roman writers (cf. *Rock: Church of Our Fathers*, ii. 354). In the English Church the bidding prayer is an invitation to the people to pray for the Royal Family, Parliament, &c. It is said before the sermon at visitations, assizes, and ordinations, and before the university sermons, and is followed by the Lord's Prayer.

**big-ām-y, \*big-am-ic, s.** [Fr. *bigamie*; Sp., Port., Ital., & Low Lat. *bigamia*.] [*BIOAM.*]

**A. Ordinary Language:**

1. Formerly. (Generally). In the etym. sense: The wedding of two women in succession, marrying twice. [B. I.]

"Which is a plain proof yt concerning ye prohibition of any mo wives then one and the forbidding of bigamy by ye wedding of one wife after another, was the special ordinance of God and not of Saint Paul."—*Sir T. More: Works*, p. 229.

2. Now. (Specially). The marrying of another woman while the first wife is still living, or of a man while the first husband still lives. [B. II.]

"He settled in a third parish, and was taken up for bigamy."—*Macaulay: Hist. Eng.*, ch. xviii.

**B. Law:**

**I. Canon Law:**

1. The marrying of two virgins, one after the other, the sin or crime being held to be committed even if the first had died before the second was wedded.

2. The marrying of a widow.

3. The marrying of a woman who, though not ceremonially wedded, has still allowed some one to have intercourse with her. If bigamy of any of these kinds were committed, the offender could not take holy orders.

**II. Common Law:** The act of marrying a second time, while the first husband or wife is still known to be living. By 5 Edward I., passed in 1276, it was punished with death. In 1603, during the reign of James I., it was made felony, without benefit of clergy. By 35 Geo. III., passed in 1794, the capital penalty was modified into imprisonment or transportation. If a person marry a third wife, while the first two are living, the offence is still called *bigamy*. In the United States bigamy is everywhere treated as crime, punishable by fine and imprisonment, differing in the different states.

¶ *Bigamy* signifies simply a second marriage; *bigamy* implies that such a marriage takes place whilst the first wife is still alive. [*DIOAMY.*]

- big-nô-ni-a**, *s.* [In Fr. *bignone*; Dut. Sp., Port., & Ital. *bignonia*. Named after Abbé Bignon, librarian to Louis XIV., and patron of the botanist Tournefort.]

*Bot.*: A genus of plants, that of the trumpet flowers, constituting the typical one of the order Bignonaceæ or Bignonids. It has four perfect stamens, two long and two short. The species, which are numerous, are nearly all

BIGNONIA.

of an ornamental character, owing to their five large trumpet-like monopetalous corollas, colored red, blue, yellow, or white. They are trees or shrubs, in the latter case often climbing; found in or sometimes even beyond the tropics of both hemispheres, and constituting a feature in the flora of the regions which they inhabit. Many are from the warmer parts of America; India also has various species. One of the latter, the *Bignonia indica*, called in the Bombay presidency *Taetoo*, has supra-decompound leaves, from four to six feet long, panicles of flowers about five to six feet long, and legume-like capsules more than two feet long by three and a half inches broad. Several bignonias have been introduced into the hot-houses and green-houses of this country, and one—the *Bignonia radiicans*—will grow in the open air. It is a beautiful climber with rooting-joints, which enable it to adhere to walls.

- big-nô-ni-a'-çô-së** (R. Brown, Lindley, &c.), *Bignonias* (Jussieu) (both Latin), **big-nô-ni-ädz** (Eng.), *s.* [BIGNONIA.]

*Bot.*: An order of plants, ranked by Dr. Lindley as the type of his Bignonial Alliance. The stamens are five, but always one and sometimes three are abortive, so as to make the species tetradynamous or diandrous plants. The ovary is two or spuriously four-celled and polyspermous. The capsule is two-celled, and sometimes so long as to appear like a legume. The inflorescence, which is terminal, is generally somewhat paniced. The leaves are mostly compound. The bignonids are trees or shrubs, as a rule climbing. They are highly ornamental plants from the tropics of both hemispheres. The known species number about 500.

- big-nô-ni-al**, *a.* [From Low Lat. *bignoniales* = pertaining to the Bignonia (q.v.).]

*Bot.*: Pertaining to the Bignonia genus. *Bignonial Alliance*: An alliance of plants. [BIGNONIALES.]

- † **big-ôn-ët**, *s.* [BIOONET.]

- \* **bi-goon**, *pa. par.* [BEONE.] (Chaucer.)

**big-ët**, *s. & a.* [In Dan. † *bigot* (s); Ger. *bigott* (a); Fr. *bigot* (the modern sense of this word not arising till the fifteenth century); Low Lat. *bigoti*, *pl.* A word for which a superfluity of etymologies have been given. It is deeply rooted only in the English and French tongues. Barbazan, Malone, and Michel consider it a corruption of the word *Visigoth*, which might become *Visigot*, *Bigigot*, *Bigot*, a view which Littré thinks probable. According to an old chronicle quoted by Du Cange, Rollo, the first Duke of Normandy, being required to kiss the foot of King Charles, as having received Neustria in fief, contemptuously replied, "*Ne se Bigot*" = Not so, by God. Hence the king and court nicknamed him Bigoth. Littré, however, thinks it probable that this story was invented to explain the word. Wace, as quoted by Du Cange, says that the French called the Normans *bigoz* or *bigos*. Cotgrave affirms that *bigot* is an old Norman word = for God's sake. Bullokar (ed. 1656) thus defines it: "*Bigot*, an hypocrite; also a scrupulous or superstitious person. The word came into England out of Normandy, where it continues to this day in that sense." Trench derives the word from Sp. *bigote* = a mustachio, and supposes that the people of that nation, wearing on their lips the hirsute appendages now spoken of, while the other nations of Europe had smooth faces, came to be called *bigots*, that is, men of the mustachio. Stauding afterwards as the type of religious intolerance, they so degraded this word *bigot* that it came to have its present meaning. (Trench, *on the Study of Words*, 2nd ed., pp. 80-82.) A number of authors derive *bigot* from the Franciscan tertiaries called *Begutte*, *Bigutte*, *Begulna*, *Beguins*, or in Ital. *Biochi*, the latter-named word being from *bigio* = russet-grey, brown, which was the color of the habit they wore. To this view Wedgwood assents, while Skeat considers that Wace's statement given above indicates the correct etymology. He believes *bigoz* or *bigos* to be of Scandinavian origin, though its modern signification has come from its application to the Begulus or Begutte.] [BEIGIN, BEGUTÆ.]

It is especially used of the *Vaccinium Myrtillus*, called also the Whortleberry. **A. As substantive:**

1. *Physiol. & Ord. Lang.*: An animal fluid secreted by the liver. It is made from venous and not from arterial blood. It is a viscid transparent liquid of a very deep yellow or greenish colour, darkening by exposure to the air. Its odour is disagreeable; its taste nauseous and bitter. It has an alkaline reaction. *Strecker* has shown that it is essentially a mixture of two acids, the glycolic and the taurocholic acid, the first containing nitrogen without sulphur, and the latter having both. The principal colouring matter of the bile is called *bilirubin* or *cholepyrrhin*. In 1,000 parts it contains—

Water	...	from 823 to 908 parts.
Solid matter	...	" 177 to 92 "
Bile-acids with alkali	...	" 108 to 56 "
Fat and cholesterolin	...	" 47 to 40 "
Mucus and colouring matter	...	" 24 to 15 "
Ash	...	" 11 to 6 "

When the bile is elaborated in the liver, it is received from the secreting vessels by very minute tubes, which unite form the hepatic duct. The bile is conveyed into the gall-bladder by means of the cystic, or into the duodenum by the choledoch duct; that which makes its way into the former receptacle is called the *cystic bile*, and that which enters the latter the *hepatic bile*. *Cystic bile* is deeper in colour and more viscid, pungent, and bitter than *hepatic bile*. One main use of bile is to convert chyme into chyle as one step in the process of digestion.

"In its progression, soon the labour'd chyle  
Receives the confluent rills of bitter bile;  
Which, by the liver sever'd from the blood,  
And striv'g through the gall pipe, herz unload  
Their yellow streams."
